### Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

### Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

#### Details

|                                |                                                                                                                                             |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| Product Status                 | Active                                                                                                                                      |
| Number of LABs/CLBs            | 5831                                                                                                                                        |
| Number of Logic Elements/Cells | 74637                                                                                                                                       |
| Total RAM Bits                 | 3170304                                                                                                                                     |
| Number of I/O                  | 292                                                                                                                                         |
| Number of Gates                | -                                                                                                                                           |
| Voltage - Supply               | 1.14V ~ 1.26V                                                                                                                               |
| Mounting Type                  | Surface Mount                                                                                                                               |
| Operating Temperature          | 0°C ~ 85°C (TJ)                                                                                                                             |
| Package / Case                 | 484-FBGA, CSPBGA                                                                                                                            |
| Supplier Device Package        | 484-CSPBGA (19x19)                                                                                                                          |

Table 5: Typical Quiescent Supply Current (Cont'd)

| Symbol              | Description                                 | Device | Speed Grade |      |      |      | Units |
|---------------------|---------------------------------------------|--------|-------------|------|------|------|-------|
|                     |                                             |        | -3          | -3N  | -2   | -1L  |       |
| I <sub>CCAUXQ</sub> | Quiescent V <sub>CCAUX</sub> supply current | LX4    | 2.5         | 2.5  | 2.5  | 2.5  | mA    |
|                     |                                             | LX9    | 2.5         | 2.5  | 2.5  | 2.5  | mA    |
|                     |                                             | LX16   | 3.0         | 3.0  | 3.0  | 3.0  | mA    |
|                     |                                             | LX25   | 4.0         | 4.0  | 4.0  | 4.0  | mA    |
|                     |                                             | LX25T  | 4.0         | 4.0  | 4.0  | N/A  | mA    |
|                     |                                             | LX45   | 5.0         | 5.0  | 5.0  | 5.0  | mA    |
|                     |                                             | LX45T  | 5.0         | 5.0  | 5.0  | N/A  | mA    |
|                     |                                             | LX75   | 7.0         | 7.0  | 7.0  | 7.0  | mA    |
|                     |                                             | LX75T  | 7.0         | 7.0  | 7.0  | N/A  | mA    |
|                     |                                             | LX100  | 9.0         | 9.0  | 9.0  | 9.0  | mA    |
|                     |                                             | LX100T | 9.0         | 9.0  | 9.0  | N/A  | mA    |
|                     |                                             | LX150  | 12.0        | 12.0 | 12.0 | 12.0 | mA    |
|                     |                                             | LX150T | 12.0        | 12.0 | 12.0 | N/A  | mA    |

**Notes:**

- Typical values are specified at nominal voltage, 25°C junction temperatures (T<sub>j</sub>). Industrial (I) grade devices have the same typical values as commercial (C) grade devices at 25°C, but higher values at 100°C. Use the XPE tool to calculate 100°C values. Nominal V<sub>CCINT</sub> is 1.20V; use the XPE tool to calculate 1.23V values for the nominal V<sub>CCINT</sub> of the extended performance range.
- Typical values are for blank configured devices with no output current loads, no active input pull-up resistors, all I/O pins are 3-state and floating.
- If differential signaling is used, more accurate quiescent current estimates can be obtained by using the XPOWER Estimator (XPE) or XPOWER Analyzer (XPA) tools.

Table 6: Power Supply Ramp Time

| Symbol                           | Description                                    | Speed Grade | Ramp Time    | Units |
|----------------------------------|------------------------------------------------|-------------|--------------|-------|
| V <sub>CCINTR</sub>              | Internal supply voltage ramp time              | -3, -3N, -2 | 0.20 to 50.0 | ms    |
|                                  |                                                | -1L         | 0.20 to 40.0 | ms    |
| V <sub>CCO2</sub> <sup>(1)</sup> | Output drivers bank 2 supply voltage ramp time | All         | 0.20 to 50.0 | ms    |
| V <sub>CCAUXR</sub>              | Auxiliary supply voltage ramp time             | All         | 0.20 to 50.0 | ms    |

**Notes:**

- The minimum V<sub>CCO2</sub> for power-on reset and configuration is 1.65V.
- Spartan-6 FPGAs require a certain amount of supply current during power-on to insure proper device initialization. The actual current consumed depends on the power-on ramp rate of the power supply. Use the XPOWER Estimator (XPE) or XPOWER Analyzer (XPA) tools to estimate current drain on these supplies. Spartan-6 devices do not have a required power-on sequence.

## eFUSE Read Endurance

Table 11 lists the minimum guaranteed number of read cycle operations for Device DNA and for the AES eFUSE key. For more information, see [UG380: Spartan-6 FPGA Configuration User Guide](#).

Table 11: eFUSE Read Endurance

| Symbol     | Description                                                                                                 | Speed Grade |     |    |     | Units (Min) |
|------------|-------------------------------------------------------------------------------------------------------------|-------------|-----|----|-----|-------------|
|            |                                                                                                             | -3          | -3N | -2 | -1L |             |
| DNA_CYCLES | Number of DNA_PORT READ operations or JTAG ISC_DNA read command operations. Unaffected by SHIFT operations. | 30,000,000  |     |    |     | Read Cycles |
| AES_CYCLES | Number of JTAG FUSE_KEY or FUSE_CNTL read command operations. Unaffected by SHIFT operations.               | 30,000,000  |     |    |     | Read Cycles |

## GTP Transceiver Specifications

GTP transceivers are available in the Spartan-6 LXT devices. See [DS160: Spartan-6 Family Overview](#) for more information.

