### Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

### Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

#### Details

|                                |                                                                                                                                                 |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| Product Status                 | Active                                                                                                                                          |
| Number of LABs/CLBs            | 7911                                                                                                                                            |
| Number of Logic Elements/Cells | 101261                                                                                                                                          |
| Total RAM Bits                 | 4939776                                                                                                                                         |
| Number of I/O                  | 376                                                                                                                                             |
| Number of Gates                | -                                                                                                                                               |
| Voltage - Supply               | 1.14V ~ 1.26V                                                                                                                                   |
| Mounting Type                  | Surface Mount                                                                                                                                   |
| Operating Temperature          | 0°C ~ 85°C (TJ)                                                                                                                                 |
| Package / Case                 | 676-BGA                                                                                                                                         |
| Supplier Device Package        | 676-FBGA (27x27)                                                                                                                                |

Table 3: eFUSE Programming Conditions<sup>(1)</sup>

| Symbol                    | Description                                  | Min  | Typ  | Max  | Units    |
|---------------------------|----------------------------------------------|------|------|------|----------|
| $V_{FS}$ <sup>(2)</sup>   | External voltage supply                      | 3.2  | 3.3  | 3.4  | V        |
| $I_{FS}$                  | $V_{FS}$ supply current                      | –    | –    | 40   | mA       |
| $V_{CCAUX}$               | Auxiliary supply voltage relative to GND     | 3.2  | 3.3  | 3.45 | V        |
| $R_{FUSE}$ <sup>(3)</sup> | External resistor from $R_{FUSE}$ pin to GND | 1129 | 1140 | 1151 | $\Omega$ |
| $V_{CCINT}$               | Internal supply voltage relative to GND      | 1.14 | 1.2  | 1.26 | V        |
| $t_j$                     | Temperature range                            | 15   | –    | 85   | °C       |

**Notes:**

1. These specifications apply during programming of the eFUSE AES key. Programming is only supported through JTAG. The AES key is only supported in the following devices: LX75, LX75T, LX100, LX100T, LX150, and LX150T.
2. When programming eFUSE,  $V_{FS}$  must be less than or equal to  $V_{CCAUX}$ . When not programming or when eFUSE is not used, Xilinx recommends connecting  $V_{FS}$  to GND. However,  $V_{FS}$  can be between GND and 3.45 V.
3. An  $R_{FUSE}$  resistor is required when programming the eFUSE AES key. When not programming or when eFUSE is not used, Xilinx recommends connecting the  $R_{FUSE}$  pin to  $V_{CCAUX}$  or GND. However,  $R_{FUSE}$  can be unconnected.

