### **Understanding Embedded - DSP (Digital Signal Processors)**

[Embedded - DSP \(Digital Signal Processors\)](#) are specialized microprocessors designed to perform complex mathematical computations on digital signals in real-time. Unlike general-purpose processors, DSPs are optimized for high-speed numeric processing tasks, making them ideal for applications that require efficient and precise manipulation of digital data. These processors are fundamental in converting and processing signals in various forms, including audio, video, and communication signals, ensuring that data is accurately interpreted and utilized in embedded systems.

### **Applications of Embedded - DSP (Digital Signal Processors)**

#### **Details**

|                         |   |
|-------------------------|---|
| Product Status          | Active  |
| Type                    | Audio Processor   |
| Interface               | Host Interface, I <sup>2</sup> C, SAI, SPI  |
| Clock Rate              | 150MHz  |
| Non-Volatile Memory     | ROM (84kB)  |
| On-Chip RAM             | 54kB  |
| Voltage - I/O           | 3.30V   |
| Voltage - Core          | 1.25V   |
| Operating Temperature   | 0°C ~ 70°C (TA)   |
| Mounting Type           | Surface Mount   |
| Package / Case          | 52-LQFP   |
| Supplier Device Package | 52-TQFP (10x10)   |
| Purchase URL            | <a href="https://www.e-xfl.com/pro/item?MUrl=&amp;PartUrl=dspb56374ae">https://www.e-xfl.com/pro/item?MUrl=&amp;PartUrl=dspb56374ae</a> |

- Hardware Watchdog Timer

## 2.4 Packages

80-pin and 52-pin plastic LQFP packages.

## 3 Documentation

Table 2 lists the documents that provide a complete description of the DSP56374 and are required to design properly with the part. Documentation is available from a local Freescale Semiconductor, Inc. (formerly Motorola) distributor, semiconductor sales office, Literature Distribution Center, or through the Freescale DSP home page on the Internet (the source for the latest information).

**Table 2. DSP56374 Documentation**

| Document Name                 | Description   | Order Number  |
|-------------------------------|---|---------------|
| DSP56300 Family Manual        | Detailed description of the 56300-family architecture and the 24-bit core processor and instruction set | DSP56300FM/AD |
| DSP56374 User's Manual        | Detailed description of memory, peripherals, and interfaces   | DSP56374UM/D  |
| DSP56374 Technical Data Sheet | Electrical and timing specifications; pin and package descriptions                                      | DSP56374      |
| DSP56374 Product Brief        | Brief description of the chip   | DSP56374PB/D  |

## 4 Signal Groupings

The input and output signals of the DSP56374 are organized into functional groups, which are listed in Table 3.

The DSP56374 is operated from a 1.25 V and 3.3 V supply; however, some of the inputs can tolerate 5.0 V. A special notice for this feature is added to the signal descriptions of those inputs.

**Table 3. DSP56374 Functional Signal Groupings**

| Functional Group           | Number of Signals <sup>1</sup> | Detailed Description |          |
|----------------------------|--------------------------------|----------------------|----------|
| Power (V <sub>DD</sub> )   | 11                             | Table 15             |          |
| Ground (GND)               | 9                              | Table 5              |          |
| Scan Pins                  | 1                              | Table 6              |          |
| Clock and PLL              | 3                              | Table 7              |          |
| Interrupt and mode control | Port H <sup>2</sup>            | 5                    | Table 8  |
| SHI                        | Port H <sup>2</sup>            | 5                    | Table 9  |
| ESAI                       | Port C <sup>4</sup>            | 12                   | Table 10 |
| ESAI_1                     | Port E <sup>5</sup>            | 12                   | Table 11 |

