### Understanding [Embedded - FPGAs \(Field Programmable Gate Array\)](#)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

### Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

#### Details

|                                |                                                                                                                                             |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| Product Status                 | Active                                                                                                                                      |
| Number of LABs/CLBs            | 11519                                                                                                                                       |
| Number of Logic Elements/Cells | 147443                                                                                                                                      |

| V <sub>BATT</sub> <sup>(11)</sup>     | Battery voltage relative to GND, T <sub>j</sub> = 0°C to +85°C (LX75, LX75T, LX100, LX100T, LX150, and LX150T only) |                                               |                                     | 1.0   | –    | 3.6                    | V     |
| T <sub>j</sub>                        | Junction temperature operating range                                                                                | Commercial (C) range                          |                                     | 0     | –    | 85                     | °C    |
|                                       |                                                                                                                     | Industrial temperature (I) range              |                                     | –40   | –    | 100                    | °C    |
|                                       |                                                                                                                     | Expanded (Q) temperature range                |                                     | –40   | –    | 125                    | °C    |

**Notes:**

- All voltages are relative to ground.
- See *Interface Performances for Memory Interfaces* in Table 25. The extended performance range is specified for designs not using the standard  $V_{CCINT}$  voltage range. The standard  $V_{CCINT}$  voltage range is used for:
  - Designs that do not use an MCB
  - LX4 devices
  - Devices in the TQG144 or CPG196 packages
  - Devices with the -3N speed grade
- Recommended maximum voltage droop for  $V_{CCAUX}$  is 10 mV/ms.
- During configuration, if  $V_{CCO\_2}$  is 1.8V, then  $V_{CCAUX}$  must be 2.5V.
- The -1L devices require  $V_{CCAUX} = 2.5V$  when using the LVDS\_25, LVDS\_33, BLVDS\_25, LVPECL\_25, RSDS\_25, RSDS\_33, PPDS\_25, and PPDS\_33 I/O standards on inputs. LVPECL\_33 is not supported in the -1L devices.
- Configuration data is retained even if  $V_{CCO}$  drops to 0V.
- Includes  $V_{CCO}$  of 1.2V, 1.5V, 1.8V, 2.5V, and 3.3V.
- For PCI systems, the transmitter and receiver should have common supplies for  $V_{CCO}$ .
- Devices with a -1L speed grade do not support Xilinx PCI IP.
- Do not exceed a total of 100 mA per bank.
- $V_{BATT}$  is required to maintain the battery backed RAM (BBR) AES key when  $V_{CCAUX}$  is not applied. Once  $V_{CCAUX}$  is applied,  $V_{BATT}$  can be unconnected. When BBR is not used, Xilinx recommends connecting to  $V_{CCAUX}$  or GND. However,  $V_{BATT}$  can be unconnected.

## Quiescent Current

Typical values for quiescent supply current are specified at nominal voltage, 25°C junction temperatures ( $T_j$ ). Quiescent supply current is specified by speed grade for Spartan-6 devices. Xilinx recommends analyzing static power consumption using the XPOWER™ Estimator (XPE) tool (download at <http://www.xilinx.com/power>) for conditions other than those specified in Table 5.

Table 5: Typical Quiescent Supply Current

| Symbol       | Description                          | Device | Speed Grade |      |      |      | Units |
|--------------|--------------------------------------|--------|-------------|------|------|------|-------|
|              |                                      |        | -3          | -3N  | -2   | -1L  |       |
| $I_{CCINTQ}$ | Quiescent $V_{CCINT}$ supply current | LX4    | 4.0         | 4.0  | 4.0  | 2.4  | mA    |
|              |                                      | LX9    | 4.0         | 4.0  | 4.0  | 2.4  | mA    |
|              |                                      | LX16   | 6.0         | 6.0  | 6.0  | 4.0  | mA    |
|              |                                      | LX25   | 11.0        | 11.0 | 11.0 | 6.6  | mA    |
|              |                                      | LX25T  | 11.0        | 11.0 | 11.0 | N/A  | mA    |

## eFUSE Read Endurance

Table 11 lists the minimum guaranteed number of read cycle operations for Device DNA and for the AES eFUSE key. For more information, see [UG380: Spartan-6 FPGA Configuration User Guide](#).