Table 4: DC Characteristics Over Recommended Operating Conditions

| Symbol               | Description                                                                                                                                    | Min                | Typ | Max | Units    |
|----------------------|------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|-----|-----|----------|
| $V_{DRINT}$          | Data retention $V_{CCINT}$ voltage (below which configuration data might be lost)                                                              | 0.8                | –   | –   | V        |
| $V_{DRAUX}$          | Data retention $V_{CCAUX}$ voltage (below which configuration data might be lost)                                                              | 2.0                | –   | –   | V        |
| $I_{REF}$            | $V_{REF}$ leakage current per pin for commercial (C) and industrial (I) devices                                                                | –10                | –   | 10  | $\mu A$  |
|                      | $V_{REF}$ leakage current per pin for expanded (Q) devices                                                                                     | –15                | –   | 15  | $\mu A$  |
| $I_L$                | Input or output leakage current per pin (sample-tested) for commercial (C) and industrial (I) devices                                          | –10                | –   | 10  | $\mu A$  |
|                      | Input or output leakage current per pin (sample-tested) for expanded (Q) devices                                                               | –15                | –   | 15  | $\mu A$  |
| $I_{HS}$             | Leakage current on pins during hot socketing with FPGA unpowered                                                                               | –20                | –   | 20  | $\mu A$  |
|                      | All pins except PROGRAM_B, DONE, and JTAG pins when HSWAPEN = 1<br>PROGRAM_B, DONE, and JTAG pins, or other pins when HSWAPEN = 0              | $I_{HS} + I_{RPU}$ |     |     | $\mu A$  |
| $C_{IN}^{(1)}$       | Die input capacitance at the pad                                                                                                               | –                  | –   | 10  | pF       |
| $I_{RPU}$            | Pad pull-up (when selected) @ $V_{IN} = 0V$ , $V_{CCO} = 3.3V$ or $V_{CCAUX} = 3.3V$                                                           | 200                | –   | 500 | $\mu A$  |
|                      | Pad pull-up (when selected) @ $V_{IN} = 0V$ , $V_{CCO} = 2.5V$ or $V_{CCAUX} = 2.5V$                                                           | 120                | –   | 350 | $\mu A$  |
|                      | Pad pull-up (when selected) @ $V_{IN} = 0V$ , $V_{CCO} = 1.8V$                                                                                 | 60                 | –   | 200 | $\mu A$  |
|                      | Pad pull-up (when selected) @ $V_{IN} = 0V$ , $V_{CCO} = 1.5V$                                                                                 | 40                 | –   | 150 | $\mu A$  |
|                      | Pad pull-up (when selected) @ $V_{IN} = 0V$ , $V_{CCO} = 1.2V$                                                                                 | 12                 | –   | 100 | $\mu A$  |
| $I_{RPD}$            | Pad pull-down (when selected) @ $V_{IN} = V_{CCO}$ , $V_{CCAUX} = 3.3V$                                                                        | 200                | –   | 550 | $\mu A$  |
|                      | Pad pull-down (when selected) @ $V_{IN} = V_{CCO}$ , $V_{CCAUX} = 2.5V$                                                                        | 140                | –   | 400 | $\mu A$  |
| $I_{BATT}^{(2)}$     | Battery supply current                                                                                                                         | –                  | –   | 150 | nA       |
| $R_{DT}^{(3)}$       | Resistance of optional input differential termination circuit, $V_{CCAUX} = 3.3V$                                                              | –                  | 100 | –   | $\Omega$ |
| $R_{IN\_TERM}^{(5)}$ | Thevenin equivalent resistance of programmable input termination to $V_{CCO}$ (UNTUNED_SPLIT_25) for commercial (C) and industrial (I) devices | 23                 | 25  | 55  | $\Omega$ |
|                      | Thevenin equivalent resistance of programmable input termination to $V_{CCO}$ (UNTUNED_SPLIT_25) for expanded (Q) devices                      | 20                 | 25  | 55  | $\Omega$ |
|                      | Thevenin equivalent resistance of programmable input termination to $V_{CCO}$ (UNTUNED_SPLIT_50) for commercial (C) and industrial (I) devices | 39                 | 50  | 72  | $\Omega$ |
|                      | Thevenin equivalent resistance of programmable input termination to $V_{CCO}$ (UNTUNED_SPLIT_50) for expanded (Q) devices                      | 32                 | 50  | 74  | $\Omega$ |
|                      | Thevenin equivalent resistance of programmable input termination to $V_{CCO}$ (UNTUNED_SPLIT_75) for commercial (C) and industrial (I) devices | 56                 | 75  | 109 | $\Omega$ |
|                      | Thevenin equivalent resistance of programmable input termination to $V_{CCO}$ (UNTUNED_SPLIT_75) for expanded (Q) devices                      | 47                 | 75  | 115 | $\Omega$ |
| $R_{OUT\_TERM}$      | Thevenin equivalent resistance of programmable output termination (UNTUNED_25)                                                                 | 11                 | 25  | 52  | $\Omega$ |
|                      | Thevenin equivalent resistance of programmable output termination (UNTUNED_50)                                                                 | 21                 | 50  | 96  | $\Omega$ |
|                      | Thevenin equivalent resistance of programmable output termination (UNTUNED_75)                                                                 | 29                 | 75  | 145 | $\Omega$ |

**Notes:**

- The  $C_{IN}$  measurement represents the die capacitance at the pad, not including the package.
- Maximum value specified for worst case process at 25°C. LX75, LX75T, LX100, LX100T, LX150, and LX150T only.
- Refer to IBIS models for  $R_{DT}$  variation and for values at  $V_{CCAUX} = 2.5V$ . IBIS values for  $R_{DT}$  are valid for all temperature ranges.
- $V_{CCO2}$  is not required for data retention. The minimum  $V_{CCO2}$  for power-on reset and configuration is 1.65V.
- Termination resistance to a  $V_{CCO}/2$  level.