### GTP Transceiver DC Characteristics

Table 12: Absolute Maximum Ratings for GTP Transceivers<sup>(1)</sup>

| Symbol                 | Description                                                                                            | Min  | Max  | Units |
|------------------------|--------------------------------------------------------------------------------------------------------|------|------|-------|
| MGTAVCC                | Analog supply voltage for the GTP transmitter and receiver circuits relative to GND                    | -0.5 | 1.32 | V     |
| MGTAVTTTX              | Analog supply voltage for the GTP transmitter termination circuit relative to GND                      | -0.5 | 1.32 | V     |
| MGTAVTTRX              | Analog supply voltage for the GTP receiver termination circuit relative to GND                         | -0.5 | 1.32 | V     |
| MGTAVCCPLL             | Analog supply voltage for the GTP transmitter and receiver PLL circuits relative to GND                | -0.5 | 1.32 | V     |
| MGTAVTTRCAL            | Analog supply voltage for the resistor calibration circuit of the GTP transceiver bank (top or bottom) | -0.5 | 1.32 | V     |
| V <sub>IN</sub>        | Receiver (RXP/RXN) and Transmitter (TXP/TXN) absolute input voltage                                    | -0.5 | 1.32 | V     |
| V <sub>MGTREFCLK</sub> | Reference clock absolute input voltage                                                                 | -0.5 | 1.32 | V     |

#### Notes:

- Stresses beyond those listed under Absolute Maximum Ratings might cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those listed under Operating Conditions is not implied. Exposure to Absolute Maximum Ratings conditions for extended periods of time might affect device reliability.

Table 13: Recommended Operating Conditions for GTP Transceivers<sup>(1)(2)(3)</sup>

| Symbol      | Description                                                                                            | Min  | Typ  | Max  | Units |
|-------------|--------------------------------------------------------------------------------------------------------|------|------|------|-------|
| MGTAVCC     | Analog supply voltage for the GTP transmitter and receiver circuits relative to GND                    | 1.14 | 1.20 | 1.26 | V     |
| MGTAVTTTX   | Analog supply voltage for the GTP transmitter termination circuit relative to GND                      | 1.14 | 1.20 | 1.26 | V     |
| MGTAVTTRX   | Analog supply voltage for the GTP receiver termination circuit relative to GND                         | 1.14 | 1.20 | 1.26 | V     |
| MGTAVCCPLL  | Analog supply voltage for the GTP transmitter and receiver PLL circuits relative to GND                | 1.14 | 1.20 | 1.26 | V     |
| MGTAVTTRCAL | Analog supply voltage for the resistor calibration circuit of the GTP transceiver bank (top or bottom) | 1.14 | 1.20 | 1.26 | V     |

#### Notes:

- Each voltage listed requires the filter circuit described in [UG386: Spartan-6 FPGA GTP Transceivers User Guide](#).
- Voltages are specified for the temperature range of T<sub>j</sub> = -40°C to +125°C.
- The voltage level of MGTAVCCPLL must not exceed the voltage level of MGTAVCC +10mV. The voltage level of MGTAVCC must not exceed the voltage level of MGTAVCCPLL.

Table 23: GTP Transceiver Receiver Switching Characteristics

| Symbol                                                  | Description                                                   |                                          | Min                  | Typ   | Max | Units |     |
|---------------------------------------------------------|---------------------------------------------------------------|------------------------------------------|----------------------|-------|-----|-------|-----|
| T <sub>RXELECIDLE</sub>                                 | Time for RXELECIDLE to respond to loss or restoration of data |                                          | –                    | 75    | –   | ns    |     |
| R <sub>XOOBVDPP</sub>                                   | OOB detect threshold peak-to-peak                             |                                          | 60                   | –     | 150 | mV    |     |
| R <sub>XSST</sub>                                       | Receiver spread-spectrum tracking <sup>(1)</sup>              | Modulated @ 33 KHz                       | –5000                | –     | 0   | ppm   |     |
| R <sub>XRL</sub>                                        | Run length (CID)                                              | Internal AC capacitor bypassed           | –                    | –     | 150 | UI    |     |
| R <sub>XPMTOL</sub>                                     | Data/REFCLK PPM offset tolerance                              | CDR 2 <sup>nd</sup> -order loop disabled | –200                 | –     | 200 | ppm   |     |
|                                                         |                                                               | CDR 2 <sup>nd</sup> -order loop enabled  | PLL_RXDIVSEL_OUT = 1 | –2000 | –   | 2000  | ppm |
|                                                         |                                                               |                                          | PLL_RXDIVSEL_OUT = 2 | –2000 | –   | 2000  | ppm |
|                                                         |                                                               |                                          | PLL_RXDIVSEL_OUT = 4 | –1000 | –   | 1000  | ppm |

**Notes:**

- Using PLL\_RXDIVSEL\_OUT = 1, 2, and 4.
- All jitter values are based on a Bit Error Ratio of 1e<sup>-12</sup>.
- Using 80 MHz sinusoidal jitter only in the absence of deterministic and random jitter.
- Composed of 0.37 UI DJ in the form of ISI and 0.18 UI RJ.
- Measured using PRBS7 data pattern.

## Endpoint Block for PCI Express Designs Switching Characteristics

The Endpoint block for PCI Express is available in the Spartan-6 LXT devices. Consult the [Spartan-6 FPGA Integrated Endpoint Block for PCI Express](#) for further information.