Table 11: eFUSE Read Endurance

| Symbol     | Description                                                                                                 | Speed Grade |     |    |     | Units (Min) |
|------------|-------------------------------------------------------------------------------------------------------------|-------------|-----|----|-----|-------------|
|            |                                                                                                             | -3          | -3N | -2 | -1L |             |
| DNA_CYCLES | Number of DNA_PORT READ operations or JTAG ISC_DNA read command operations. Unaffected by SHIFT operations. | 30,000,000  |     |    |     | Read Cycles |
| AES_CYCLES | Number of JTAG FUSE_KEY or FUSE_CNTL read command operations. Unaffected by SHIFT operations.               | 30,000,000  |     |    |     | Read Cycles |

## GTP Transceiver Specifications

GTP transceivers are available in the Spartan-6 LXT devices. See [DS160: Spartan-6 Family Overview](#) for more information.

### GTP Transceiver DC Characteristics

Table 12: Absolute Maximum Ratings for GTP Transceivers<sup>(1)</sup>

| Symbol                 | Description                                                                                            | Min  | Max  | Units |
|------------------------|--------------------------------------------------------------------------------------------------------|------|------|-------|
| MGTAVCC                | Analog supply voltage for the GTP transmitter and receiver circuits relative to GND                    | -0.5 | 1.32 | V     |
| MGTAVTTTX              | Analog supply voltage for the GTP transmitter termination circuit relative to GND                      | -0.5 | 1.32 | V     |
| MGTAVTTRX              | Analog supply voltage for the GTP receiver termination circuit relative to GND                         | -0.5 | 1.32 | V     |
| MGTAVCCPLL             | Analog supply voltage for the GTP transmitter and receiver PLL circuits relative to GND                | -0.5 | 1.32 | V     |
| MGTAVTTRCAL            | Analog supply voltage for the resistor calibration circuit of the GTP transceiver bank (top or bottom) | -0.5 | 1.32 | V     |
| V <sub>IN</sub>        | Receiver (RXP/RXN) and Transmitter (TXP/TXN) absolute input voltage                                    | -0.5 | 1.32 | V     |
| V <sub>MGTREFCLK</sub> | Reference clock absolute input voltage                                                                 | -0.5 | 1.32 | V     |

#### Notes:

- Stresses beyond those listed under Absolute Maximum Ratings might cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those listed under Operating Conditions is not implied. Exposure to Absolute Maximum Ratings conditions for extended periods of time might affect device reliability.

Table 13: Recommended Operating Conditions for GTP Transceivers<sup>(1)(2)(3)</sup>

| Symbol      | Description                                                                                            | Min  | Typ  | Max  | Units |
|-------------|--------------------------------------------------------------------------------------------------------|------|------|------|-------|
| MGTAVCC     | Analog supply voltage for the GTP transmitter and receiver circuits relative to GND                    | 1.14 | 1.20 | 1.26 | V     |
| MGTAVTTTX   | Analog supply voltage for the GTP transmitter termination circuit relative to GND                      | 1.14 | 1.20 | 1.26 | V     |
| MGTAVTTRX   | Analog supply voltage for the GTP receiver termination circuit relative to GND                         | 1.14 | 1.20 | 1.26 | V     |
| MGTAVCCPLL  | Analog supply voltage for the GTP transmitter and receiver PLL circuits relative to GND                | 1.14 | 1.20 | 1.26 | V     |
| MGTAVTTRCAL | Analog supply voltage for the resistor calibration circuit of the GTP transceiver bank (top or bottom) | 1.14 | 1.20 | 1.26 | V     |

#### Notes:

- Each voltage listed requires the filter circuit described in [UG386: Spartan-6 FPGA GTP Transceivers User Guide](#).
- Voltages are specified for the temperature range of T<sub>j</sub> = -40°C to +125°C.
- The voltage level of MGTAVCCPLL must not exceed the voltage level of MGTAVCC +10mV. The voltage level of MGTAVCC must not exceed the voltage level of MGTAVCCPLL.

