### Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

### Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

#### Details

|                                |                                                                                                                                           |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|

### Notes:

- V<sub>CCO</sub> range required when using I/O standard for an output. Also required for MOBILE\_DDR, PCI33\_3, LVC MOS18\_JEDEC, LVC MOS15\_JEDEC, and LVC MOS12\_JEDEC inputs, and for LVC MOS25 inputs when V<sub>CCAUX</sub> = 3.3V.
- For PCI systems, the transmitter and receiver should have common supplies for V<sub>CCO</sub>.

In Table 9 and Table 10, values for  $V_{IL}$  and  $V_{IH}$  are recommended input voltages. Values for  $I_{OL}$  and  $I_{OH}$  are guaranteed over the recommended operating conditions at the  $V_{OL}$  and  $V_{OH}$  test points. Only selected standards are tested. These are chosen to ensure that all standards meet their specifications. The selected standards are tested at a minimum  $V_{CCO}$  with the respective  $V_{OL}$  and  $V_{OH}$  voltage levels shown. Other standards are sample tested.

Table 9: Single-Ended I/O Standard DC Input and Output Levels

| I/O Standard    | $V_{IL}$ |                   | $V_{IH}$          |                 | $V_{OL}$        | $V_{OH}$         | $I_{OL}$ | $I_{OH}$ |

**Notes:**

1. Tested according to relevant specifications.
2. Using drive strengths of 2, 4, 6, 8, 12, 16, or 24 mA.
3. Using drive strengths of 2, 4, 6, 8, 12, or 16 mA.
4. Using drive strengths of 2, 4, 6, 8, or 12 mA.
5. For more information, refer to [UG381](#): *Spartan-6 FPGA SelectIO Resources User Guide*.

Table 14: GTP Transceiver Current Supply (per Lane)

| Symbol                  | Description                                                       | Typ <sup>(1)</sup>  | Max    | Units |
|-------------------------|-------------------------------------------------------------------|---------------------|--------|-------|
| I <sub>MGTAVCC</sub>    | GTP transceiver internal analog supply current                    | 40.4                | Note 2 | mA    |
| I <sub>MGTAVTTTX</sub>  | GTP transmitter termination supply current                        | 27.4                |        | mA    |
| I <sub>MGTAVTTRX</sub>  | GTP receiver termination supply current                           | 13.6                |        | mA    |
| I <sub>MGTAVCCPLL</sub> | GTP transmitter and receiver PLL supply current                   | 28.7                |        | mA    |
| R <sub>MGTRREF</sub>    | Precision reference resistor for internal calibration termination | 50.0 ± 1% tolerance |        | Ω     |

**Notes:**

1. Typical values are specified at nominal voltage, 25°C, with a 2.5 Gb/s line rate, with a shared PLL use mode.
2. Values for currents of other transceiver configurations and conditions can be obtained by using the XPOWER Estimator (XPE) or XPOWER Analyzer (XPA) tools.

Table 15: GTP Transceiver Quiescent Supply Current (per Lane)<sup>(1)(2)(3)(4)</sup>

| Symbol                   | Description                         | Typ <sup>(5)</sup> | Max    | Units |
|--------------------------|-------------------------------------|--------------------|--------|-------|
| I <sub>MGTAVCCQ</sub>    | Quiescent MGTAVCC supply current    | 1.7                | Note 2 | mA    |
| I <sub>MGTAVTTTXQ</sub>  | Quiescent MGTAVTTTX supply current  | 0.1                |        | mA    |
| I <sub>MGTAVTTRXQ</sub>  | Quiescent MGTAVTTRX supply current  | 1.2                |        | mA    |
| I <sub>MGTAVCCPLLQ</sub> | Quiescent MGTAVCCPLL supply current | 1.0                |        | mA    |

**Notes:**

1. Device powered and unconfigured.
2. Currents for conditions other than values specified in this table can be obtained by using the XPOWER Estimator (XPE) or XPOWER Analyzer (XPA) tools.
3. GTP transceiver quiescent supply current for an entire device can be calculated by multiplying the values in this table by the number of available GTP transceivers.
4. Does not include power-up MGTAVTTRCAL supply current during device configuration.
5. Typical values are specified at nominal voltage, 25°C.