Table 24: Maximum Performance for PCI Express Designs

| Symbol                | Description                  | Speed Grade |      |      |     | Units |
|-----------------------|------------------------------|-------------|------|------|-----|-------|
|                       |                              | -3          | -3N  | -2   | -1L |       |
| F <sub>PCIEUSER</sub> | User clock maximum frequency | 62.5        | 62.5 | 62.5 | N/A | MHz   |

## Production Silicon and ISE Software Status

In some cases, a particular family member (and speed grade) is released to production before a speed specification is released with the correct label (Advance, Preliminary, Production). Any labeling discrepancies are corrected in subsequent speed specification releases. [Table 27](#) lists the production released Spartan-6 family member, speed grade, and the minimum corresponding supported speed specification version and ISE® software revisions. The ISE software and speed specifications listed are the minimum releases required for production. All subsequent releases of software and speed specifications are valid.

**Notes:**

1. The -1L values listed in this table are also applicable to the Spartan-6Q devices.
2. Devices with a -1L speed grade do not support Xilinx PCI IP.

**Notes:**

1. The Spartan-6Q FPGA -1L values are listed in Table 28.

Table 30 summarizes the value of T<sub>IOTPHZ</sub>. T<sub>IOTPHZ</sub> is described as the delay from the T pin to the IOB pad through the output buffer of an IOB pad, when 3-state is enabled (i.e., a high impedance state). These delays are measured using LVC MOS25, Fast, 12 mA.

Table 30: IOB 3-state ON Output Switching Characteristics (T<sub>IOTPHZ</sub>)

| Symbol              | Description                   | Speed Grade |      |      |      | Units |
|---------------------|-------------------------------|-------------|------|------|------|-------|
|                     |                               | -3          | -3N  | -2   | -1L  |       |
| T <sub>IOTPHZ</sub> | T input to Pad high-impedance | 1.39        | 1.59 | 1.59 | 1.91 | ns    |

Table 32: Output Delay Measurement Methodology (Cont'd)

| Description                                              | I/O Standard Attribute     | $R_{REF}$ ( $\Omega$ ) | $C_{REF}^{(1)}$ (pF) | $V_{MEAS}$ (V)   | $V_{REF}$ (V) |

**Notes:**

1.  $C_{REF}$  is the capacitance of the probe, nominally 0 pF.
2. Per PCI specifications.
3. The value given is the differential output voltage.
4. See the *BLVDS Output Termination* section in [UG381](#), *Spartan-6 FPGA SelectIO Resources User Guide*.
5. See the *TMDS\_33 Termination* section in [UG381](#), *Spartan-6 FPGA SelectIO Resources User Guide*.

## Simultaneously Switching Outputs

Due to package electrical parasitics, a given package supports a limited number of simultaneous switching outputs (SSOs) when using fast, high-drive outputs. [Table 33](#) and [Table 34](#) provide guidelines for the recommended maximum allowable number of SSOs. These guidelines describe the maximum number of user I/O pins of an output signal standard that should simultaneously switch in the same direction, while maintaining a safe level of switching noise for that particular signal standard. Meeting these guidelines for the stated test conditions ensures that the FPGA operates free from the adverse effects of GND and power bounce.

For each device/package combination, [Table 33](#) provides the number of equivalent  $V_{CCO}$ /GND pairs per bank. For each output signal standard and drive strength, [Table 34](#) recommends the maximum number of SSOs, switching in the same direction, allowed per  $V_{CCO}$ /GND pair within an I/O bank. The guidelines are categorized by package style, slew rate, and output drive current. The number of SSOs are also specified by I/O bank. Multiply the appropriate numbers from each table to calculate the maximum number of SSOs allowed within an I/O bank. The guidelines assume that all pins within a bank use the same I/O standard. Exceeding these SSO guidelines can result in increased power or GND bounce, degraded signal integrity, or increased system jitter. For a given I/O standard, if the SSO limit per pair in [Table 34](#) is greater than the maximum I/O per pair in [Table 33](#), then there is no SSO limit for the exclusive use of that I/O standard.

The recommended maximum SSO values assume that the FPGA is soldered on a printed circuit board and that the board uses sound design practices. Due to the additional inductance introduced by the socket, the SSO values do not apply for FPGAs mounted in sockets. The SSO values assume that the  $V_{CCAUX}$  is powered at 3.3V. Setting  $V_{CCAUX}$  to 2.5V provides better SSO characteristics. For more detail, see [UG381](#): *Spartan-6 FPGA SelectIO Resources User Guide*.

Table 34: SSO Limit per  $V_{CCO}/GND$  Pair (Cont'd)

| V <sub>CCO</sub> | I/O Standard   | Drive | Slew    | SSO Limit per V <sub>CCO</sub> /GND Pair                       |          |                                                                       |              |    |
|------------------|----------------|-------|---------|----------------------------------------------------------------|----------|-----------------------------------------------------------------------|--------------|----|
|                  |                |       |         | All TQG144, CPG196, CSG225, FT(G)256, and LX devices in CSG324 |          | All CS(G)484, FG(G)484, FG(G)676, FG(G)900, and LXT devices in CSG324 |              |    |
|                  |                |       |         | Bank 0/2                                                       | Bank 1/3 | Bank 0/2                                                              | Bank 1/3/4/5 |    |