Table 27: Spartan-6 Device Production Software and Speed Specification Release<sup>(1)</sup> (Cont'd)

| Device     | Speed Grade Designations <sup>(2)</sup> |     |                   |                |
|------------|-----------------------------------------|-----|-------------------|----------------|
|            | -3 <sup>(3)</sup>                       | -3N | -2 <sup>(4)</sup> | -1L            |
| XQ6SLX75   | N/A                                     | N/A | ISE 13.2 v1.19    | ISE 13.2 v1.07 |
| XQ6SLX75T  | ISE 13.2 v1.19                          | N/A | ISE 13.2 v1.19    | N/A            |
| XQ6SLX150  | N/A                                     | N/A | ISE 13.2 v1.19    | ISE 13.2 v1.07 |
| XQ6SLX150T | ISE 13.2 v1.19                          | N/A | ISE 13.2 v1.19    | N/A            |

**Notes:**

1. ISE 13.3 software with v1.20 for -3, -3N, and -2; and v1.08 for -1L speed specification reflects the changes outlined in [XCEN11028: Spartan-6 FPGA Speed File Changes](#).
2. As marked with an N/A, LXT devices and all XA devices are not available with a -1L speed grade; LX4 devices and all XA and XQ devices are not available with a -3N speed grade.
3. Improved -3 specifications reflected in this data sheet require ISE 12.4 software with v1.15 speed specification.
4. Improved -2 specifications reflected in this data sheet require ISE 12.4 software and the *12.4 Speed Files Patch* which contains the v1.17 speed specification available on the [Xilinx Download Center](#).
5. ISE 12.3 software with v1.12 speed specification is available using ISE 12.3 software and the *12.3 Speed Files Patch* available on the [Xilinx Download Center](#).
6. ISE 12.2 software with v1.11 speed specification is available using ISE 12.2 software and the *12.2 Speed Files Patch* available on the [Xilinx Download Center](#).
7. ISE 13.1 software with v1.18 speed specification is available using ISE 13.1 software and the *13.1 Update* available on the [Xilinx Download Center](#). See [XCEN11012: Speed File Change for -3N Devices](#).

## IOB Pad Input/Output/3-State Switching Characteristics

[Table 28](#) (for commercial (XC) Spartan-6 devices) and [Table 29](#) (for Automotive XA Spartan-6 and Defense-grade Spartan-6Q devices) summarizes the values of standard-specific data input delays, output delays terminating at pads (based on standard), and 3-state delays.

- $T_{IOPI}$  is described as the delay from IOB pad through the input buffer to the I-pin of an IOB pad. The delay varies depending on the capability of the SelectIO input buffer.
- $T_{IOOP}$  is described as the delay from the O pin to the IOB pad through the output buffer of an IOB pad. The delay varies depending on the capability of the SelectIO output buffer.
- $T_{IOTP}$  is described as the delay from the T pin to the IOB pad through the output buffer of an IOB pad, when 3-state is disabled. The delay varies depending on the SelectIO capability of the output buffer.

See the TRACE report for further information on delays when using an I/O standard with UNTUNED termination on inputs or outputs.