Table 28: IOB Switching Characteristics for the Commercial (XC) Spartan-6 Devices (Cont'd)

| I/O Standard                    | T <sub>IOPI</sub> |      |      |                    | T <sub>IOOP</sub> |      |      |                    | T <sub>IOTP</sub> |      |      |                    | Units |
|---------------------------------|-------------------|------|------|--------------------|-------------------|------|------|--------------------|-------------------|------|------|--------------------|-------|

#### Notes:

1. Input waveform switches between  $V_L$  and  $V_H$ .
2. Measurements are made at typical, minimum, and maximum  $V_{REF}$  values. Reported delays reflect worst case of these measurements.  $V_{REF}$  values listed are typical.
3. Input voltage level from which measurement starts.
4. This is an input voltage reference that bears no relation to the  $V_{REF}$  /  $V_{MEAS}$  parameters found in IBIS models and/or noted in Figure 4.
5. The value given is the differential input voltage.

## Output Delay Measurements

Output delays are measured using a Tektronix P6245 TDS500/600 probe (< 1 pF) across approximately 4" of FR4 microstrip trace. Standard termination was used for all testing. The propagation delay of the 4" trace is characterized separately and subtracted from the final measurement, and is therefore not included in the generalized test setups shown in Figure 4 and Figure 5.

Figure 4: Single-Ended Test Setup

ds162\_07\_011309

Figure 5: Differential Test Setup

Measurements and test conditions are reflected in the IBIS models except where the IBIS format precludes it. Parameters  $V_{REF}$ ,  $R_{REF}$ ,  $C_{REF}$ , and  $V_{MEAS}$  fully describe the test conditions for each I/O standard. The most accurate prediction of propagation delay in any given application can be obtained through IBIS simulation, using the following method:

1. Simulate the output driver of choice into the generalized test setup, using values from Table 32.
2. Record the time to  $V_{MEAS}$ .
3. Simulate the output driver of choice into the actual PCB trace and load, using the appropriate IBIS model or capacitance value to represent the load.
4. Record the time to  $V_{MEAS}$ .
5. Compare the results of steps 2 and 4. The increase or decrease in delay yields the actual propagation delay of the PCB trace.

Table 32: Output Delay Measurement Methodology

| Description                                                     | I/O Standard Attribute          | $R_{REF}$ ( $\Omega$ ) | $C_{REF}^{(1)}$ (pF) | $V_{MEAS}$ (V) | $V_{REF}$ (V) |
|-----------------------------------------------------------------|---------------------------------|------------------------|----------------------|----------------|---------------|

| T <sub>CENTER_HIGH_SPREAD</sub> <sup>(6)</sup>        | Spread at the CLKFX output for fixed spread spectrum (SPREAD_SPECTRUM= CENTER_HIGH_SPREAD)                               | Typical = $\frac{240}{\text{CLKFX\_DIVIDE}}$<br>Maximum = 400 |     |     |     |     |     |     |     | ps    |
| F <sub>MOD_FIXED_SPREAD_SPECTRUM</sub> <sup>(6)</sup> | Average modulation frequency when using fixed spread spectrum (SPREAD_SPECTRUM = CENTER_LOW_SPREAD / CENTER_HIGH_SPREAD) | Typical = F <sub>IN</sub> /1024                               |     |     |     |     |     |     |     | MHz   |