Table 45: Device DNA Interface Port Switching Characteristics

| Symbol                             | Description                                            | Speed Grade |     |    |     | Units    |
|------------------------------------|--------------------------------------------------------|-------------|-----|----|-----|----------|
|                                    |                                                        | -3          | -3N | -2 | -1L |          |
| T <sub>DNASSU</sub>                | Setup time on SHIFT before the rising edge of CLK      | 7           |     |    |     | ns, Min  |
| T <sub>DNASH</sub>                 | Hold time on SHIFT after the rising edge of CLK        | 1           |     |    |     | ns, Min  |
| T <sub>DNADSU</sub>                | Setup time on DIN before the rising edge of CLK        | 7           |     |    |     | ns, Min  |
| T <sub>DNADH</sub>                 | Hold time on DIN after the rising edge of CLK          | 1           |     |    |     | ns, Min  |
| T <sub>DNARSU</sub>                | Setup time on READ before the rising edge of CLK       | 7           |     |    |     | ns, Min  |
|                                    |                                                        | 1,000       |     |    |     | ns, Max  |
| T <sub>DNARH</sub>                 | Hold time on READ after the rising edge of CLK         | 1           |     |    |     | ns, Min  |
| T <sub>DNADCKO</sub>               | Clock-to-output delay on DOUT after rising edge of CLK | 0.5         |     |    |     | ns, Min  |
|                                    |                                                        | 6           |     |    |     | ns, Max  |
| T <sub>DNACKF</sub> <sup>(2)</sup> | CLK frequency                                          | 2           |     |    |     | MHz, Max |
| T <sub>DNACKL</sub>                | CLK Low time                                           | 50          |     |    |     | ns, Min  |
| T <sub>DNACKH</sub>                | CLK High time                                          | 50          |     |    |     | ns, Min  |

**Notes:**

1. The minimum READ pulse width is 8 ns, the maximum READ pulse width is 1  $\mu$ s.
2. Also applies to TCK when reading DNA through the boundary-scan port.

Table 46: Suspend Mode Switching Characteristics

| Symbol                         | Description                                                                                                                                                          | Min | Max  | Units   |
|--------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|------|---------|
| <b>Entering Suspend Mode</b>   |                                                                                                                                                                      |     |      |         |
| T <sub>SUSPENDHIGH_AWAKE</sub> | Rising edge of SUSPEND pin to falling edge of AWAKE pin without glitch filter                                                                                        | 2.5 | 14   | ns      |
| T <sub>SUSPENDFILTER</sub>     | Adjustment to SUSPEND pin rising edge parameters when glitch filter enabled                                                                                          | 31  | 430  | ns      |
| T <sub>SUSPEND_GWE</sub>       | Rising edge of SUSPEND pin until FPGA output pins drive their defined SUSPEND constraint behavior (without glitch filter)                                            | –   | 15   | ns      |
| T <sub>SUSPEND_GTS</sub>       | Rising edge of SUSPEND pin to write-protect lock on all writable clocked elements (without glitch filter)                                                            | –   | 15   | ns      |
| T <sub>SUSPEND_DISABLE</sub>   | Rising edge of the SUSPEND pin to FPGA input pins and interconnect disabled (without glitch filter)                                                                  | –   | 1500 | ns      |
| <b>Exiting Suspend Mode</b>    |                                                                                                                                                                      |     |      |         |
| T <sub>SUSPENDLOW_AWAKE</sub>  | Falling edge of the SUSPEND pin to rising edge of the AWAKE pin. Does not include DCM or PLL lock time.                                                              | 7   | 75   | $\mu$ s |
| T <sub>SUSPEND_ENABLE</sub>    | Falling edge of the SUSPEND pin to FPGA input pins and interconnect re-enabled                                                                                       | 7   | 41   | $\mu$ s |
| T <sub>AWAKE_GWE1</sub>        | Rising edge of the AWAKE pin until write-protect lock released on all writable clocked elements, using <b>sw_clk:InternalClock</b> and <b>sw_gwe_cycle:1</b> .       | –   | 80   | ns      |
| T <sub>AWAKE_GWE512</sub>      | Rising edge of the AWAKE pin until write-protect lock released on all writable clocked elements, using <b>sw_clk:InternalClock</b> and <b>sw_gwe_cycle:512</b> .     | –   | 20.5 | $\mu$ s |
| T <sub>AWAKE_GTS1</sub>        | Rising edge of the AWAKE pin until outputs return to the behavior described in the FPGA application, using <b>sw_clk:InternalClock</b> and <b>sw_gts_cycle:1</b> .   | –   | 80   | ns      |
| T <sub>AWAKE_GTS512</sub>      | Rising edge of the AWAKE pin until outputs return to the behavior described in the FPGA application, using <b>sw_clk:InternalClock</b> and <b>sw_gts_cycle:512</b> . | –   | 20.5 | $\mu$ s |
| T <sub>SCP_AWAKE</sub>         | Rising edge of SCP pins to rising edge of AWAKE pin                                                                                                                  | 7   | 75   | $\mu$ s |

|                               | When using the DLL alone: The time from deassertion at the DCM's reset input to the rising transition at its LOCKED output. When the DCM is locked, the CLKIN and CLKFB signals are in phase.<br>CLKIN_FREQ_DLL > 50 MHz  | –           | 0.60 | –   | 0.60 | –   | 0.60 | –   | 0.60 | ms    |
| Delay Lines                   |                                                                                                                                                                                                                           |             |      |     |      |     |      |     |      |       |
| DCM_DELAY_STEP <sup>(5)</sup> | Finest delay resolution, averaged over all steps.                                                                                                                                                                         | 10          | 40   | 10  | 40   | 10  | 40   | 10  | 40   | ps    |

**Notes:**

1. The values in this table are based on the operating conditions described in Table 2 and Table 53.
2. Indicates the maximum amount of output jitter that the DCM adds to the jitter on the CLKIN input.
3. For optimal jitter tolerance and faster LOCK time, use the CLKIN\_PERIOD attribute.
4. Some jitter and duty-cycle specifications include 1% of input clock period or 0.01 UI. For example, this data sheet specifies a maximum jitter of  $\pm(1\% \text{ of CLKIN period} + 150 \text{ ps})$ . Assuming that the CLKIN frequency is 100 MHz, the equivalent CLKIN period is 10 ns. Since 1% of 10 ns is 0.1 ns or 100 ps, the maximum jitter is  $\pm(100 \text{ ps} + 150 \text{ ps}) = \pm 250 \text{ ps}$ .
5. A typical delay step size is 23 ps.
6. The timing analysis tools use the CLK\_FEEDBACK = 1X condition for the CLKIN\_CLKFB\_PHASE value (reported as phase error). When using CLK\_FEEDBACK = 2X, add 100 ps to the phase error for the CLKIN\_CLKFB\_PHASE value (as shown in this table).