## Quiescent Current

Typical values for quiescent supply current are specified at nominal voltage, 25°C junction temperatures ( $T_j$ ). Quiescent supply current is specified by speed grade for Spartan-6 devices. Xilinx recommends analyzing static power consumption using the XPOWER™ Estimator (XPE) tool (download at <http://www.xilinx.com/power>) for conditions other than those specified in Table 5.

Table 5: Typical Quiescent Supply Current

| Symbol       | Description                          | Device | Speed Grade |      |      |      | Units |
|--------------|--------------------------------------|--------|-------------|------|------|------|-------|
|              |                                      |        | -3          | -3N  | -2   | -1L  |       |
| $I_{CCINTQ}$ | Quiescent $V_{CCINT}$ supply current | LX4    | 4.0         | 4.0  | 4.0  | 2.4  | mA    |
|              |                                      | LX9    | 4.0         | 4.0  | 4.0  | 2.4  | mA    |
|              |                                      | LX16   | 6.0         | 6.0  | 6.0  | 4.0  | mA    |
|              |                                      | LX25   | 11.0        | 11.0 | 11.0 | 6.6  | mA    |
|              |                                      | LX25T  | 11.0        | 11.0 | 11.0 | N/A  | mA    |
|              |                                      | LX45   | 15.0        | 15.0 | 15.0 | 9.0  | mA    |
|              |                                      | LX45T  | 15.0        | 15.0 | 15.0 | N/A  | mA    |

### Notes:

1. V<sub>CCO</sub> range required when using I/O standard for an output. Also required for MOBILE\_DDR, PCI33\_3, LVC MOS18\_JEDEC, LVC MOS15\_JEDEC, and LVC MOS12\_JEDEC inputs, and for LVC MOS25 inputs when V<sub>CCAUX</sub> = 3.3V.
2. For PCI systems, the transmitter and receiver should have common supplies for V<sub>CCO</sub>.

Table 8: Recommended Operating Conditions for User I/Os Using Differential Signal Standards

| I/O Standard             | V <sub>CCO</sub> for Drivers |        |        |
|--------------------------|------------------------------|--------|--------|
|                          | V, Min                       | V, Nom | V, Max |
| LVDS_33                  | 3.0                          | 3.3    | 3.45   |

**Notes:**

1. LVPECL\_33 and TMDS\_33 maximum V<sub>ICM</sub> is the lower of V (maximum) or V<sub>CCAUX</sub> – (V<sub>ID</sub>/2)
2. When V<sub>CCAUX</sub> = 3.3V, the DCD can be higher than 5% for V<sub>ICM</sub> < 0.7V when using these I/O standards: LVDS\_25, LVDS\_33, BLVDS\_25, LVPECL\_25, LVPECL\_33, RSDS\_25, RSDS\_33, PPDS\_25, and PPDS\_33.
3. The -1L devices require V<sub>CCAUX</sub> = 2.5V when using the LVDS\_25, LVDS\_33, BLVDS\_25, LVPECL\_25, RSDS\_25, RSDS\_33, PPDS\_25, and PPDS\_33 I/O standards on inputs. LVPECL\_33 is not supported in the -1L devices.

**Notes:**

- Using PLL\_RXDIVSEL\_OUT = 1, 2, and 4.
- All jitter values are based on a Bit Error Ratio of 1e<sup>-12</sup>.
- Using 80 MHz sinusoidal jitter only in the absence of deterministic and random jitter.
- Composed of 0.37 UI DJ in the form of ISI and 0.18 UI RJ.
- Measured using PRBS7 data pattern.

## Endpoint Block for PCI Express Designs Switching Characteristics

The Endpoint block for PCI Express is available in the Spartan-6 LXT devices. Consult the [Spartan-6 FPGA Integrated Endpoint Block for PCI Express](#) for further information.

Table 24: Maximum Performance for PCI Express Designs

| Symbol                | Description                  | Speed Grade |      |      |     | Units |
|-----------------------|------------------------------|-------------|------|------|-----|-------|
|                       |                              | -3          | -3N  | -2   | -1L |       |
| F <sub>PCIEUSER</sub> | User clock maximum frequency | 62.5        | 62.5 | 62.5 | N/A | MHz   |

## Performance Characteristics

This section provides the performance characteristics of some common functions and designs implemented in Spartan-6 devices. The numbers reported here are worst-case values; they have all been fully characterized. These values are subject to the same guidelines as the [Switching Characteristics, page 19](#).