**Notes:**

- The values in this table are based on the operating conditions described in Table 2 and Table 55.
- For optimal jitter tolerance and a faster LOCK time, use the CLKIN\_PERIOD attribute.
- Output jitter is characterized with no input jitter. Output jitter strongly depends on the environment, including the number of SSOs, the output drive strength, CLB utilization, CLB switching activities, switching frequency, power supply, and PCB design. The actual maximum output jitter depends on the system application.
- The CLKFX, CLKFXDV, and CLKFX180 outputs have a duty cycle of approximately 50%.
- Some duty-cycle and alignment specifications include a percentage of the CLKFX output period. For example, this data sheet specifies a maximum CLKFX jitter of  $\pm(1\% \text{ of CLKFX period} + 200 \text{ ps})$ . Assuming that the CLKFX output frequency is 100 MHz, the equivalent CLKFX period is 10 ns, and 1% of 10 ns is 0.1 ns or 100 ps. Accordingly, the maximum jitter is  $\pm(100 \text{ ps} + 200 \text{ ps}) = \pm 300 \text{ ps}$ .
- When using CENTER\_LOW\_SPREAD, CENTER\_HIGH\_SPREAD, the valid values for CLKFX\_MULTIPLY are limited to 2 through 32, and the valid values for CLKFX\_DIVIDE are limited to 1 through 4.

| PSCLK_PULSE                | PSCLK (DCM_SP) or PROGCLK (DCM_CLKGEN) pulse width as a percentage of the clock period. | 40          | 60  | 40  | 60  | 40  | 60  | 40  | 60  | %     |

## Spartan-6 Device Pin-to-Pin Output Parameter Guidelines

All devices are 100% functionally tested. The representative values for typical pin locations and normal clock loading are listed in Table 63 through Table 69. Values are expressed in nanoseconds unless otherwise noted.

Table 63: Global Clock Input to Output Delay Without DCM or PLL

### Notes:

- Listed above are representative values where one global clock input drives one vertical clock line in each accessible column, and where all accessible IOB and CLB flip-flops are clocked by the global clock net.

Table 65: Global Clock Input to Output Delay With DCM in Source-Synchronous Mode

| Symbol                                                                                                                                | Description                            | Device     | Speed Grade |      |      |      | Units |
|---------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|------------|-------------|------|------|------|-------|

**Notes:**

1. Listed above are representative values where one global clock input drives one vertical clock line in each accessible column, and where all accessible IOB and CLB flip-flops are clocked by the global clock net.
2. DCM output jitter is already included in the timing calculation.

## Spartan-6 Device Pin-to-Pin Input Parameter Guidelines

All devices are 100% functionally tested. The representative values for typical pin locations and normal clock loading are listed in Table 70 through Table 77. Values are expressed in nanoseconds unless otherwise noted.

Table 70: Global Clock Setup and Hold Without DCM or PLL (No Delay)

| Symbol                                                                                     | Description                                            | Device     | Speed Grade |            |            |            | Units |

### Notes:

- Setup and Hold times are measured over worst case conditions (process, voltage, temperature). Setup time is measured relative to the Global Clock input signal using the slowest process, highest temperature, and lowest voltage. Hold time is measured relative to the Global Clock input signal using the fastest process, lowest temperature, and highest voltage.
- IFF = Input Flip-Flop or Latch.

**Notes:**

1. LXT devices are not available with a -1L speed grade. The LX4 is not available in -3N speed grade.
2. These parameters represent the worst-case duty cycle distortion observable at the pins of the device using LVDS output buffers. For cases where other I/O standards are used, IBIS can be used to calculate any additional duty cycle distortion that might be caused by asymmetrical rise/fall times.
3. The T<sub>CKSKEW</sub> value represents the worst-case clock-tree skew observable between sequential I/O elements. Significantly less clock-tree skew exists for I/O registers that are close to each other and fed by the same or adjacent clock-tree branches. Use the Xilinx FPGA Editor and Timing Analyzer tools to evaluate clock skew specific to your application.
4. The T<sub>CKSKEW</sub> is 0.43 ns for the XA6SLX100 device using a -2 speed grade and 0.22 ns for the XC6SLX100 devices using the -2 speed grade.

Table 79: Package Skew

| Symbol               | Description                 | Device | Package <sup>(2)</sup> | Value | Units |

|                      |                             |        | FG(G)900               | 120   | ps    |

**Notes:**

- These values represent the worst-case skew between any two SelectIO resources in the package: shortest delay to longest delay from Pad to Ball.
- Some of the devices are available in both Pb and Pb-free (additional G) packages as standard ordering options. See [DS160: Spartan-6 Family Overview](#) for more information.