**Table 9. Serial Host Interface Signals**

| Signal Name | Signal Type                | State during Reset | Signal Description  |
|-------------|----------------------------|--------------------|---|
| SCK         | Input or output            | Tri-stated         | SPI Serial Clock—The SCK signal is an output when the SPI is configured as a master and a Schmitt-trigger input when the SPI is configured as a slave. When the SPI is configured as a master, the SCK signal is derived from the internal SHI clock generator. When the SPI is configured as a slave, the SCK signal is an input, and the clock signal from the external master synchronizes the data transfer. The SCK signal is ignored by the SPI if it is defined as a slave and the slave select ( $\overline{SS}$ ) signal is not asserted. In both the master and slave SPI devices, data is shifted on one edge of the SCK signal and is sampled on the opposite edge where data is stable. Edge polarity is determined by the SPI transfer protocol.  |
| SCL         | Input or output            | Tri-stated         | <p>I<sup>2</sup>C Serial Clock—SCL carries the clock for I<sup>2</sup>C bus transactions in the I<sup>2</sup>C mode. SCL is a Schmitt-trigger input when configured as a slave and an open-drain output when configured as a master. SCL should be connected to V<sub>DD</sub> through an external pull-up resistor according to the I<sup>2</sup>C specifications.</p> <p>This signal is tri-stated during hardware, software, and individual reset.</p> <p>This pin has an internal pull up resistor.<br/>This input is 5 V tolerant.</p>   |
| MISO        | Input or output            | Tri-stated         | SPI Master-In-Slave-Out—When the SPI is configured as a master, MISO is the master data input line. The MISO signal is used in conjunction with the MOSI signal for transmitting and receiving serial data. This signal is a Schmitt-trigger input when configured for the SPI Master mode, an output when configured for the SPI Slave mode, and tri-stated if configured for the SPI Slave mode when $\overline{SS}$ is de-asserted. An external pull-up resistor is not required for SPI operation.  |
| SDA         | Input or open-drain output | Tri-stated         | <p>I<sup>2</sup>C Data and Acknowledge—In I<sup>2</sup>C mode, SDA is a Schmitt-trigger input when receiving and an open-drain output when transmitting. SDA should be connected to V<sub>DD</sub> through a pull-up resistor. SDA carries the data for I<sup>2</sup>C transactions. The data in SDA must be stable during the high period of SCL. The data in SDA is only allowed to change when SCL is low. When the bus is free, SDA is high. The SDA line is only allowed to change during the time SCL is high in the case of start and stop events. A high-to-low transition of the SDA line while SCL is high is a unique situation, and is defined as the start event. A low-to-high transition of SDA while SCL is high is a unique situation defined as the stop event.</p> <p>This signal is tri-stated during hardware, software, and individual reset. Thus, there is no need for an external pull-up in this state.</p> <p>This pin has an internal pull up resistor.<br/>This input is 5 V tolerant.</p> |

**Table 10. Enhanced Serial Audio Interface Signals (continued)**

| Signal Name | Signal Type                    | State during Reset | Signal Description   |
|-------------|--------------------------------|--------------------|--|
| FSR         | Input or output                | GPIO disconnected  | <p>Frame Sync for Receiver—This is the receiver frame sync input/output signal. In the asynchronous mode (SYN=0), the FSR pin operates as the frame sync input or output used by all the enabled receivers. In the synchronous mode (SYN=1), it operates as either the serial flag 1 pin (TEBE=0), or as the transmitter external buffer enable control (TEBE=1, RFSD=1).</p> <p>When this pin is configured as serial flag pin, its direction is determined by the RFSD bit in the RCCR register. When configured as the output flag OF1, this pin will reflect the value of the OF1 bit in the SAICR register, and the data in the OF1 bit will show up at the pin synchronized to the frame sync in normal mode or the slot in network mode. When configured as the input flag IF1, the data value at the pin will be stored in the IF1 bit in the SAISR register, synchronized by the frame sync in normal mode or the slot in network mode.</p> |
| PC1         | Input, output, or disconnected | GPIO disconnected  | <p>Port C1—When the ESAI is configured as GPIO, this signal is individually programmable as input, output, or internally disconnected.</p> <p>The default state after reset is GPIO disconnected.</p> <p>Internal Pull down resistor.<br/>This input is 5 V tolerant.</p>  |
| FST         | Input or output                | GPIO disconnected  | <p>Frame Sync for Transmitter—This is the transmitter frame sync input/output signal. For synchronous mode, this signal is the frame sync for both transmitters and receivers. For asynchronous mode, FST is the frame sync for the transmitters only. The direction is determined by the transmitter frame sync direction (TFSD) bit in the ESAI transmit clock control register (TCCR).</p>  |
| PC4         | Input, output, or disconnected | GPIO disconnected  | <p>Port C4—When the ESAI is configured as GPIO, this signal is individually programmable as input, output, or internally disconnected.</p> <p>The default state after reset is GPIO disconnected.</p> <p>Internal Pull down resistor.<br/>This input is 5 V tolerant.</p>  |