Table 55: Recommended Operating Conditions for the Digital Frequency Synthesizer (DFS)<sup>(1)</sup>

| Symbol                                      | Description                                                                                  | Speed Grade |                    |     |                    |     |                    |     |                    | Units |

| Input Frequency Ranges <sup>(2)</sup>       |                                                                                              |             |                    |     |                    |     |                    |     |                    |       |
| CLKIN_FREQ_FX                               | Frequency for the CLKIN input. Also described as F <sub>CLKIN</sub> .                        | 0.5         | 375 <sup>(3)</sup> | 0.5 | 375 <sup>(3)</sup> | 0.5 | 333 <sup>(3)</sup> | 0.5 | 200 <sup>(3)</sup> | MHz   |
| Input Clock Jitter Tolerance <sup>(4)</sup> |                                                                                              |             |                    |     |                    |     |                    |     |                    |       |
| CLKIN_CYC_JITT_FX_LF                        | Cycle-to-cycle jitter at the CLKIN input, based on CLKFX output frequency: FCLKFX < 150 MHz. | –           | ±300               | –   | ±300               | –   | ±300               | –   | ±300               | ps    |
| CLKIN_CYC_JITT_FX_HF                        | Cycle-to-cycle jitter at the CLKIN input, based on CLKFX output frequency: FCLKFX > 150 MHz. | –           | ±150               | –   | ±150               | –   | ±150               | –   | ±150               | ps    |
| CLKIN_PER_JITT_FX                           | Period jitter at the CLKIN input.                                                            | –           | ±1                 | –   | ±1                 | –   | ±1                 | –   | ±1                 | ns    |

**Notes:**

1. DFS specifications apply when using either of the DFS outputs (CLKFX or CLKFX180).
2. When using both DFS and DLL outputs on the same DCM, follow the more restrictive CLKIN\_FREQ\_DLL specifications in Table 53.
3. The CLKIN\_DIVIDE\_BY\_2 attribute increases the effective input frequency range. When set to TRUE, the input clock frequency is divided by two as it enters the DCM. Input clock frequencies for the clock buffer being used can be increased up to the  $F_{\text{MAX}}$  (see Table 48 and Table 49 for BUFG and BUFGIO limits).
4. CLKIN input jitter beyond these limits can cause the DCM to lose LOCK.

Table 59: Switching Characteristics for the Phase-Shift Clock in Variable Phase Mode<sup>(1)</sup>

| Symbol                      | Description                                                                                                                                                                                                               | Amount of Phase Shift                                           | Units |
|-----------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------|-------|
| <b>Phase Shifting Range</b> |                                                                                                                                                                                                                           |                                                                 |       |
| MAX_STEPS <sup>(2)</sup>    | When CLKIN < 60 MHz, the maximum allowed number of DCM_DELAY_STEP steps for a given CLKIN clock period, where T = CLKIN clock period in ns. When using CLKIN_DIVIDE_BY_2 = TRUE, double the clock-effective clock period. | $\pm(\text{INTEGER}(10 \times (\text{TCLKIN} - 3 \text{ ns})))$ | steps |
|                             | When CLKIN ≥ 60 MHz, the maximum allowed number of DCM_DELAY_STEP steps for a given CLKIN clock period, where T = CLKIN clock period in ns. When using CLKIN_DIVIDE_BY_2 = TRUE, double the clock-effective clock period. | $\pm(\text{INTEGER}(15 \times (\text{TCLKIN} - 3 \text{ ns})))$ | steps |
| FINE_SHIFT_RANGE_MIN        | Minimum guaranteed delay for variable phase shifting.                                                                                                                                                                     | $\pm(\text{MAX\_STEPS} \times \text{DCM\_DELAY\_STEP\_MIN})$    | ps    |
| FINE_SHIFT_RANGE_MAX        | Maximum guaranteed delay for variable phase shifting                                                                                                                                                                      | $\pm(\text{MAX\_STEPS} \times \text{DCM\_DELAY\_STEP\_MAX})$    | ps    |

**Notes:**

- The values in this table are based on the operating conditions described in Table 53 and Table 58.
- The maximum variable phase shift range, MAX\_STEPS, is only valid when the DCM has no initial fixed-phase shifting, that is, the PHASE\_SHIFT attribute is set to 0.
- The DCM\_DELAY\_STEP values are provided at the end of Table 54.

Table 60: Miscellaneous DCM Timing Parameters<sup>(1)</sup>

| Symbol         | Description                           | Min | Max | Units        |
|----------------|---------------------------------------|-----|-----|--------------|
| DCM_RST_PW_MIN | Minimum duration of a RST pulse width | 3   | –   | CLKIN cycles |

**Notes:**

- This limit only applies to applications that use the DCM DLL outputs (CLK0, CLK90, CLK180, CLK270, CLK2X, CLK2X180, and CLKDV). The DCM DFS outputs (CLKFX, CLKFXDV, CLKFX180) are unaffected.