Table 80: Sample Window

| Symbol                   | Description                                                 | Device <sup>(1)</sup> | Speed Grade |     |     |     | Units |
|--------------------------|-------------------------------------------------------------|-----------------------|-------------|-----|-----|-----|-------|
|                          |                                                             |                       | -3          | -3N | -2  | -1L |       |
| T <sub>SAMP</sub>        | Sampling Error at Receiver Pins <sup>(2)</sup>              | All                   | 510         | 510 | 530 | 740 | ps    |
| T <sub>SAMP_BUFIO2</sub> | Sampling Error at Receiver Pins using BUFIO2 <sup>(3)</sup> | All                   | 430         | 430 | 450 | 590 | ps    |

**Notes:**

- LXT devices are not available with a -1L speed grade.
- This parameter indicates the total sampling error of Spartan-6 FPGA DDR input registers, measured across voltage, temperature, and process. The characterization methodology uses the DCM to capture the DDR input registers' edges of operation. These measurements include:
  - CLK0 DCM jitter
  - DCM accuracy (phase offset)
  - DCM phase shift resolution
 These measurements do not include package or clock tree skew.
- This parameter indicates the total sampling error of Spartan-6 FPGA DDR input registers, measured across voltage, temperature, and process. The characterization methodology uses the BUFIO2 clock network and IODELAY2 to capture the DDR input registers' edges of operation. These measurements do not include package or clock tree skew.