**Table 10. Enhanced Serial Audio Interface Signals (continued)**

| Signal Name | Signal Type                    | State during Reset | Signal Description   |
|-------------|--------------------------------|--------------------|--|
| SDO2        | Output                         | GPIO disconnected  | Serial Data Output 2—When programmed as a transmitter, SDO2 is used to transmit data from the TX2 serial transmit shift register   |
| SDI3        | Input                          |                    | Serial Data Input 3—When programmed as a receiver, SDI3 is used to receive serial data into the RX3 serial receive shift register.   |
| PC9         | Input, output, or disconnected |                    | Port C9—When the ESAI is configured as GPIO, this signal is individually programmable as input, output, or internally disconnected.<br><br>The default state after reset is GPIO disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant.  |
| SDO1        | Output                         | GPIO disconnected  | Serial Data Output 1—SDO1 is used to transmit data from the TX1 serial transmit shift register.  |
| PC10        | Input, output, or disconnected |                    | Port C10—When the ESAI is configured as GPIO, this signal is individually programmable as input, output, or internally disconnected.<br><br>The default state after reset is GPIO disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant. |
| SDO0        | Output                         | GPIO disconnected  | Serial Data Output 0—SDO0 is used to transmit data from the TX0 serial transmit shift register.  |
| PC11        | Input, output, or disconnected |                    | Port C11—When the ESAI is configured as GPIO, this signal is individually programmable as input, output, or internally disconnected.<br><br>The default state after reset is GPIO disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant. |

## 4.8 Enhanced Serial Audio Interface\_1

Table 11. Enhanced Serial Audio Interface\_1 Signals

| Signal Name | Signal Type                    | State during Reset | Signal Description   |
|-------------|--------------------------------|--------------------|--|
| HCKR_1      | Input or output                | GPIO disconnected  | High Frequency Clock for Receiver—When programmed as an input, this signal provides a high frequency clock source for the ESAI_1 receiver as an alternate to the DSP core clock. When programmed as an output, this signal can serve as a high-frequency sample clock (e.g., for external digital to analog converters [DACs]) or as an additional system clock. |
| PE2         | Input, output, or disconnected |                    | <p>Port E2—When the ESAI_1 is configured as GPIO, this signal is individually programmable as input, output, or internally disconnected.</p> <p>The default state after reset is GPIO disconnected.</p> <p>Internal Pull down resistor.<br/>This input is 5 V tolerant.</p>  |
| HCKT_1      | Input or output                | GPIO disconnected  | High Frequency Clock for Transmitter—When programmed as an input, this signal provides a high frequency clock source for the ESAI_1 transmitter as an alternate to the DSP core clock. When programmed as an output, this signal can serve as a high frequency sample clock (e.g., for external DACs) or as an additional system clock.                          |
| PE5         | Input, output, or disconnected |                    | <p>Port E5—When the ESAI_1 is configured as GPIO, this signal is individually programmable as input, output, or internally disconnected.</p> <p>The default state after reset is GPIO disconnected.</p> <p>Internal Pull down resistor.<br/>This input is 5 V tolerant.</p>  |

**Table 11. Enhanced Serial Audio Interface\_1 Signals (continued)**

| Signal Name | Signal Type                    | State during Reset | Signal Description  |
|-------------|--------------------------------|--------------------|---|
| SDO5_1      | Output                         | GPIO disconnected  | Serial Data Output 5_1—When programmed as a transmitter, SDO5_1 is used to transmit data from the TX5 serial transmit shift register.   |
| SDI0_1      | Input                          |                    | Serial Data Input 0_1—When programmed as a receiver, SDI0_1 is used to receive serial data into the RX0 serial receive shift register.  |
| PE6         | Input, output, or disconnected |                    | Port E6—When the ESAI_1 is configured as GPIO, this signal is individually programmable as input, output, or internally disconnected.<br><br>The default state after reset is GPIO disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant  |
| SDO4_1      | Output                         | GPIO disconnected  | Serial Data Output 4_1—When programmed as a transmitter, SDO4_1 is used to transmit data from the TX4 serial transmit shift register.   |
| SDI1_1      | Input                          |                    | Serial Data Input 1_1—When programmed as a receiver, SDI1_1 is used to receive serial data into the RX1 serial receive shift register.  |
| PE7         | Input, output, or disconnected |                    | Port E7—When the ESAI_1 is configured as GPIO, this signal is individually programmable as input, output, or internally disconnected.<br><br>The default state after reset is GPIO disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant. |
| SDO3_1      | Output                         | GPIO disconnected  | <b>Serial Data Output 3</b> —When programmed as a transmitter, SDO3_1 is used to transmit data from the TX3 serial transmit shift register.   |
| SDI2_1      | Input                          |                    | <b>Serial Data Input 2</b> —When programmed as a receiver, SDI2_1 is used to receive serial data into the RX2 serial receive shift register.  |
| PE8         | Input, output, or disconnected |                    | Port E8—When the ESAI is configured as GPIO, this signal is individually programmable as input, output, or internally disconnected.<br><br>The default state after reset is GPIO disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant.   |