Table 28: IOB Switching Characteristics for the Commercial (XC) Spartan-6 Devices

| I/O Standard             | T <sub>IOPI</sub> |      |      |                    | T <sub>IOOP</sub> |      |      |                    | T <sub>IOTP</sub> |      |      |                    | Units |
|--------------------------|-------------------|------|------|--------------------|-------------------|------|------|--------------------|-------------------|------|------|--------------------|-------|
|                          | Speed Grade       |      |      |                    | Speed Grade       |      |      |                    | Speed Grade       |      |      |                    |       |
|                          | -3                | -3N  | -2   | -1L <sup>(1)</sup> | -3                | -3N  | -2   | -1L <sup>(1)</sup> | -3                | -3N  | -2   | -1L <sup>(1)</sup> |       |
| LVDS_33                  | 1.17              | 1.29 | 1.42 | 1.68               | 1.55              | 1.69 | 1.89 | 2.42               | 3000              | 3000 | 3000 | 3000               | ns    |

**Notes:**

1. The -1L values listed in this table are also applicable to the Spartan-6Q devices.
2. Devices with a -1L speed grade do not support Xilinx PCI IP.

**Notes:**

1.  $C_{REF}$  is the capacitance of the probe, nominally 0 pF.
2. Per PCI specifications.
3. The value given is the differential output voltage.
4. See the *BLVDS Output Termination* section in [UG381](#), *Spartan-6 FPGA SelectIO Resources User Guide*.
5. See the *TMDS\_33 Termination* section in [UG381](#), *Spartan-6 FPGA SelectIO Resources User Guide*.

## Simultaneously Switching Outputs

Due to package electrical parasitics, a given package supports a limited number of simultaneous switching outputs (SSOs) when using fast, high-drive outputs. [Table 33](#) and [Table 34](#) provide guidelines for the recommended maximum allowable number of SSOs. These guidelines describe the maximum number of user I/O pins of an output signal standard that should simultaneously switch in the same direction, while maintaining a safe level of switching noise for that particular signal standard. Meeting these guidelines for the stated test conditions ensures that the FPGA operates free from the adverse effects of GND and power bounce.

For each device/package combination, [Table 33](#) provides the number of equivalent  $V_{CCO}$ /GND pairs per bank. For each output signal standard and drive strength, [Table 34](#) recommends the maximum number of SSOs, switching in the same direction, allowed per  $V_{CCO}$ /GND pair within an I/O bank. The guidelines are categorized by package style, slew rate, and output drive current. The number of SSOs are also specified by I/O bank. Multiply the appropriate numbers from each table to calculate the maximum number of SSOs allowed within an I/O bank. The guidelines assume that all pins within a bank use the same I/O standard. Exceeding these SSO guidelines can result in increased power or GND bounce, degraded signal integrity, or increased system jitter. For a given I/O standard, if the SSO limit per pair in [Table 34](#) is greater than the maximum I/O per pair in [Table 33](#), then there is no SSO limit for the exclusive use of that I/O standard.

The recommended maximum SSO values assume that the FPGA is soldered on a printed circuit board and that the board uses sound design practices. Due to the additional inductance introduced by the socket, the SSO values do not apply for FPGAs mounted in sockets. The SSO values assume that the  $V_{CCAUX}$  is powered at 3.3V. Setting  $V_{CCAUX}$  to 2.5V provides better SSO characteristics. For more detail, see [UG381](#): *Spartan-6 FPGA SelectIO Resources User Guide*.

Table 33: Spartan-6 FPGA V<sub>CCO</sub>/GND Pairs per Bank

| Package  | Devices            | Description                 | Bank 0 | Bank 1 | Bank 2 | Bank 3 | Bank 4 | Bank 5 |
|----------|--------------------|-----------------------------|--------|--------|--------|--------|--------|--------|

**Notes:**

1. Setup and Hold times are measured over worst case conditions (process, voltage, temperature). Setup time is measured relative to the Global Clock input signal using the slowest process, highest temperature, and lowest voltage. Hold time is measured relative to the Global Clock input signal using the fastest process, lowest temperature, and highest voltage. These measurements include DCM CLK0 jitter.
2. IFF = Input Flip-Flop or Latch
3. Use IBIS to determine any duty-cycle distortion incurred using various standards.