| Date     | Version | Description of Revisions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| 06/14/10 | 1.5     | <p>In <a href="#">Table 2</a>, added note 5 and added temperature range to <math>V_{FS}</math> and <math>R_{FUSE}</math>. Removed speed grade delineation, revised <math>I_{RPD}</math> description, and updated note 2 in <a href="#">Table 4</a>. Added note 2 to <a href="#">Table 7</a>. Added <math>DIFF\_MOBILE\_DDR</math> to <a href="#">Table 8</a> and <a href="#">Table 10</a>. Added note 4 to <a href="#">Table 15</a>. Changed minimum <math>DV_{PPIN}</math> in <a href="#">Table 16</a>. Updated <math>F_{GTPDRCLK}</math> in <a href="#">Table 19</a>. Increased maximum <math>T_{LLSKEW}</math> in <a href="#">Table 22</a>. Updated descriptions and added data to <a href="#">Table 23</a>. Removed note 1 and added new data to the Networking Applications section in <a href="#">Table 25</a>. Updated <a href="#">Table 26</a> and <a href="#">Table 27</a> to the data in ISE v12.1 software with speed specification v1.08. In <a href="#">Table 28</a>, added <math>DIFF\_MOBILE\_DDR</math> and updated -4 speed grade data. Updated the maximum I/O pairs per bank in <a href="#">Table 33</a>. Updated note 2 on <a href="#">Table 39</a>. Revised the <math>F_{MAX}</math> in <a href="#">Table 44</a>. In <a href="#">Table 47</a>, updated description for <math>T_{SMCKCSO}</math>, revised values for <math>T_{POR}</math> and added Min value, added <math>T_{BPIICCK}</math> and <math>T_{SPIICCK}</math>. Also in <a href="#">Table 47</a>, added device dependencies to <math>F_{SMCKCK}</math> and <math>F_{RBCKCK}</math>. Updated and added data to <a href="#">Table 63</a> through <a href="#">Table 78</a>, and <a href="#">Table 81</a>. In <a href="#">Table 79</a>, added data on the XC6SLX45-FG(G)676 and revised the XC6SLX45T and XC6SLX150T values.</p> <p>The following changes to this specification are addressed in the product change notice <a href="#">XC6SLX45-FG(G)676</a>, <i>MCB Performance and JTAG Revision Code for Spartan-6 LX16 and LX45 FPGAs</i>. In <a href="#">Table 2</a>, revised the <math>V_{CCINT}</math> to add the memory controller block extended performance specifications. In <a href="#">Table 25</a>, changed the standard specifications and added extended performance specifications for the memory controller block and note 2. Added note 4 and updated values in <a href="#">Table 34</a>.</p> |
| 06/24/10 | 1.6     | <p>Production release of XC6SLX45T (-2 and -3 speed grades), XC6SLX16 and XC6SLX45 (-3 speed grade) devices which includes changes to <a href="#">Table 26</a> and <a href="#">Table 27</a> (ISE v12.1 software with speed specification v1.08).</p> <p>Added the -3N speed grade, which designates Spartan-6 devices that do not support MCB functionality. This includes changes to <a href="#">Table 2</a> (note 2), <a href="#">Table 25</a> (note 4), and <a href="#">Switching Characteristics</a> (<a href="#">Table 26</a>).</p> <p>Updated <a href="#">Simultaneously Switching Outputs</a> discussion. Added -3 speed grade values for <math>T_{TAP}</math> and <math>F_{MINCAL}</math> values in <a href="#">Table 39</a>. In <a href="#">Table 40</a>, updated <math>T_{RPW}</math> (-2 and -3 speed grade) values and <math>F_{TOG}</math> (-3 speed grade) values. In <a href="#">Table 48</a>, updated <math>T_{GIO}</math> (-2 and -3 speed grade) values. Updated -3 values in spread spectrum section of <a href="#">Table 57</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 07/16/10 | 1.7     | <p>Production release of specific devices listed in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v12.2 software with speed specification v1.11. Added note 4 advising designers of the patch which contains v1.11. Also updated the -1L speed specification to v1.04. Updated numerous -4 and -1L values. Added -4 <math>T_{TAP}</math> values and <math>F_{MINCAL}</math> to <a href="#">Table 39</a>. Revised <math>T_{CINCK}/T_{CKCIN}</math> in <a href="#">Table 40</a>. In <a href="#">Table 41</a>, revised <math>T_{SHCKO}</math>. In <a href="#">Table 42</a>, revised <math>T_{REQ}</math>. Added new -1L values to <a href="#">Table 47</a>. Added and updated values in <a href="#">Table 79</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 07/26/10 | 1.8     | <p>Production release of XC6SLX25, XC6SLX25T, XC6SLX100 and XC6SLX100T in the specific speed grades listed in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v12.2 software with speed specification v1.11. Added note 7 to <a href="#">Table 2</a> and moved <math>V_{FS}</math> and <math>R_{FUSE}</math> to a new <a href="#">Table 