

Welcome to [E-XFL.COM](#)

What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "[Embedded - Microcontrollers](#)"

Details

Product Status	Active
Core Processor	ARM® Cortex®-M3
Core Size	32-Bit Single-Core
Speed	48MHz
Connectivity	I²C, IrDA, SmartCard, SPI, UART/USART, USB
Peripherals	Brown-out Detect/Reset, DMA, POR, PWM, WDT
Number of I/O	53
Program Memory Size	512KB (512K x 8)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	128K x 8
Voltage - Supply (Vcc/Vdd)	1.98V ~ 3.8V
Data Converters	A/D 8x12b; D/A 2x12b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	64-VFQFN Exposed Pad
Supplier Device Package	64-QFN (9x9)
Purchase URL	https://www.e-xfl.com/product-detail/silicon-labs/efm32gg330f512g-e-qfn64r

2.1.18 Low Energy Timer (LETIMER)

The unique LETIMER™, the Low Energy Timer, is a 16-bit timer that is available in energy mode EM2 in addition to EM1 and EM0. Because of this, it can be used for timing and output generation when most of the device is powered down, allowing simple tasks to be performed while the power consumption of the system is kept at an absolute minimum. The LETIMER can be used to output a variety of waveforms with minimal software intervention. It is also connected to the Real Time Counter (RTC), and can be configured to start counting on compare matches from the RTC.

2.1.19 Pulse Counter (PCNT)

The Pulse Counter (PCNT) can be used for counting pulses on a single input or to decode quadrature encoded inputs. It runs off either the internal LFACLK or the PCNTn_S0IN pin as external clock source. The module may operate in energy mode EM0 - EM3.

2.1.20 Analog Comparator (ACMP)

The Analog Comparator is used to compare the voltage of two analog inputs, with a digital output indicating which input voltage is higher. Inputs can either be one of the selectable internal references or from external pins. Response time and thereby also the current consumption can be configured by altering the current supply to the comparator.

2.1.21 Voltage Comparator (VCMP)

The Voltage Supply Comparator is used to monitor the supply voltage from software. An interrupt can be generated when the supply falls below or rises above a programmable threshold. Response time and thereby also the current consumption can be configured by altering the current supply to the comparator.

2.1.22 Analog to Digital Converter (ADC)

The ADC is a Successive Approximation Register (SAR) architecture, with a resolution of up to 12 bits at up to one million samples per second. The integrated input mux can select inputs from 8 external pins and 6 internal signals.

2.1.23 Digital to Analog Converter (DAC)

The Digital to Analog Converter (DAC) can convert a digital value to an analog output voltage. The DAC is fully differential rail-to-rail, with 12-bit resolution. It has two single ended output buffers which can be combined into one differential output. The DAC may be used for a number of different applications such as sensor interfaces or sound output.

2.1.24 Operational Amplifier (OPAMP)

The EFM32GG330 features 3 Operational Amplifiers. The Operational Amplifier is a versatile general purpose amplifier with rail-to-rail differential input and rail-to-rail single ended output. The input can be set to pin, DAC or OPAMP, whereas the output can be pin, OPAMP or ADC. The current is programmable and the OPAMP has various internal configurations such as unity gain, programmable gain using internal resistors etc.

2.1.25 Low Energy Sensor Interface (LESENSE)

The Low Energy Sensor Interface (LESENSE™), is a highly configurable sensor interface with support for up to 16 individually configurable sensors. By controlling the analog comparators and DAC, LESENSE is capable of supporting a wide range of sensors and measurement schemes, and can for instance measure LC sensors, resistive sensors and capacitive sensors. LESENSE also includes a programmable FSM which enables simple processing of measurement results without CPU intervention. LESENSE is

available in energy mode EM2, in addition to EM0 and EM1, making it ideal for sensor monitoring in applications with a strict energy budget.

2.1.26 Backup Power Domain

The backup power domain is a separate power domain containing a Backup Real Time Counter, BURTC, and a set of retention registers, available in all energy modes. This power domain can be configured to automatically change power source to a backup battery when the main power drains out. The backup power domain enables the EFM32GG330 to keep track of time and retain data, even if the main power source should drain out.

2.1.27 Advanced Encryption Standard Accelerator (AES)

The AES accelerator performs AES encryption and decryption with 128-bit or 256-bit keys. Encrypting or decrypting one 128-bit data block takes 52 HFCORECLK cycles with 128-bit keys and 75 HFCORECLK cycles with 256-bit keys. The AES module is an AHB slave which enables efficient access to the data and key registers. All write accesses to the AES module must be 32-bit operations, i.e. 8- or 16-bit operations are not supported.

2.1.28 General Purpose Input/Output (GPIO)

In the EFM32GG330, there are 52 General Purpose Input/Output (GPIO) pins, which are divided into ports with up to 16 pins each. These pins can individually be configured as either an output or input. More advanced configurations like open-drain, filtering and drive strength can also be configured individually for the pins. The GPIO pins can also be overridden by peripheral pin connections, like Timer PWM outputs or USART communication, which can be routed to several locations on the device. The GPIO supports up to 16 asynchronous external pin interrupts, which enables interrupts from any pin on the device. Also, the input value of a pin can be routed through the Peripheral Reflex System to other peripherals.