Table 73: Global Clock Setup and Hold With DCM in Source-Synchronous Mode

| Symbol                                                                                                | Description                                                                      | Device     | Speed Grade |           |           |           | Units |

**Notes:**

1. Setup and Hold times are measured over worst case conditions (process, voltage, temperature). Setup time is measured relative to the Global Clock input signal using the slowest process, highest temperature, and lowest voltage. Hold time is measured relative to the Global Clock input signal using the fastest process, lowest temperature, and highest voltage. These measurements include DCM CLK0 jitter.
2. IFF = Input Flip-Flop or Latch
3. Use IBIS to determine any duty-cycle distortion incurred using various standards.

Table 77: Global Clock Setup and Hold With DCM and PLL in Source-Synchronous Mode

**Notes:**

- Setup and Hold times are measured over worst case conditions (process, voltage, temperature). Setup time is measured relative to the Global Clock input signal using the slowest process, highest temperature, and lowest voltage. Hold time is measured relative to the Global Clock input signal using the fastest process, lowest temperature, and highest voltage. The timing values were measured using the fine-phase adjustment feature of the DCM. These measurements include CMT jitter; DCM CLK0 driving PLL, PLL CLKOUT0 driving BUFG. Package skew is not included in these measurements.
- IFF = Input Flip-Flop

Table 79: Package Skew (Cont'd)

| Symbol               | Description                 | Device | Package <sup>(2)</sup> | Value | Units |
|----------------------|-----------------------------|--------|------------------------|-------|-------|
| T <sub>PKGSKEW</sub> | Package Skew <sup>(1)</sup> | LX45   | CSG324                 | 70    | ps    |

|                      |                             |        | FG(G)676               | 141   | ps    |
|                      |                             |        | FG(G)900               | 120   | ps    |

**Notes:**

- These values represent the worst-case skew between any two SelectIO resources in the package: shortest delay to longest delay from Pad to Ball.
- Some of the devices are available in both Pb and Pb-free (additional G) packages as standard ordering options. See [DS160: Spartan-6 Family Overview](#) for more information.

Table 80: Sample Window

| Symbol                   | Description                                                 | Device <sup>(1)</sup> | Speed Grade |     |     |     | Units |
|--------------------------|-------------------------------------------------------------|-----------------------|-------------|-----|-----|-----|-------|
|                          |                                                             |                       | -3          | -3N | -2  | -1L |       |
| T <sub>SAMP</sub>        | Sampling Error at Receiver Pins <sup>(2)</sup>              | All                   | 510         | 510 | 530 | 740 | ps    |
| T <sub>SAMP_BUFIO2</sub> | Sampling Error at Receiver Pins using BUFIO2 <sup>(3)</sup> | All                   | 430         | 430 | 450 | 590 | ps    |

**Notes:**

- LXT devices are not available with a -1L speed grade.
- This parameter indicates the total sampling error of Spartan-6 FPGA DDR input registers, measured across voltage, temperature, and process. The characterization methodology uses the DCM to capture the DDR input registers' edges of operation. These measurements include:
  - CLK0 DCM jitter
  - DCM accuracy (phase offset)
  - DCM phase shift resolution
 These measurements do not include package or clock tree skew.
- This parameter indicates the total sampling error of Spartan-6 FPGA DDR input registers, measured across voltage, temperature, and process. The characterization methodology uses the BUFIO2 clock network and IODELAY2 to capture the DDR input registers' edges of operation. These measurements do not include package or clock tree skew.