3</a>. Added <math>I_{HS}</math> and note 4 to <a href="#">Table 4</a>. Added note 1 to <a href="#">Table 28</a>. Added and updated SSO limits per <math>V_{CCO}/GND</math> pairs in <a href="#">Table 34</a>. Added note 3 to <a href="#">Table 47</a>. In <a href="#">Table 54</a>, removed -1L specifications for <math>CLKOUT\_PER\_JITT\_DV1/2</math> and revised <math>CLKIN\_CLKFB\_PHASE</math> and <math>CLKOUT\_PHASE\_DLL</math> values. Updated note 3 in both <a href="#">Table 56</a> and <a href="#">Table 57</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 08/23/10 | 1.9     | <p>Updated values for <math>F_{GTPRANGE1}</math>, <math>F_{GTPRANGE2}</math>, and <math>F_{GPLLMIN}</math> in <a href="#">Table 18</a>. Revised -3 and -4 values in <a href="#">Table 21</a>. Removed the -1L speed grade readback support restriction and note 3 in <a href="#">Table 47</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 11/05/10 | 1.10    | <p>Production release of XC6SLX4 and XC6SLX9 in the specific speed grades listed in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v12.3 software with speed specification v1.12 for the -2 speed grade available in the 12.3 <i>Speed Files Patch</i>. Added note 3 advising designers of the patch which contains v1.12.</p> <p>In <a href="#">Table 2</a>, added note 4. In <a href="#">Table 4</a>, added note 2. In <a href="#">Table 10</a>, added notes 2 and 3. In <a href="#">Table 44</a>, added note 2. In <a href="#">Table 47</a>, updated symbol for <math>T_{SMWCKCK}/T_{SMCKCKW}</math>, changed -1L values for <math>T_{USERCCLKH}</math> and <math>T_{USERCCLKL}</math>, and added and revised the modes for <math>F_{MCKCK}</math> and <math>F_{SMCKCK}</math>. In <a href="#">Table 53</a>, redefined and expanded description for <math>CLKIN\_FREQ\_DLL</math> and rewrote note 3. Updated title of <a href="#">Table 58</a>. Also in <a href="#">Table 78</a>, revised <math>T_{DCD\_CLK}</math> for XC6SLX150 and XC6SLX150T. Changed description of <math>T_{PSFD}/T_{PHFD}</math> in <a href="#">Table 71</a>.</p> <p>For the -1L speed grade, updated data sheet to ISE 12.3 software with speed specification v1.05 which revised the values in the following tables: <a href="#">Table 25</a>, <a href="#">Table 28</a>, <a href="#">Table 35</a>, <a href="#">Table 36</a>, <a href="#">Table 37</a>, <a href="#">Table 40</a> through <a href="#">Table 43</a>, <a href="#">Table 48</a> through <a href="#">Table 56</a>, <a href="#">Table 62</a> through <a href="#">Table 78</a>, <a href="#">Table 80</a>, and <a href="#">Table 81</a>. Updated <a href="#">Notice of Disclaimer</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Date     | Version | Description of Revisions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| 01/10/11 | 1.11    | <p>Production release of XC6SLX4 and XC6SLX9 in the specific speed grades listed in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v12.4 software with speed specification v1.15 for the -4, -3, -3N, and -2 speed grades. Added note 3 to <a href="#">Table 27</a>. Also updated the -1L speed grade requirements to ISE v12.4 software with speed specification v1.06. Revised -3N definition throughout the document.</p> <p>Added note 4 to <a href="#">Table 2</a> and updated note 5. Added information on <math>V_{CCINT}</math> to note 1 in <a href="#">Table 5</a>. Updated Networking Applications -3 values in <a href="#">Table 25</a> to match improvements made in ISE v12.4. In <a href="#">Table 28</a>, added note 1 and revised the <math>T_{IOTP}</math> values for LVDS_33, LVDS_25, MINI_LVDS_33, MINI_LVDS_25, RSDS_33, RSDS_25, TMDS_33, PPDS_33, and PPDS_25. Added note 3 to <a href="#">Table 55</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| 02/11/11 | 1.12    | <p>As described in <a href="#">XCEN11008: Product Discontinuation Notice For Spartan-6 LXT -4 Devices</a>, the -4 speed specifications have been discontinued. As outlined in page 2 of the XCN, designers currently using -4 speed specifications should rerun timing analysis using the new -3 speed specifications before moving to a replacement device.</p> <p>Updated the networking applications section of <a href="#">Table 25</a>. Updated -2 speed specifications throughout document and added note 3 to <a href="#">Table 27</a> advising designers to use the -2 speed specification update (v1.17) with the ISE 12.4 software patch. Added <math>F_{CLKDIV}</math> to <a href="#">Table 37</a> and <a href="#">Table 38</a>. Updated note 2 in <a href="#">Table 39</a>. Updated units for <math>T_{SMCKCSO}</math> and <math>T_{BPICCO}</math> in <a href="#">Table 47</a>. Updated -1L in <a href="#">Table 71</a>. Removed Note 2: <i>Package delay information is available for these device/package combinations. This information can be used to deskew the package</i> from <a href="#">Table 79</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| 03/31/11 | 2.0     | <p>Production release of XC6SLX45 in the -1L speed grades listed in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v13.1 software with -1L speed specification v1.06.