Table 61: Frequency Synthesis

| Attribute                   | Min | Max |
|-----------------------------|-----|-----|
| CLKFX_MULTIPLY (DCM_SP)     | 2   | 32  |
| CLKFX_DIVIDE (DCM_SP)       | 1   | 32  |
| CLKDV_DIVIDE (DCM_SP)       | 1.5 | 16  |
| CLKFX_MULTIPLY (DCM_CLKGEN) | 2   | 256 |
| CLKFX_DIVIDE (DCM_CLKGEN)   | 1   | 256 |
| CLKFXDV_DIVIDE (DCM_CLKGEN) | 2   | 32  |

**Notes:**

- Listed above are representative values where one global clock input drives one vertical clock line in each accessible column, and where all accessible IOB and CLB flip-flops are clocked by the global clock net.
- DCM output jitter is already included in the timing calculation.

Table 67: Global Clock Input to Output Delay With PLL in Source-Synchronous Mode

| Symbol                                                                                                                                | Description                            | Device     | Speed Grade |      |      |      | Units |

**Notes:**

1. Listed above are representative values where one global clock input drives one vertical clock line in each accessible column, and where all accessible IOB and CLB flip-flops are clocked by the global clock net.
2. PLL output jitter is included in the timing calculation.

Table 75: Global Clock Setup and Hold With PLL in Source-Synchronous Mode

**Notes:**

1. Setup and Hold times are measured over worst case conditions (process, voltage, temperature). Setup time is measured relative to the Global Clock input signal using the slowest process, highest temperature, and lowest voltage. Hold time is measured relative to the Global Clock input signal using the fastest process, lowest temperature, and highest voltage. These measurements include PLL CLKOUT0 jitter.
2. IFF = Input Flip-Flop or Latch
3. Use IBIS to determine any duty-cycle distortion incurred using various standards.

Table 77: Global Clock Setup and Hold With DCM and PLL in Source-Synchronous Mode

**Notes:**

- Setup and Hold times are measured over worst case conditions (process, voltage, temperature). Setup time is measured relative to the Global Clock input signal using the slowest process, highest temperature, and lowest voltage. Hold time is measured relative to the Global Clock input signal using the fastest process, lowest temperature, and highest voltage. The timing values were measured using the fine-phase adjustment feature of the DCM. These measurements include CMT jitter; DCM CLK0 driving PLL, PLL CLKOUT0 driving BUFG. Package skew is not included in these measurements.
- IFF = Input Flip-Flop