## 4.9 Dedicated GPIO-Port G

Table 12. Dedicated GPIO-Port G Signals

| Signal Name | Type                           | State During Reset | Signal Description   |
|-------------|--------------------------------|--------------------|--|
| PG0         | Input, output, or disconnected | GPIO disconnected  | Port G0—This signal is individually programmable as input, output, or internally disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant |
| PG1         | Input, output, or disconnected | GPIO disconnected  | Port G1—This signal is individually programmable as input, output, or internally disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant |
| PG2         | Input, output, or disconnected | GPIO disconnected  | Port G2—This signal is individually programmable as input, output, or internally disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant |
| PG3         | Input, output, or disconnected | GPIO disconnected  | Port G3—This signal is individually programmable as input, output, or internally disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant |
| PG4         | Input, output, or disconnected | GPIO disconnected  | Port G4—This signal is individually programmable as input, output, or internally disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant |
| PG5         | Input, output, or disconnected | GPIO disconnected  | Port G5—This signal is individually programmable as input, output, or internally disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant |
| PG6         | Input, output, or disconnected | GPIO disconnected  | Port G6—This signal is individually programmable as input, output, or internally disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant |
| PG7         | Input, output, or disconnected | GPIO disconnected  | Port G7—This signal is individually programmable as input, output, or internally disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant |
| PG8         | Input, output, or disconnected | GPIO disconnected  | Port G8—This signal is individually programmable as input, output, or internally disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant |

**Table 12. Dedicated GPIO-Port G Signals (continued)**

| Signal Name | Type                           | State During Reset | Signal Description  |
|-------------|--------------------------------|--------------------|---|
| PG9         | Input, output, or disconnected | GPIO disconnected  | Port G9—This signal is individually programmable as input, output, or internally disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant  |
| PG10        | Input, output, or disconnected | GPIO disconnected  | Port G10—This signal is individually programmable as input, output, or internally disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant |
| PG11        | Input, output, or disconnected | GPIO disconnected  | Port G11—This signal is individually programmable as input, output, or internally disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant |
| PG12        | Input, output, or disconnected | GPIO disconnected  | Port G12—This signal is individually programmable as input, output, or internally disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant |
| PG13        | Input, output, or disconnected | GPIO disconnected  | Port G13—This signal is individually programmable as input, output, or internally disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant |
| PG14        | Input, output, or disconnected | GPIO disconnected  | Port G14—This signal is individually programmable as input, output, or internally disconnected.<br><br>Internal Pull down resistor.<br>This input is 5 V tolerant |