## Revision History

The following table shows the revision history for this document.

| Date     | Version | Description of Revisions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| 06/24/09 | 1.0     | Initial Xilinx release.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 08/26/09 | 1.1     | Added $V_{FS}$ to <a href="#">Table 1</a> and <a href="#">Table 2</a> . Added $R_{FUSE}$ to <a href="#">Table 2</a> . Added XC6SLX75 and XC6SLX75T to $V_{BATT}$ and $I_{BATT}$ in <a href="#">Table 1</a> , <a href="#">Table 2</a> , and <a href="#">Table 4</a> . Corrected the quiescent supply current for the XC6SLX4 in <a href="#">Table 5</a> . Updated <a href="#">Table 11</a> . Removed $DV_{PPIN}$ from <a href="#">Figure 2</a> . Removed $F_{PCIECORE}$ from <a href="#">Table 24</a> and added values to $F_{PCIEUSER}$ . Added more networking applications to <a href="#">Table 25</a> . Updated values for $T_{SUSPENDLOW\_AWAKE}$ , $T_{SUSPEND\_ENABLE}$ , and $T_{SCP\_AWAKE}$ in <a href="#">Table 46</a> . Numerous changes to <a href="#">Table 47</a> , <a href="#">page 54</a> including the addition of new values to various specifications, revising the $T_{SMCKCSO}$ description, and changing the units of $T_{POR}$ . Also, removed <i>Dynamic Reconfiguration Port (DRP) for DCM and PLL Before and After DCLK</i> section from <a href="#">Table 47</a> and updated all the notes. In <a href="#">Table 52</a> , added to $F_{INMAX}$ , revised $F_{OUTMAX}$ , and removed PLL Maximum Output Frequency for BUFIO2. Revised values for DCM_DELAY_STEP in <a href="#">Table 54</a> . Updated CLKIN_FREQ_FX values in <a href="#">Table 55</a> .                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| 01/04/10 | 1.2     | Added -4 speed grade to entire document. Updated speed specification of -4, -3, -2 speed grades to version 1.03. Added -1L speed grade numbers per speed specification 1.00. Updated $T_{SOL}$ in <a href="#">Table 1</a> . Added -1L rows for LVCMOS12, LVCMOS15, and LVCMOS18 in <a href="#">Table 9</a> . Revised much of the detail in <i>GTP Transceiver Specifications</i> in <a href="#">Table 12</a> through <a href="#">Table 23</a> . Added -2 data to <a href="#">Table 25</a> . Updated $F_{MAX}$ in <a href="#">Table 44</a> . Updated descriptions for $T_{DNACKL}$ and $T_{DNACKH}$ in <a href="#">Table 45</a> and revised values for all parameters. Removed $T_{INITADDR}$ from <a href="#">Table 47</a> and added new data. Updated values in <a href="#">Table 48</a> through <a href="#">Table 62</a> . Added <a href="#">Table 51</a> (BUFPLL) and <a href="#">Table 57</a> (DCM_CLKGEN). Removed $T_{LOCKMAX}$ note from <a href="#">Table 52</a> . Updated note 3 in <a href="#">Table 53</a> . In <a href="#">Table 79</a> : removed XC6SLX75CSG324 and XC6SLX75TCSG324; added XC6SLX75FG(G)484 and XC6SLX75FG(G)484.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 02/22/10 | 1.3     | Production release of XC6SLX16 -2 speed grade devices. The changes to <a href="#">Table 26</a> and <a href="#">Table 27</a> includes updating this data sheet to the data in ISE v11.5 software with speed specification v1.06. Updated maximum of $V_{IN}$ and $V_{TS}$ and note 2 in <a href="#">Table 1</a> . In <a href="#">Table 2</a> , changed $V_{IN}$ , added $I_{IN}$ and note 5, revised notes 1, 6, and 7, and added note 8 to $R_{FUSE}$ . In <a href="#">Table 4</a> , removed previous note 1 and added data to $I_{RPU}$ , $I_{RPD}$ , and $I_{BATT}$ , changed $C_{IN}$ , added $R_{DT}$ and $R_{IN\_TERM}$ , and added note 2 and 3. Updated $V_{CCO2}$ in <a href="#">Table 6</a> . Added <a href="#">Table 7</a> and <a href="#">Table 8</a> . Removed PCI66_3 from <a href="#">Table 9</a> . Updated PCI33_3 and I2C in <a href="#">Table 9</a> . Updated the description of <a href="#">Table 11</a> . Completely updated <a href="#">Table 25</a> . Updated <a href="#">Table 28</a> including adding values for PCI33_3. Updated $V_{REF}$ value for HSTL_III_18 in <a href="#">Table 31</a> . Updates missing $V_{REF}$ values in <a href="#">Table 32</a> . Added <i>Simultaneously Switching Outputs</i> , <a href="#">page 36</a> . Removed $T_{GSRQ}$ and $T_{RPW}$ from <a href="#">Table 35</a> and <a href="#">Table 36</a> . Also removed $T_{DOQ}$ from <a href="#">Table 36</a> . Removed $T_{ISDO\_DO}$ and note 1 from <a href="#">Table 37</a> . Removed $T_{OSCK\_S}$ and combinatorial section from <a href="#">Table 38</a> . In <a href="#">Table 39</a> , removed $T_{IODDO\_T}$ and added new tap parameters and note 2. In <a href="#">Table 40</a> , <a href="#">Table 41</a> , and <a href="#">Table 42</a> , made typographical edits and removed notes. Removed clock CLK section in <a href="#">Table 41</a> . Removed clock CLK section and $T_{REG\_MUX}$ and $T_{REG\_M31}$ in <a href="#">Table 42</a> . Added block RAM $F_{MAX}$ values to <a href="#">Table 43</a> . Updated values and added note 2 to <a href="#">Table 45</a> . Added values to <a href="#">Table 46</a> and removed note 1. Numerous changes to <a href="#">Table 47</a> . Completely updated <a href="#">Table 57</a> . Revised data in <a href="#">Table 62</a> . Removed note 3 from <a href="#">Table 71</a> . Added values to <a href="#">Table 79</a> . Added data to <a href="#">Table 80</a> and <a href="#">Table 81</a> . |
| 03/10/10 | 1.4     | Production release of XC6SLX45 -2 speed grade devices, which includes changes to <a href="#">Table 26</a> and <a href="#">Table 27</a> updating this data sheet to the data in ISE v11.5 software with speed specification v1.07. Fixed $R_{IN\_TERM}$ description in <a href="#">Table 4</a> . Added PCI66_3 to <a href="#">Table 7</a> and replaced note 1. Corrected note 1 and the V, Max for TMDS_33 in <a href="#">Table 8</a> . In <a href="#">Table 10</a> , added note 1 to LVPECL_33 and TMDS_33. Also updated specifications for TMDS_33. Updated the <i>GTP Transceiver Specifications</i> section including adding values to <a href="#">Table 16</a> , <a href="#">Table 17</a> , and <a href="#">Table 20</a> through <a href="#">Table 23</a> . Added PCI66_3 back into <a href="#">Table 9</a> , <a href="#">Table 28</a> , <a href="#">Table 31</a> , <a href="#">Table 32</a> , and <a href="#">Table 34</a> . Updated note 3 on <a href="#">Table 32</a> . In <a href="#">Table 34</a> , corrected some typographical errors and fixed SSO limits for bank1/3 in FG(G)484 package. Corrected $T_{OSCK\_OCE}$ in <a href="#">Table 38</a> . In <a href="#">Table 57</a> , updated CLKFX_FREEZE_VAR and CLKFX_FREEZE_TEMP_SLOPE and added typical values to $T_{CENTER\_LOW\_SPREAD}$ and $T_{CENTER\_HIGH\_SPREAD}$ . Updated and added values to <a href="#">Table 63</a> through <a href="#">Table 78</a> , and <a href="#">Table 81</a> . In <a href="#">Table 79</a> , revised the XC6SLX16-CSG324 and the XC6SLX45-CSG484 and FG(G)484 values.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