| 06/14/10 | 1.5     | <p>In <a href="#">Table 2</a>, added note 5 and added temperature range to <math>V_{FS}</math> and <math>R_{FUSE}</math>. Removed speed grade delineation, revised <math>I_{RPD}</math> description, and updated note 2 in <a href="#">Table 4</a>. Added note 2 to <a href="#">Table 7</a>. Added <math>DIFF\_MOBILE\_DDR</math> to <a href="#">Table 8</a> and <a href="#">Table 10</a>. Added note 4 to <a href="#">Table 15</a>. Changed minimum <math>DV_{PPIN}</math> in <a href="#">Table 16</a>. Updated <math>F_{GTPDRCLK}</math> in <a href="#">Table 19</a>. Increased maximum <math>T_{LLSKEW}</math> in <a href="#">Table 22</a>. Updated descriptions and added data to <a href="#">Table 23</a>. Removed note 1 and added new data to the Networking Applications section in <a href="#">Table 25</a>. Updated <a href="#">Table 26</a> and <a href="#">Table 27</a> to the data in ISE v12.1 software with speed specification v1.08. In <a href="#">Table 28</a>, added <math>DIFF\_MOBILE\_DDR</math> and updated -4 speed grade data. Updated the maximum I/O pairs per bank in <a href="#">Table 33</a>. Updated note 2 on <a href="#">Table 39</a>. Revised the <math>F_{MAX}</math> in <a href="#">Table 44</a>. In <a href="#">Table 47</a>, updated description for <math>T_{SMCKCSO}</math>, revised values for <math>T_{POR}</math> and added Min value, added <math>T_{BPIICCK}</math> and <math>T_{SPIICCK}</math>. Also in <a href="#">Table 47</a>, added device dependencies to <math>F_{SMCKCK}</math> and <math>F_{RBCKCK}</math>. Updated and added data to <a href="#">Table 63</a> through <a href="#">Table 78</a>, and <a href="#">Table 81</a>. In <a href="#">Table 79</a>, added data on the XC6SLX45-FG(G)676 and revised the XC6SLX45T and XC6SLX150T values.</p> <p>The following changes to this specification are addressed in the product change notice <a href="#">XC6SLX45-FG(G)676</a>, <i>MCB Performance and JTAG Revision Code for Spartan-6 LX16 and LX45 FPGAs</i>. In <a href="#">Table 2</a>, revised the <math>V_{CCINT}</math> to add the memory controller block extended performance specifications. In <a href="#">Table 25</a>, changed the standard specifications and added extended performance specifications for the memory controller block and note 2. Added note 4 and updated values in <a href="#">Table 34</a>.</p> |
| 06/24/10 | 1.6     | <p>Production release of XC6SLX45T (-2 and -3 speed grades), XC6SLX16 and XC6SLX45 (-3 speed grade) devices which includes changes to <a href="#">Table 26</a> and <a href="#">Table 27</a> (ISE v12.1 software with speed specification v1.08).</p> <p>Added the -3N speed grade, which designates Spartan-6 devices that do not support MCB functionality. This includes changes to <a href="#">Table 2</a> (note 2), <a href="#">Table 25</a> (note 4), and <a href="#">Switching Characteristics</a> (<a href="#">Table 26</a>).</p> <p>Updated <a href="#">Simultaneously Switching Outputs</a> discussion. Added -3 speed grade values for <math>T_{TAP}</math> and <math>F_{MINCAL}</math> values in <a href="#">Table 39</a>. In <a href="#">Table 40</a>, updated <math>T_{RPW}</math> (-2 and -3 speed grade) values and <math>F_{TOG}</math> (-3 speed grade) values. In <a href="#">Table 48</a>, updated <math>T_{GIO}</math> (-2 and -3 speed grade) values. Updated -3 values in spread spectrum section of <a href="#">Table 57</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| 07/16/10 | 1.7     | <p>Production release of specific devices listed in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v12.2 software with speed specification v1.11. Added note 4 advising designers of the patch which contains v1.11. Also updated the -1L speed specification to v1.04. Updated numerous -4 and -1L values. Added -4 <math>T_{TAP}</math> values and <math>F_{MINCAL}</math> to <a href="#">Table 39</a>. Revised <math>T_{CINCK}/T_{CKCIN}</math> in <a href="#">Table 40</a>. In <a href="#">Table 41</a>, revised <math>T_{SHCKO}</math>. In <a href="#">Table 42</a>, revised <math>T_{REQ}</math>. Added new -1L values to <a href="#">Table 47</a>. Added and updated values in <a href="#">Table 79</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 07/26/10 | 1.8     | <p>Production release of XC6SLX25, XC6SLX25T, XC6SLX100 and XC6SLX100T in the specific speed grades listed in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v12.2 software with speed specification v1.11. Added note 7 to <a href="#">Table 2</a> and moved <math>V_{FS}</math> and <math>R_{FUSE}</math> to a new <a href="#">Table 3</a>. Added <math>I_{HS}</math> and note 4 to <a href="#">Table 4</a>. Added note 1 to <a href="#">Table 28</a>. Added and updated SSO limits per <math>V_{CCO}/GND</math> pairs in <a href="#">Table 34</a>. Added note 3 to <a href="#">Table 47</a>. In <a href="#">Table 54</a>, removed -1L specifications for <math>CLKOUT\_PER\_JITT\_DV1/2</math> and revised <math>CLKIN\_CLKFB\_PHASE</math> and <math>CLKOUT\_PHASE\_DLL</math> values. Updated note 3 in both <a href="#">Table 56</a> and <a href="#">Table 57</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| 08/23/10 | 1.9     | <p>Updated values for <math>F_{GTPRANGE1}</math>, <math>F_{GTPRANGE2}</math>, and <math>F_{GPLLMIN}</math> in <a href="#">Table 18</a>. Revised -3 and -4 values in <a href="#">Table 21</a>. Removed the -1L speed grade readback support restriction and note 3 in <a href="#">Table 47</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| 11/05/10 | 1.10    | <p>Production release of XC6SLX4 and XC6SLX9 in the specific speed grades listed in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v12.3 software with speed specification v1.12 for the -2 speed grade available in the 12.3 <i>Speed Files Patch</i>. Added note 3 advising designers of the patch which contains v1.12.</p> <p>In <a href="#">Table 2</a>, added note 4. In <a href="#">Table 4</a>, added note 2. In <a href="#">Table 10</a>, added notes 2 and 3. In <a href="#">Table 44</a>, added note 2. In <a href="#">Table 47</a>, updated symbol for <math>T_{SMWCKCK}/T_{SMCKCKW}</math>, changed -1L values for <math>T_{USERCCLKH}</math> and <math>T_{USERCCLKL}</math>, and added and revised the modes for <math>F_{MCKCK}</math> and <math>F_{SMCKCK}</math>. In <a href="#">Table 53</a>, redefined and expanded description for <math>CLKIN\_FREQ\_DLL</math> and rewrote note 3. Updated title of <a href="#">Table 58</a>. Also in <a href="#">Table 78</a>, revised <math>T_{DCD\_CLK}</math> for XC6SLX150 and XC6SLX150T. Changed description of <math>T_{PSFD}/T_{PHFD}</math> in <a href="#">Table 71</a>.