Table 25: Interface Performances

| Description                                                                                     | I/O Resource             | Clock Buffer | Data Width | Speed Grade |        |     |     | Units |
|-------------------------------------------------------------------------------------------------|--------------------------|--------------|------------|-------------|--------|-----|-----|-------|

### Notes:

1. Refer to [XAPP1064](#), *Source-Synchronous Serialization and Deserialization (up to 1050 Mb/s)* and [UG381](#), *Spartan-6 FPGA SelectIO Resources User Guide*.
2. Refer to [UG388](#), *Spartan-6 FPGA Memory Controller User Guide*.
3. Extended Memory Controller block performance for DDR2 can be achieved using the extended performance  $V_{CCINT}$  range from [Table 2](#).
4. The LX4 device, all devices in the TQG144 and CPG196 packages, and the -3N speed grade do not support a Memory Controller Block.

Table 27: Spartan-6 Device Production Software and Speed Specification Release<sup>(1)</sup> (Cont'd)

| Device     | Speed Grade Designations <sup>(2)</sup> |     |                   |                |
|------------|-----------------------------------------|-----|-------------------|----------------|
|            | -3 <sup>(3)</sup>                       | -3N | -2 <sup>(4)</sup> | -1L            |
| XQ6SLX75   | N/A                                     | N/A | ISE 13.2 v1.19    | ISE 13.2 v1.07 |
| XQ6SLX75T  | ISE 13.2 v1.19                          | N/A | ISE 13.2 v1.19    | N/A            |
| XQ6SLX150  | N/A                                     | N/A | ISE 13.2 v1.19    | ISE 13.2 v1.07 |
| XQ6SLX150T | ISE 13.2 v1.19                          | N/A | ISE 13.2 v1.19    | N/A            |

**Notes:**

1. ISE 13.3 software with v1.20 for -3, -3N, and -2; and v1.08 for -1L speed specification reflects the changes outlined in [XCEN11028: Spartan-6 FPGA Speed File Changes](#).
2. As marked with an N/A, LXT devices and all XA devices are not available with a -1L speed grade; LX4 devices and all XA and XQ devices are not available with a -3N speed grade.
3. Improved -3 specifications reflected in this data sheet require ISE 12.4 software with v1.15 speed specification.
4. Improved -2 specifications reflected in this data sheet require ISE 12.4 software and the *12.4 Speed Files Patch* which contains the v1.17 speed specification available on the [Xilinx Download Center](#).
5. ISE 12.3 software with v1.12 speed specification is available using ISE 12.3 software and the *12.3 Speed Files Patch* available on the [Xilinx Download Center](#).
6. ISE 12.2 software with v1.11 speed specification is available using ISE 12.2 software and the *12.2 Speed Files Patch* available on the [Xilinx Download Center](#).
7. ISE 13.1 software with v1.18 speed specification is available using ISE 13.1 software and the *13.1 Update* available on the [Xilinx Download Center](#). See [XCEN11012: Speed File Change for -3N Devices](#).

## IOB Pad Input/Output/3-State Switching Characteristics

[Table 28](#) (for commercial (XC) Spartan-6 devices) and [Table 29](#) (for Automotive XA Spartan-6 and Defense-grade Spartan-6Q devices) summarizes the values of standard-specific data input delays, output delays terminating at pads (based on standard), and 3-state delays.

- $T_{IOPI}$  is described as the delay from IOB pad through the input buffer to the I-pin of an IOB pad. The delay varies depending on the capability of the SelectIO input buffer.
- $T_{IOOP}$  is described as the delay from the O pin to the IOB pad through the output buffer of an IOB pad. The delay varies depending on the capability of the SelectIO output buffer.
- $T_{IOTP}$  is described as the delay from the T pin to the IOB pad through the output buffer of an IOB pad, when 3-state is disabled. The delay varies depending on the SelectIO capability of the output buffer.

See the TRACE report for further information on delays when using an I/O standard with UNTUNED termination on inputs or outputs.

