Understanding [Embedded - Microprocessors](#)

Embedded microprocessors are specialized computing chips designed to perform specific tasks within an embedded system. Unlike general-purpose microprocessors found in personal computers, embedded microprocessors are tailored for dedicated functions within larger systems, offering optimized performance, efficiency, and reliability. These microprocessors are integral to the operation of countless electronic devices, providing the computational power necessary for controlling processes, handling data, and managing communications.

Applications of [Embedded - Microprocessors](#)

Embedded microprocessors are utilized across a broad spectrum of applications, making them indispensable in

Table 2 lists recommended operational voltage conditions.

Table 2. Recommended Operating Conditions¹

Rating	Symbol	Value			Unit
Core supply voltage	VDD	1.7 – 1.9 ²	1.7–2.1 ³	1.9 – 2.2 ⁴	V
PLL supply voltage	VCCSYN	1.7 – 1.9 ²	1.7–2.1 ³	1.9 – 2.2 ⁴	V
I/O supply voltage	VDDH	3.135 – 3.465			V
Input voltage	VIN	GND (–0.3) – 3.465			V
Junction temperature (maximum)	T _j	105 ⁵			°C
Ambient temperature	T _A	0–70 ⁵			°C

¹ **Caution:** These are the recommended and tested operating conditions. Proper device operating outside of these conditions is not guaranteed.

² CPU frequency less than or equal to 200 MHz.

³ CPU frequency greater than 200 MHz but less than 233 MHz.

⁴ CPU frequency greater than or equal to 233 MHz.

⁵ Note that for extended temperature parts the range is (–40)_{T_A} – 105_{T_j}.

NOTE: Core, PLL, and I/O Supply Voltages

VDDH, VCCSYN, and VDD must track each other and both must vary in the same direction—in the positive direction (+5% and +0.1 Vdc) or in the negative direction (–5% and –0.1 Vdc).

This device contains circuitry protecting against damage due to high static voltage or electrical fields; however, it is advised that normal precautions be taken to avoid application of any voltages higher than maximum-rated voltages to this high-impedance circuit. Reliability of operation is enhanced if unused inputs are tied to an appropriate logic voltage level (either GND or V_{CC}).

Figure 2 shows the undershoot and overshoot voltage of the 60x and local bus memory interface of the MPC8280. Note that in PCI mode the I/O interface is different.

NOTE

Activating data pipelining (setting BRx[DR] in the memory controller) improves the AC timing. When data pipelining is activated, sp12 can be used for data bus setup even when ECC or PARITY are used. Also, sp33a can be used as the AC specification for DP signals.

3 Clock Configuration Modes

To configure the main PLL multiplication factor and the core, CPM, and 60x bus frequencies, the MODCK[1–3] pins are sampled while $\overline{\text{HRESET}}$ is asserted. Table 13 lists the eight basic configuration modes. Table 14 lists the other modes that are available by using the configuration pin ($\overline{\text{RSTCONF}}$) and driving four bits from hardware configuration word on the data bus.

Note that the MPC8265 and the MPC8266 have two additional clocking modes—PCI agent and PCI host. Refer to Section 3.2, “PCI Mode” on page 26 for information.

NOTE

Clock configurations change only after $\overline{\text{POR}}$ is asserted.

3.1 Local Bus Mode

Table 13 describes default clock modes for the MPC826xA.

Table 14 describes all possible clock configurations when using the hard reset configuration sequence. Note that basic modes are shown in boldface type. The frequencies listed are for the purpose of illustration only. Users must select a mode and input bus frequency so that the resulting configuration does not exceed the frequency rating of the user’s device.

¹ Because of speed dependencies, not all of the possible configurations in Table 14 are applicable.

² The user should choose the input clock frequency and the multiplication factors such that the frequency of the CPU is equal to or greater than 150 MHz and the CPM ranges between 66–233 MHz.

³ Input clock frequency is given only for the purpose of reference. The user should set MODCK_H–MODCK_L so that the resulting configuration does not exceed the frequency rating of the user's part.

3.2 PCI Mode

The MPC8265 and the MPC8266 have three clocking modes: local, PCI host, and PCI agent. The clocking mode is set according to three input pins—PCI_MODE, PCI_CFG[0], PCI_MODCK—as shown in Table 15.

Table 15. MPC8265 and MPC8266 Clocking Modes

Pins			Clocking Mode	PCI Clock Frequency Range (MHz)
PCI_MODE	PCI_CFG[0]	PCI_MODCK		
1	—	—	Local bus	—
0	0	0	PCI host	50–66
0	0	1		25–50
0	1	0	PCI agent	50–66
0	1	1		25–50

In addition, note the following:

NOTE: PCI_MODCK

In PCI mode only, PCI_MODCK comes from the LGPL5 pin and MODCK_H[0–3] comes from {LGPL0, LGPL1, LGPL2, LGPL3}.

NOTE: Tval (Output Hold)

The minimum Tval = 2 when PCI_MODCK = 1, and the minimum Tval = 1 when PCI_MODCK = 0. Therefore, designers should use clock configurations that fit this condition to achieve PCI-compliant AC timing.

NOTE

Clock configurations change only after $\overline{\text{POR}}$ is asserted.

¹ Input clock frequency is given only for the purpose of reference. User should set MODCK_H–MODCK_L so that the resulting configuration does not exceed the frequency rating of the user's part.

² The frequency depends on the value of PCI_MODCK. If PCI_MODCK is high (logic '1'), the PCI frequency is divided by 2 (33 instead of 66 MHz, etc.). Refer to [Table 15](#).

³ In this mode, PCI_MODCK must be "0".

The frequencies listed in [Table 18](#) and [Table 19](#) are for the purpose of illustration only. Users must select a mode and input bus frequency so that the resulting configuration does not exceed the frequency rating of the user's device.

6 Ordering Information

Figure 16 provides an example of the Freescale part numbering nomenclature for the MPC826xA. In addition to the processor frequency, the part numbering scheme also consists of a part modifier that indicates any enhancement(s) in the part from the original production design. Each part number also contains a revision code that refers to the die mask revision number and is specified in the part numbering scheme for identification purposes only. For more information, contact your local Freescale sales office.