</p> <p>For the -1L speed grade, updated data sheet to ISE 12.3 software with speed specification v1.05 which revised the values in the following tables: <a href="#">Table 25</a>, <a href="#">Table 28</a>, <a href="#">Table 35</a>, <a href="#">Table 36</a>, <a href="#">Table 37</a>, <a href="#">Table 40</a> through <a href="#">Table 43</a>, <a href="#">Table 48</a> through <a href="#">Table 56</a>, <a href="#">Table 62</a> through <a href="#">Table 78</a>, <a href="#">Table 80</a>, and <a href="#">Table 81</a>. Updated <a href="#">Notice of Disclaimer</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| Date     | Version | Description of Revisions                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| 01/10/11 | 1.11    | <p>Production release of XC6SLX4 and XC6SLX9 in the specific speed grades listed in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v12.4 software with speed specification v1.15 for the -4, -3, -3N, and -2 speed grades. Added note 3 to <a href="#">Table 27</a>. Also updated the -1L speed grade requirements to ISE v12.4 software with speed specification v1.06. Revised -3N definition throughout the document.</p> <p>Added note 4 to <a href="#">Table 2</a> and updated note 5. Added information on <math>V_{CCINT}</math> to note 1 in <a href="#">Table 5</a>. Updated Networking Applications -3 values in <a href="#">Table 25</a> to match improvements made in ISE v12.4. In <a href="#">Table 28</a>, added note 1 and revised the <math>T_{IOTP}</math> values for LVDS_33, LVDS_25, MINI_LVDS_33, MINI_LVDS_25, RSDS_33, RSDS_25, TMDS_33, PPDS_33, and PPDS_25. Added note 3 to <a href="#">Table 55</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| 02/11/11 | 1.12    | <p>As described in <a href="#">XCEN11008: Product Discontinuation Notice For Spartan-6 LXT -4 Devices</a>, the -4 speed specifications have been discontinued. As outlined in page 2 of the XCN, designers currently using -4 speed specifications should rerun timing analysis using the new -3 speed specifications before moving to a replacement device.</p> <p>Updated the networking applications section of <a href="#">Table 25</a>. Updated -2 speed specifications throughout document and added note 3 to <a href="#">Table 27</a> advising designers to use the -2 speed specification update (v1.17) with the ISE 12.4 software patch. Added <math>F_{CLKDIV}</math> to <a href="#">Table 37</a> and <a href="#">Table 38</a>. Updated note 2 in <a href="#">Table 39</a>. Updated units for <math>T_{SMCKCSO}</math> and <math>T_{BPICCO}</math> in <a href="#">Table 47</a>. Updated -1L in <a href="#">Table 71</a>. Removed Note 2: <i>Package delay information is available for these device/package combinations. This information can be used to deskew the package</i> from <a href="#">Table 79</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| 03/31/11 | 2.0     | <p>Production release of XC6SLX45 in the -1L speed grades listed in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v13.1 software with -1L speed specification v1.06.</p> <p>In <a href="#">Table 39</a>, removed values in the -1L column and added note 3 as IODELAY2 only supports Tap0 for lower-power devices. Updated copyright <a href="#">page 1</a> and <a href="#">Notice of Disclaimer</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| 05/20/11 | 2.1     | <p>Production release of XC6SLX100 and XC6SLX150 in the specific speed grades listed in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v13.1 software with -1L speed specification v1.06. Updated <a href="#">Table 27</a> and <a href="#">Note 7</a> with changes per <a href="#">XCEN11012: Speed File Change for -3N Devices</a>. Revised <a href="#">Switching Characteristics</a> section for speed specifications: v1.18 for -3, -3N, and -2; including improvements in <a href="#">Table 73</a> through <a href="#">Table 77</a> and <a href="#">Table 81</a>.</p> <p>Removed <i>Memory Controller Block</i> from the performance heading in <a href="#">Table 2</a> and revised <a href="#">Note 2</a>. In <a href="#">Table 4</a>, added <a href="#">Note 1</a> to <math>C_{IN}</math> and updated the description of <math>R_{IN\_TERM}</math>. Updated <a href="#">Note 1</a> in <a href="#">Table 5</a>. Updated <a href="#">Note 1</a> of <a href="#">Table 7</a>. In <a href="#">Table 25</a>, added and removed -1L specifications, increased the standard performance DDR3 specifications, removed the extended performance DDR3 row and updated <a href="#">Note 3</a> and <a href="#">Note 4</a>. Clarified the introductory information for <a href="#">Table 28</a> and <a href="#">Table 30</a>.</p> <p>In <a href="#">Table 32</a>: Revised <math>V_{MEAS}</math> value for LVCMOS12; revised <math>V_{REF}</math> for LVDS_25, LVDS_33, BLVDS_25, MINI_LVDS_25, MINI_LVDS_33, RSDS_25, and RSDS_33; revised <math>R_{REF}</math> for BLVDS_25 and TMDS_33; and added <a href="#">Note 4</a> and <a href="#">Note 5</a>. Updated <a href="#">Note 2</a> and <a href="#">Note 3</a> in <a href="#">Table 39</a>.</p> <p>In <a href="#">Table 47</a>, revised the values and description of <math>T_{POR}</math> including adding <a href="#">Note 3</a>. Also in <a href="#">Table 47</a>, augmented the description and added specifications for <math>F_{RBCKK}</math> and removed XC6SLX4 from <math>F_{MCCK}</math> (maximum frequency, parallel mode (Master SelectMAP/BPI)). Added BUFGMUX to <a href="#">Table 48</a> title. Added <a href="#">Table 50</a>.</p> <p>In <a href="#">Table 52</a>, revised specifications for <math>T_{EXTFVAR}</math> and <math>F_{INJITTER}</math>. In <a href="#">Table 54</a> removed the 5 MHz &lt; CLKIN_FREQ_DLL parameter in the LOCK_DLL description. In both <a href="#">Table 56</a> and <a href="#">Table 57</a>, removed the 5 MHz &lt; <math>F_{CLKIN}</math> parameter in the LOCK_FX description. In <a href="#">Table 58</a>, updated description for PSCLK_FREQ and PSCLK_PULSE.</p> <p>Revised title and symbol of <a href="#">Table 70</a>, added new speed specifications for -1L, and added <a href="#">Note 2</a>. Added <a href="#">Table 71</a>.</p> |
| 07/11/11 | 2.2     | <p>Added the Automotive XA Spartan-6 and Defense-grade Spartan-6Q devices to all appropriate tables while sometimes removing the XC6S nomenclature. Added expanded temperature range (Q) to all appropriate tables. Updated <math>T_{SOL}</math> packages in <a href="#">Table 1</a>. Added <math>R_{OUT\_TERM}</math> to <a href="#">Table 4</a>. Updated <a href="#">Note 2</a> on <a href="#">Table 13</a>.</p> <p>Production release of the XC6SLX4, XC6SLX9, XC6SLX16, XC6SLX25, XC6SLX75, XQ6SLX75, and XQ6SLX150 in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v13.2 software with -1L speed specification v1.07.</p> <p>Production release of the XA6SLX16, XA6SLX25T, XA6SLX45, XA6SLX45T, XQ6SLX75, XQ6SLX75T, XQ6SLX150, and XQ6SLX150T in <a href="#">Table 26</a> and <a href="#">Table 27</a> using ISE v13.2 software with -2 and -3 speed specification v1.19.</p> <p>Added <a href="#">Table 29: IOB Switching Characteristics for the Automotive XA Spartan-6 and the Spartan-6Q Devices(1)</a>. Updated CS(G)484 from CSG484 throughout data sheet. Clarified <a href="#">Note 3</a> in <a href="#">Table 39</a>.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