Table 28: IOB Switching Characteristics for the Commercial (XC) Spartan-6 Devices

| I/O Standard             | T <sub>IOPI</sub> |      |      |                    | T <sub>IOOP</sub> |      |      |                    | T <sub>IOTP</sub> |      |      |                    | Units |
|--------------------------|-------------------|------|------|--------------------|-------------------|------|------|--------------------|-------------------|------|------|--------------------|-------|

**Notes:**

- SSO limits greater than the number of I/O per  $V_{CCO}/GND$  pair (Table 33) indicate No Limit for the given I/O standard. They are provided in this table to calculate limits when using multiple I/O standards in a bank.
- Not available (N/A) indicates that the I/O standard is not available in the given bank.
- When used with the MCB, these signals are exempt from SSO analysis due to the known activity of the MCB switching patterns. SSO performance is validated for all MCB instances. MCB outputs can, in some cases, exceed the SSO limits.

Table 66: Global Clock Input to Output Delay With PLL in System-Synchronous Mode

| Symbol                                                                                                                                | Description                            | Device     | Speed Grade |      |      |      | Units |

**Notes:**

- Listed above are representative values where one global clock input drives one vertical clock line in each accessible column, and where all accessible IOB and CLB flip-flops are clocked by the global clock net.
- PLL output jitter is included in the timing calculation.

Table 78: Duty Cycle Distortion and Clock-Tree Skew (Cont'd)

**Notes:**

- LXT devices are not available with a -1L speed grade. The LX4 is not available in -3N speed grade.
- These parameters represent the worst-case duty cycle distortion observable at the pins of the device using LVDS output buffers. For cases where other I/O standards are used, IBIS can be used to calculate any additional duty cycle distortion that might be caused by asymmetrical rise/fall times.
- The T<sub>CKSKEW</sub> value represents the worst-case clock-tree skew observable between sequential I/O elements. Significantly less clock-tree skew exists for I/O registers that are close to each other and fed by the same or adjacent clock-tree branches. Use the Xilinx FPGA Editor and Timing Analyzer tools to evaluate clock skew specific to your application.
- The T<sub>CKSKEW</sub> is 0.43 ns for the XA6SLX100 device using a -2 speed grade and 0.22 ns for the XC6SLX100 devices using the -2 speed grade.

Table 79: Package Skew

| Symbol               | Description                 | Device | Package <sup>(2)</sup> | Value | Units |