## 4.10 Timer

**Table 13. Timer Signal**

| Signal Name | Type            | State during Reset    | Signal Description  |
|-------------|-----------------|-----------------------|---|
| TIO0        | Input or Output | GPIO Input            | <p>Timer 0 Schmitt-Trigger Input/Output—When timer 0 functions as an external event counter or in measurement mode, TIO0 is used as input. When timer 0 functions in watchdog, timer, or pulse modulation mode, TIO0 is used as output.</p> <p>The default mode after reset is GPIO input. This can be changed to output or configured as a timer input/output through the timer 0 control/status register (TCSR0). If TIO0 is not being used, it is recommended to either define it as GPIO output immediately at the beginning of operation or leave it defined as GPIO input.</p> <p>Internal Pull down resistor.<br/>This input is 5 V tolerant</p> |
| TIO1        | Input or Output | Watchdog Timer Output | <p>Timer 1 Schmitt-Trigger Input/Output—When timer 1 functions as an external event counter or in measurement mode, TIO1 is used as input. When timer 1 functions in watchdog, timer, or pulse modulation mode, TIO1 is used as output.</p> <p>The default mode after reset is GPIO input. This can be changed to output or configured as a timer input/output through the timer 1 control/status register (TCSR1). If TIO1 is not being used, it is recommended to either define it as GPIO output immediately at the beginning of operation or leave it defined as GPIO input.</p>  |
| WDT         | Output          |                       | <p>WDT—When this pin is configured as a hardware watchdog timer pin, this signal is asserted low when the hardware watchdog timer counts down to zero.</p> <p>Internal Pull down resistor.<br/>This input is 5 V tolerant</p>   |
| TIO2        | Input or Output | PLOCK Output          | <p>Timer 2 Schmitt-Trigger Input/Output—When timer 2 functions as an external event counter or in measurement mode, TIO2 is used as input. When timer 2 functions in watchdog, timer, or pulse modulation mode, TIO2 is used as output.</p> <p>The default mode after reset is GPIO input. This can be changed to output or configured as a timer input/output through the timer control/status register (TCSR2). If TIO2 is not being used, it is recommended to either define it as GPIO output immediately at the beginning of operation or leave it defined as GPIO input .</p>   |

Table 13. Timer Signal (continued)

| Signal Name | Type   | State during Reset | Signal Description  |
|-------------|--------|--------------------|---|
| PLOCK       | Output |                    | <p>PLOCK—When this pin is configured as a PLL lock pin, this signal is asserted high when the on-chip PLL enabled and locked and de-asserted when the PLL enabled and unlocked. This pin is also asserted high when the PLL is disabled.</p> <p>Internal Pull down resistor.<br/>This input is 5 V tolerant</p> |

## 4.11 JTAG/OnCE Interface

Table 14. JTAG/OnCE Interface

| Signal Name | Signal Type | State during Reset | Signal Description  |
|-------------|-------------|--------------------|---|
| TCK         | Input       | Input              | <p>Test Clock—TCK is a test clock input signal used to synchronize the JTAG test logic.</p> <p>Internal Pull up resistor.<br/>This input is 5 V tolerant.</p>   |
| TDI         | Input       | Input              | <p>Test Data Input—TDI is a test data serial input signal used for test instructions and data. TDI is sampled on the rising edge of TCK.</p> <p>Internal Pull up resistor.<br/>This input is 5 V tolerant.</p>                          |
| TDO         | Output      | Tri-stated         | <p>Test Data Output—TDO is a test data serial output signal used for test instructions and data. TDO is tri-statable and is actively driven in the shift-IR and shift-DR controller states. TDO changes on the falling edge of TCK.</p> |
| TMS         | Input       | Input              | <p>Test Mode Select—TMS is an input signal used to sequence the test controller's state machine. TMS is sampled on the rising edge of TCK.</p> <p>Internal Pull up resistor.<br/>This input is 5 V tolerant.</p>                        |

## 5 Maximum Ratings

### CAUTION

This device contains circuitry protecting against damage due to high static voltage or electrical fields. However, normal precautions should be taken to avoid exceeding maximum voltage ratings. Reliability of operation is enhanced if unused inputs are pulled to an appropriate logic voltage level (e.g., either GND or  $V_{DD}$ ). The suggested value for a pullup or pulldown resistor is 4.7 k $\Omega$ .

## 8 DC Electrical Characteristics

Table 17. DC Electrical Characteristics

| Characteristics   | Symbol     | Min  | Typ  | Max              | Unit    |
|---|------------|------|------|------------------|---------|
| Supply voltages <ul style="list-style-type: none"> <li>Core (Core_VDD)</li> <li>PLL (PLL_VDD)</li> </ul>  | $V_{DD}$   | 1.2  | 1.25 | 1.3              | V       |
| Supply voltages <ul style="list-style-type: none"> <li>I/O (IO_VDD)</li> <li>PLL (PLL_VDD)</li> <li>PLL (PLLA_VDD)</li> </ul>   | $V_{DDIO}$ | 3.14 | 3.3  | 3.46             | V       |

