#### What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

**Note 1:** A device's IDD supply current is mainly a function of the operating voltage and frequency. Other factors, such as PBCLK (Peripheral Bus Clock) frequency, number of peripheral modules enabled, internal code execution pattern, execution from Program Flash memory vs. SRAM, I/O pin loading and switching rate, oscillator type, as well as temperature, can have an impact on the current consumption.

- 2:** The test conditions for IDD measurements are as follows:
  - Oscillator mode is EC (for 8 MHz and below) and EC+PLL (for above 8 MHz) with OSC1 driven by external square wave from rail-to-rail, (OSC1 input clock input over/undershoot < 100 mV required)
  - OSC2/CLKO is configured as an I/O input pin
  - USB PLL oscillator is disabled if the USB module is implemented, PBCLK divisor = 1:8
  - CPU, program Flash, and SRAM data memory are operational, program Flash memory Wait states = 7, Program Cache and Prefetch are disabled and SRAM data memory Wait states = 1
  - No peripheral modules are operating (ON bit = 0), but the associated PMD bit is clear
  - WDT, Clock Switching, Fail-Safe Clock Monitor, and Secondary Oscillator are disabled
  - All I/O pins are configured as inputs and pulled to Vss
  - MCLR = VDD
  - CPU executing while(1) statement from Flash
  - RTCC and JTAG are disabled
- 3:** Data in "Typical" column is at 3.3V, 25°C at specified operating frequency unless otherwise stated. Parameters are for design guidance only and are not tested.
- 4:** This parameter is characterized, but not tested in manufacturing.