| 06/14/10 | 1.5     | <p>In <a href="#">Table 2</a>, added note 5 and added temperature range to <math>V_{FS}</math> and <math>R_{FUSE}</math>. Removed speed grade delineation, revised <math>I_{RPD}</math> description, and updated note 2 in <a href="#">Table 4</a>. Added note 2 to <a href="#">Table 7</a>. Added <math>DIFF\_MOBILE\_DDR</math> to <a href="#">Table 8</a> and <a href="#">Table 10</a>. Added note 4 to <a href="#">Table 15</a>. Changed minimum <math>DV_{PPIN}</math> in <a href="#">Table 16</a>. Updated <math>F_{GTPDRCLK}</math> in <a href="#">Table 19</a>. Increased maximum <math>T_{LLSKEW}</math> in <a href="#">Table 22</a>. Updated descriptions and added data to <a href="#">Table 23</a>. Removed note 1 and added new data to the Networking Applications section in <a href="#">Table 25</a>. Updated <a href="#">Table 26</a> and <a href="#">Table 27</a> to the data in ISE v12.1 software with speed specification v1.08. In <a href="#">Table 28</a>, added <math>DIFF\_MOBILE\_DDR</math> and updated -4 speed grade data. Updated the maximum I/O pairs per bank in <a href="#">Table 33</a>. Updated note 2 on <a href="#">Table 39</a>. Revised the <math>F_{MAX}</math> in <a href="#">Table 44</a>. In <a href="#">Table 47</a>, updated description for <math>T_{SMCKCSO}</math>, revised values for <math>T_{POR}</math> and added Min value, added <math>T_{BPIICCK}</math> and <math>T_{SPIICCK}</math>. Also in <a href="#">Table 47</a>, added device dependencies to <math>F_{SMCKCK}</math> and <math>F_{RBCKCK}</math>. Updated and added data to <a href="#">Table 63</a> through <a href="#">Table 78</a>, and <a href="#">Table 81</a>. In <a href="#">Table 79</a>, added data on the XC6SLX45-FG(G)676 and revised the XC6SLX45T and XC6SLX150T values.</p> <p>The following changes to this specification are addressed in the product change notice <a href="#">XC6SLX45-FG(G)676</a>, <i>MCB Performance and JTAG Revision Code for Spartan-6 LX16 and LX45 FPGAs</i>. In <a href="#">Table 2</a>, revised the <math>V_{CCINT}</math> to add the memory controller block extended performance specifications. In <a href="#">Table 25</a>, changed the standard specifications and added extended performance specifications for the memory controller block and note 2. Added note 4 and updated values in <a href="#">Table 34</a>.</p> |
| 06/24/10 | 1.6     | <p>Production release of XC6SLX45T (-2 and -3 speed grades), XC6SLX16 and XC6SLX45 (-3 speed grade) devices which includes changes to <a href="#">Table 26</a> and <a href="#">Table 27</a> (ISE v12.1 software with speed specification v1.08).</p> <p>Added the -3N speed grade, which designates Spartan-6 devices that do not support MCB functionality. This includes changes to <a href="#">Table 2</a> (note 2), <a href="#">Table 25</a> (note 4), and <a href="#">Switching Characteristics</a> (<a href="#">Table 26</a>).</p> <p>Updated <a href="#">Simultaneously Switching Outputs</a> discussion. Added -3 speed grade values for <math>T_{TAP}</math> and <math>F_{MINCAL}</math> values in <a href="#">Table 39</a>. In <a href="#">Table 40</a>, updated <math>T_{RPW}</math> (-2 and -3 speed grade) values and <math>F_{TOG}</math> (-3 speed grade) values. In <a href="#">Table 48</a>, updated <math>T_{GIO}</math> (-2 and -3 speed grade) values. Updated -3 values in spread spectrum section of <a href="#">Table 57</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 07/16/10 | 1.7     | <p>Production release of specific devices listed in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v12.2 software with speed specification v1.11. Added note 4 advising designers of the patch which contains v1.11. Also updated the -1L speed specification to v1.04. Updated numerous -4 and -1L values. Added -4 <math>T_{TAP}</math> values and <math>F_{MINCAL}</math> to <a href="#">Table 39</a>. Revised <math>T_{CINCK}/T_{CKCIN}</math> in <a href="#">Table 40</a>. In <a href="#">Table 41</a>, revised <math>T_{SHCKO}</math>. In <a href="#">Table 42</a>, revised <math>T_{REQ}</math>. Added new -1L values to <a href="#">Table 47</a>. Added and updated values in <a href="#">Table 79</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 07/26/10 | 1.8     | <p>Production release of XC6SLX25, XC6SLX25T, XC6SLX100 and XC6SLX100T in the specific speed grades listed in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v12.2 software with speed specification v1.11. Added note 7 to <a href="#">Table 2</a> and moved <math>V_{FS}</math> and <math>R_{FUSE}</math> to a new <a href="#">Table 3</a>. Added <math>I_{HS}</math> and note 4 to <a href="#">Table 