| <b>Note:</b> <p><sup>1</sup> The Current Consumption section provides a formula to compute the estimated current requirements in Normal mode. In order to obtain these results, all inputs must be terminated (i.e., not allowed to float). Measurements are based on synthetic intensive DSP benchmarks. The power consumption numbers in this specification are 90% of the measured results of this benchmark. This reflects typical DSP applications. Typical internal supply current is measured with <math>V_{CORE\_VDD} = 1.25V</math>, <math>V_{DD\_IO} = 3.3V</math> at <math>T_J = 25^\circ C</math>. Maximum internal supply current is measured with <math>V_{CORE\_VDD} = 1.30V</math>, <math>V_{IO\_VDD} = 3.46V</math> at <math>T_J = 115^\circ C</math>.</p> <p><sup>2</sup> In order to obtain these results, all inputs, which are not disconnected at Stop mode, must be terminated (i.e., not allowed to float).</p> |            |      |      |                  |         |

**Table 19. Clock Operation (continued)**

| No.  | Characteristics | Symbol | Min | Max | Units |
|--|-----------------|--------|-----|-----|-------|
| <p><b>Note:</b></p> <p><sup>1</sup> Measured at 50% of the input transition.</p> <p><sup>2</sup> The indicated duty cycle is for the specified maximum frequency for which a part is rated. The minimum clock high or low time required for correct operation, however, remains the same at lower operating frequencies; therefore, when a lower clock frequency is used, the signal symmetry may vary from the specified duty cycle as long as the minimum high time and low time requirements are met.</p> <p><sup>3</sup> A valid clock signal must be applied to the EXTAL pin within 3 ms of the DSP56374 being powered up.</p> |                 |        |     |     |       |

**Table 20. Reset, Stop, Mode Select, and Interrupt Timing (continued)**

| No. | Characteristics                                      | Expression      | Min | Max  | Unit |
|-----|--|-----------------|-----|------|------|
| 21  | Interrupt Requests Rate <sup>1</sup>                 |                 |     |      |      |
|     | • ESAI, ESAI_1, SHI, Timer                           | $12 \times T_C$ | —   | 80.0 | ns   |
|     | • DMA  | $8 \times T_C$  | —   | 53.0 | ns   |
|     | • $\overline{IRQ}$ , $\overline{NMI}$ (edge trigger) | $8 \times T_C$  | —   | 53.0 | ns   |
|     | • $\overline{IRQ}$ (level trigger)                   | $12 \times T_C$ | —   | 80.0 | ns   |
| 22  | DMA Requests Rate                                    |                 |     |      |      |
|     | • Data read from ESAI, ESAI_1, SHI                   | $6 \times T_C$  | —   | 40.0 | ns   |
|     | • Data write to ESAI, ESAI_1, SHI                    | $7 \times T_C$  | —   | 46.7 | ns   |
|     | • Timer  | $2 \times T_C$  | —   | 13.4 | ns   |
|     | • $\overline{IRQ}$ , $\overline{NMI}$ (edge trigger) | $3 \times T_C$  | —   | 20.0 | ns   |

**Note:**

<sup>1</sup> When using fast interrupts and  $\overline{IRQA}$ ,  $\overline{IRQB}$ ,  $\overline{IRQC}$ , and  $\overline{IRQD}$  are defined as level-sensitive, timings 19 through 21 apply to prevent multiple interrupt service. To avoid these timing restrictions, the Edge-triggered mode is recommended when using fast interrupts. Long interrupts are recommended when using Level-sensitive mode.

<sup>2</sup> For PLL disable, using external clock (PCTL Bit 16 = 1), no stabilization delay is required and recovery time will be defined by the OMR Bit 6 settings.

For PLL enable, (if bit 12 of the PCTL register is 0), the PLL is shutdown during Stop. Recovering from Stop requires the PLL to get locked. The PLL lock procedure duration, PLL Lock Cycles (PLC), may be in the range of 0.5 ms.

<sup>3</sup> Periodically sampled and not 100% tested.

<sup>4</sup>  $\overline{RESET}$  duration is measured during the time in which  $\overline{RESET}$  is asserted,  $V_{DD}$  is valid, and the EXTAL input is active and valid. When the  $V_{DD}$  is valid, but the other “required  $\overline{RESET}$  duration” conditions (as specified above) have not been yet met, the device circuitry will be in an uninitialized state that can result in significant power consumption and heat-up. Designs should minimize this state to the shortest possible duration.