</p> <p>In <a href="#">Table 39</a>, removed values in the -1L column and added note 3 as IODELAY2 only supports Tap0 for lower-power devices. Updated copyright <a href="#">page 1</a> and <a href="#">Notice of Disclaimer</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| 05/20/11 | 2.1     | <p>Production release of XC6SLX100 and XC6SLX150 in the specific speed grades listed in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v13.1 software with -1L speed specification v1.06. Updated <a href="#">Table 27</a> and <a href="#">Note 7</a> with changes per <a href="#">XCEN11012: Speed File Change for -3N Devices</a>. Revised <a href="#">Switching Characteristics</a> section for speed specifications: v1.18 for -3, -3N, and -2; including improvements in <a href="#">Table 73</a> through <a href="#">Table 77</a> and <a href="#">Table 81</a>.</p> <p>Removed <i>Memory Controller Block</i> from the performance heading in <a href="#">Table 2</a> and revised <a href="#">Note 2</a>. In <a href="#">Table 4</a>, added <a href="#">Note 1</a> to <math>C_{IN}</math> and updated the description of <math>R_{IN\_TERM}</math>. Updated <a href="#">Note 1</a> in <a href="#">Table 5</a>. Updated <a href="#">Note 1</a> of <a href="#">Table 7</a>. In <a href="#">Table 25</a>, added and removed -1L specifications, increased the standard performance DDR3 specifications, removed the extended performance DDR3 row and updated <a href="#">Note 3</a> and <a href="#">Note 4</a>. Clarified the introductory information for <a href="#">Table 28</a> and <a href="#">Table 30</a>.</p> <p>In <a href="#">Table 32</a>: Revised <math>V_{MEAS}</math> value for LVCMOS12; revised <math>V_{REF}</math> for LVDS_25, LVDS_33, BLVDS_25, MINI_LVDS_25, MINI_LVDS_33, RSDS_25, and RSDS_33; revised <math>R_{REF}</math> for BLVDS_25 and TMDS_33; and added <a href="#">Note 4</a> and <a href="#">Note 5</a>. Updated <a href="#">Note 2</a> and <a href="#">Note 3</a> in <a href="#">Table 39</a>.</p> <p>In <a href="#">Table 47</a>, revised the values and description of <math>T_{POR}</math> including adding <a href="#">Note 3</a>. Also in <a href="#">Table 47</a>, augmented the description and added specifications for <math>F_{RBCK}</math> and removed XC6SLX4 from <math>F_{MCCK}</math> (maximum frequency, parallel mode (Master SelectMAP/BPI)). Added BUFGMUX to <a href="#">Table 48</a> title. Added <a href="#">Table 50</a>.</p> <p>In <a href="#">Table 52</a>, revised specifications for <math>T_{EXTFVAR}</math> and <math>F_{INJITTER}</math>. In <a href="#">Table 54</a> removed the 5 MHz &lt; CLKIN_FREQ_DLL parameter in the LOCK_DLL description. In both <a href="#">Table 56</a> and <a href="#">Table 57</a>, removed the 5 MHz &lt; <math>F_{CLKIN}</math> parameter in the LOCK_FX description. In <a href="#">Table 58</a>, updated description for PSCLK_FREQ and PSCLK_PULSE.</p> <p>Revised title and symbol of <a href="#">Table 70</a>, added new speed specifications for -1L, and added <a href="#">Note 2</a>. Added <a href="#">Table 71</a>.</p> |
| 07/11/11 | 2.2     | <p>Added the Automotive XA Spartan-6 and Defense-grade Spartan-6Q devices to all appropriate tables while sometimes removing the XC6S nomenclature. Added expanded temperature range (Q) to all appropriate tables. Updated <math>T_{SOL}</math> packages in <a href="#">Table 1</a>. Added <math>R_{OUT\_TERM}</math> to <a href="#">Table 4</a>. Updated <a href="#">Note 2</a> on <a href="#">Table 13</a>.</p> <p>Production release of the XC6SLX4, XC6SLX9, XC6SLX16, XC6SLX25, XC6SLX75, XQ6SLX75, and XQ6SLX150 in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v13.2 software with -1L speed specification v1.07.</p> <p>Production release of the XA6SLX16, XA6SLX25T, XA6SLX45, XA6SLX45T, XQ6SLX75, XQ6SLX75T, XQ6SLX150, and XQ6SLX150T in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v13.2 software with -2 and -3 speed specification v1.19.</p> <p>Added <a href="#">Table 29: IOB Switching Characteristics for the Automotive XA Spartan-6 and the Spartan-6Q Devices(1)</a>. Updated CS(G)484 from CSG484 throughout data sheet. Clarified <a href="#">Note 3</a> in <a href="#">Table 39</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