4</a>. Added note 1 to <a href="#">Table 28</a>. Added and updated SSO limits per <math>V_{CCO}/GND</math> pairs in <a href="#">Table 34</a>. Added note 3 to <a href="#">Table 47</a>. In <a href="#">Table 54</a>, removed -1L specifications for <math>CLKOUT\_PER\_JITT\_DV1/2</math> and revised <math>CLKIN\_CLKFB\_PHASE</math> and <math>CLKOUT\_PHASE\_DLL</math> values. Updated note 3 in both <a href="#">Table 56</a> and <a href="#">Table 57</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 08/23/10 | 1.9     | <p>Updated values for <math>F_{GTPRANGE1}</math>, <math>F_{GTPRANGE2}</math>, and <math>F_{GPLLMIN}</math> in <a href="#">Table 18</a>. Revised -3 and -4 values in <a href="#">Table 21</a>. Removed the -1L speed grade readback support restriction and note 3 in <a href="#">Table 47</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 11/05/10 | 1.10    | <p>Production release of XC6SLX4 and XC6SLX9 in the specific speed grades listed in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v12.3 software with speed specification v1.12 for the -2 speed grade available in the 12.3 <i>Speed Files Patch</i>. Added note 3 advising designers of the patch which contains v1.12.</p> <p>In <a href="#">Table 2</a>, added note 4. In <a href="#">Table 4</a>, added note 2. In <a href="#">Table 10</a>, added notes 2 and 3. In <a href="#">Table 44</a>, added note 2. In <a href="#">Table 47</a>, updated symbol for <math>T_{SMWCKCK}/T_{SMCKCKW}</math>, changed -1L values for <math>T_{USERCCLKH}</math> and <math>T_{USERCCLKL}</math>, and added and revised the modes for <math>F_{MCKCK}</math> and <math>F_{SMCKCK}</math>. In <a href="#">Table 53</a>, redefined and expanded description for <math>CLKIN\_FREQ\_DLL</math> and rewrote note 3. Updated title of <a href="#">Table 58</a>. Also in <a href="#">Table 78</a>, revised <math>T_{DCD\_CLK}</math> for XC6SLX150 and XC6SLX150T. Changed description of <math>T_{PSFD}/T_{PHFD}</math> in <a href="#">Table 71</a>.</p> <p>For the -1L speed grade, updated data sheet to ISE 12.3 software with speed specification v1.05 which revised the values in the following tables: <a href="#">Table 25</a>, <a href="#">Table 28</a>, <a href="#">Table 35</a>, <a href="#">Table 36</a>, <a href="#">Table 37</a>, <a href="#">Table 40</a> through <a href="#">Table 43</a>, <a href="#">Table 48</a> through <a href="#">Table 56</a>, <a href="#">Table 62</a> through <a href="#">Table 78</a>, <a href="#">Table 80</a>, and <a href="#">Table 81</a>. Updated <a href="#">Notice of Disclaimer</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Date     | Version | Description of Revisions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 01/10/11 | 1.11    | <p>Production release of XC6SLX4 and XC6SLX9 in the specific speed grades listed in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v12.4 software with speed specification v1.15 for the -4, -3, -3N, and -2 speed grades. Added note 3 to <a href="#">Table 27</a>. Also updated the -1L speed grade requirements to ISE v12.4 software with speed specification v1.06. Revised -3N definition throughout the document.</p> <p>Added note 4 to <a href="#">Table 2</a> and updated note 5. Added information on <math>V_{CCINT}</math> to note 1 in <a href="#">Table 5</a>. Updated Networking Applications -3 values in <a href="#">Table 25</a> to match improvements made in ISE v12.4. In <a href="#">Table 28</a>, added note 1 and revised the <math>T_{IOTP}</math> values for LVDS_33, LVDS_25, MINI_LVDS_33, MINI_LVDS_25, RSDS_33, RSDS_25, TMDS_33, PPDS_33, and PPDS_25. Added note 3 to <a href="#">Table 55</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 02/11/11 | 1.12    | <p>As described in <a href="#">XCEN11008: Product Discontinuation Notice For Spartan-6 LXT -4 Devices</a>, the -4 speed specifications have been discontinued. As outlined in page 2 of the XCN, designers currently using -4 speed specifications should rerun timing analysis using the new -3 speed specifications before moving to a replacement device.</p> <p>Updated the networking applications section of <a href="#">Table 25</a>. Updated -2 speed specifications throughout document and added note 3 to <a href="#">Table 27</a> advising designers to use the -2 speed specification update (v1.17) with the ISE 12.4 software patch. Added <math>F_{CLKDIV}</math> to <a href="#">Table 37</a> and <a href="#">Table 38</a>. Updated note 2 in <a href="#">Table 39</a>. Updated units for <math>T_{SMCKCSO}</math> and <math>T_{BPICCO}</math> in <a href="#">Table 47</a>. Updated -1L in <a href="#">Table 71</a>. Removed Note 2: <i>Package delay information is available for these device/package combinations. This information can be used to deskew the package</i> from <a href="#">Table 79</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 03/31/11 | 2.0     | <p>Production release of XC6SLX45 in the -1L speed grades listed in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v13.1 software with -1L speed specification v1.06.