## 15 Programming the Serial Clock

The programmed serial clock cycle, T<sub>I<sup>2</sup>CCP</sub>, is specified by the value of the HDM[7:0] and HRS bits of the HCKR (SHI clock control register).

The expression for T<sub>I<sup>2</sup>CCP</sub> is

$$T_{I^2CCP} = [T_C \times 2 \times (HDM[7:0] + 1) \times (7 \times (1 - HRS) + 1)] \quad \text{Eqn. 1}$$

where

- HRS is the prescaler rate select bit. When HRS is cleared, the fixed divide-by-eight prescaler is operational. When HRS is set, the prescaler is bypassed.
- HDM[7:0] are the divider modulus select bits. A divide ratio from 1 to 256 (HDM[7:0] = \$00 to \$FF) may be selected.

In I<sup>2</sup>C mode, the user may select a value for the programmed serial clock cycle from

$$6 \times T_C \text{ (if HDM[7:0] = \$02 and HRS = 1)} \quad \text{Eqn. 2}$$

to

$$4096 \times T_C \text{ (if HDM[7:0] = \$FF and HRS = 0)} \quad \text{Eqn. 3}$$

The programmed serial clock cycle (T<sub>I<sup>2</sup>CCP</sub>) should be chosen in order to achieve the desired SCL serial clock cycle (T<sub>SCL</sub>), as shown in [Table 23](#).

## **How to Reach Us:**

### **Home Page:**

[www.freescale.com](http://www.freescale.com)

### **E-mail:**

[support@freescale.com](mailto:support@freescale.com)

### **USA/Europe or Locations Not Listed:**

Freescale Semiconductor  
Technical Information Center, CH370  
1300 N. Alma School Road  
Chandler, Arizona 85224  
+1-800-521-6274 or +1-480-768-2130  
[support@freescale.com](mailto:support@freescale.com)

### **Europe, Middle East, and Africa:**

Freescale Halbleiter Deutschland GmbH  
Technical Information Center  
Schatzbogen 7  
81829 Muenchen, Germany  
+44 1296 380 456 (English)  
+46 8 52200080 (English)  
+49 89 92103 559 (German)  
+33 1 69 35 48 48 (French)  
[support@freescale.com](mailto:support@freescale.com)

### **Japan:**

Freescale Semiconductor Japan Ltd.  
Headquarters  
ARCO Tower 15F  
1-8-1, Shimo-Meguro, Meguro-ku,  
Tokyo 153-0064  
Japan  
0120 191014 or +81 3 5437 9125  
[support.japan@freescale.com](mailto:support.japan@freescale.com)

### **Asia/Pacific:**

Freescale Semiconductor Hong Kong Ltd.  
Technical Information Center  
2 Dai King Street  
Tai Po Industrial Estate  
Tai Po, N.T., Hong Kong  
+800 2666 8080  
[support.asia@freescale.com](mailto:support.asia@freescale.com)

### **For Literature Requests Only:**

Freescale Semiconductor Literature Distribution Center  
P.O. Box 5405  
Denver, Colorado 80217  
1-800-441-2447 or 303-675-2140  
Fax: 303-675-2150

Information in this document is provided solely to enable system and software implementers to use Freescale Semiconductor products. There are no express or implied copyright licenses granted hereunder to design or fabricate any integrated circuits or integrated circuits based on the information in this document.

Freescale Semiconductor reserves the right to make changes without further notice to any products herein. Freescale Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does Freescale Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation consequential or incidental damages. "Typical" parameters that may be provided in Freescale Semiconductor data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals", must be validated for each customer application by customer's technical experts. Freescale Semiconductor does not convey any license under its patent rights nor the rights of others. Freescale Semiconductor products are not designed, intended, or authorized for use as components in systems intended for surgical implant into the body, or other applications intended to support or sustain life, or for any other application in which the failure of the Freescale Semiconductor product could create a situation where personal injury or death may occur. Should Buyer purchase or use Freescale Semiconductor products for any such unintended or unauthorized application, Buyer shall indemnify and hold Freescale Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that Freescale Semiconductor was negligent regarding the design or manufacture of the part.