</p> <p>In <a href="#">Table 39</a>, removed values in the -1L column and added note 3 as IODELAY2 only supports Tap0 for lower-power devices. Updated copyright <a href="#">page 1</a> and <a href="#">Notice of Disclaimer</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 05/20/11 | 2.1     | <p>Production release of XC6SLX100 and XC6SLX150 in the specific speed grades listed in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v13.1 software with -1L speed specification v1.06. Updated <a href="#">Table 27</a> and <a href="#">Note 7</a> with changes per <a href="#">XCEN11012: Speed File Change for -3N Devices</a>. Revised <a href="#">Switching Characteristics</a> section for speed specifications: v1.18 for -3, -3N, and -2; including improvements in <a href="#">Table 73</a> through <a href="#">Table 77</a> and <a href="#">Table 81</a>.</p> <p>Removed <i>Memory Controller Block</i> from the performance heading in <a href="#">Table 2</a> and revised <a href="#">Note 2</a>. In <a href="#">Table 4</a>, added <a href="#">Note 1</a> to <math>C_{IN}</math> and updated the description of <math>R_{IN\_TERM}</math>. Updated <a href="#">Note 1</a> in <a href="#">Table 5</a>. Updated <a href="#">Note 1</a> of <a href="#">Table 7</a>. In <a href="#">Table 25</a>, added and removed -1L specifications, increased the standard performance DDR3 specifications, removed the extended performance DDR3 row and updated <a href="#">Note 3</a> and <a href="#">Note 4</a>. Clarified the introductory information for <a href="#">Table 28</a> and <a href="#">Table 30</a>.</p> <p>In <a href="#">Table 32</a>: Revised <math>V_{MEAS}</math> value for LVCMOS12; revised <math>V_{REF}</math> for LVDS_25, LVDS_33, BLVDS_25, MINI_LVDS_25, MINI_LVDS_33, RSDS_25, and RSDS_33; revised <math>R_{REF}</math> for BLVDS_25 and TMDS_33; and added <a href="#">Note 4</a> and <a href="#">Note 5</a>. Updated <a href="#">Note 2</a> and <a href="#">Note 3</a> in <a href="#">Table 39</a>.</p> <p>In <a href="#">Table 47</a>, revised the values and description of <math>T_{POR}</math> including adding <a href="#">Note 3</a>. Also in <a href="#">Table 47</a>, augmented the description and added specifications for <math>F_{RBCK}</math> and removed XC6SLX4 from <math>F_{MCCK}</math> (maximum frequency, parallel mode (Master SelectMAP/BPI)). Added BUFGMUX to <a href="#">Table 48</a> title. Added <a href="#">Table 50</a>.</p> <p>In <a href="#">Table 52</a>, revised specifications for <math>T_{EXTFVAR}</math> and <math>F_{INJITTER}</math>. In <a href="#">Table 54</a> removed the 5 MHz &lt; CLKIN_FREQ_DLL parameter in the LOCK_DLL description. In both <a href="#">Table 56</a> and <a href="#">Table 57</a>, removed the 5 MHz &lt; <math>F_{CLKIN}</math> parameter in the LOCK_FX description. In <a href="#">Table 58</a>, updated description for PSCLK_FREQ and PSCLK_PULSE.</p> <p>Revised title and symbol of <a href="#">Table 70</a>, added new speed specifications for -1L, and added <a href="#">Note 2</a>. Added <a href="#">Table 71</a>.</p> |
| 07/11/11 | 2.2     | <p>Added the Automotive XA Spartan-6 and Defense-grade Spartan-6Q devices to all appropriate tables while sometimes removing the XC6S nomenclature. Added expanded temperature range (Q) to all appropriate tables. Updated <math>T_{SOL}</math> packages in <a href="#">Table 1</a>. Added <math>R_{OUT\_TERM}</math> to <a href="#">Table 4</a>. Updated <a href="#">Note 2</a> on <a href="#">Table 13</a>.</p> <p>Production release of the XC6SLX4, XC6SLX9, XC6SLX16, XC6SLX25, XC6SLX75, XQ6SLX75, and XQ6SLX150 in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v13.2 software with -1L speed specification v1.07.</p> <p>Production release of the XA6SLX16, XA6SLX25T, XA6SLX45, XA6SLX45T, XQ6SLX75, XQ6SLX75T, XQ6SLX150, and XQ6SLX150T in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v13.2 software with -2 and -3 speed specification v1.19.</p> <p>Added <a href="#">Table 29: IOB Switching Characteristics for the Automotive XA Spartan-6 and the Spartan-6Q Devices(1)</a>. Updated CS(G)484 from CSG484 throughout data sheet. Clarified <a href="#">Note 3</a> in <a href="#">Table 39</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