2.2 Configuration Summary

The features of the EFM32GG330 is a subset of the feature set described in the EFM32GG Reference Manual. Table 2.1 (p. 7) describes device specific implementation of the features.

Table 2.1. Configuration Summary

Module	Configuration	Pin Connections
Cortex-M3	Full configuration	NA
DBG	Full configuration	DBG_SWCLK, DBG_SWDIO, DBG_SWO
MSC	Full configuration	NA
DMA	Full configuration	NA
RMU	Full configuration	NA
EMU	Full configuration	NA
CMU	Full configuration	CMU_OUT0, CMU_OUT1
WDOG	Full configuration	NA
PRS	Full configuration	NA
USB	Full configuration	USB_VBUS, USB_VBUSEN, USB_VREGI, USB_VREGO, USB_DM, USB_DMPU, USB_DP, USB_ID

3.4 Current Consumption

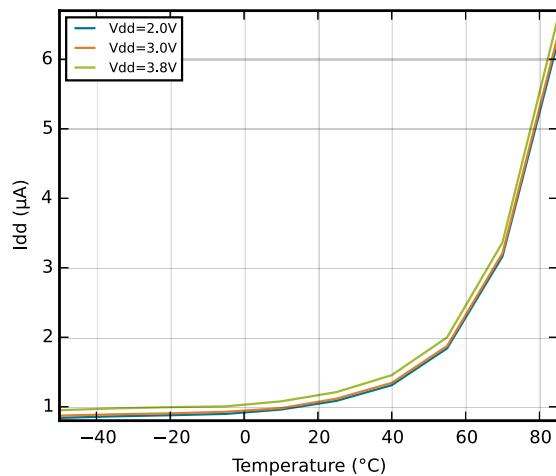

Table 3.3. Current Consumption

Symbol	Parameter	Condition	Min	Typ	Max	Unit
I_{EM0}	EM0 current. No prescaling. Running prime number calculation code from flash. (Production test condition = 14MHz)	48 MHz HFXO, all peripheral clocks disabled, $V_{DD} = 3.0$ V		219	240	$\mu A / MHz$
		28 MHz HFRCO, all peripheral clocks disabled, $V_{DD} = 3.0$ V		205	225	$\mu A / MHz$
		21 MHz HFRCO, all peripheral clocks disabled, $V_{DD} = 3.0$ V		206	229	$\mu A / MHz$
		14 MHz HFRCO, all peripheral clocks disabled, $V_{DD} = 3.0$ V		209	232	$\mu A / MHz$
		11 MHz HFRCO, all peripheral clocks disabled, $V_{DD} = 3.0$ V		211	234	$\mu A / MHz$
		6.6 MHz HFRCO, all peripheral clocks disabled, $V_{DD} = 3.0$ V		215	242	$\mu A / MHz$
		1.2 MHz HFRCO, all peripheral clocks disabled, $V_{DD} = 3.0$ V		243	327	$\mu A / MHz$
I_{EM1}	EM1 current (Production test condition = 14MHz)	48 MHz HFXO, all peripheral clocks disabled, $V_{DD} = 3.0$ V		80	90	$\mu A / MHz$
		28 MHz HFRCO, all peripheral clocks disabled, $V_{DD} = 3.0$ V		80	90	$\mu A / MHz$
		21 MHz HFRCO, all peripheral clocks disabled, $V_{DD} = 3.0$ V		81	91	$\mu A / MHz$
		14 MHz HFRCO, all peripheral clocks disabled, $V_{DD} = 3.0$ V		83	99	$\mu A / MHz$
		11 MHz HFRCO, all peripheral clocks disabled, $V_{DD} = 3.0$ V		85	100	$\mu A / MHz$
		6.6 MHz HFRCO, all peripheral clocks disabled, $V_{DD} = 3.0$ V		90	102	$\mu A / MHz$
		1.2 MHz HFRCO, all peripheral clocks disabled, $V_{DD} = 3.0$ V		122	152	$\mu A / MHz$
I_{EM2}	EM2 current	EM2 current with RTC prescaled to 1 Hz, 32.768 kHz LFRCO, $V_{DD} = 3.0$ V, $T_{AMB} = 25^\circ C$		1.1 ¹	1.9 ¹	μA
		EM2 current with RTC prescaled to 1 Hz, 32.768 kHz LFRCO, $V_{DD} = 3.0$ V, $T_{AMB} = 85^\circ C$		8.8 ¹	21.5 ¹	μA
I_{EM3}	EM3 current	$V_{DD} = 3.0$ V, $T_{AMB} = 25^\circ C$		0.8 ¹	1.5 ¹	μA
		$V_{DD} = 3.0$ V, $T_{AMB} = 85^\circ C$		8.2 ¹	20.3 ¹	μA
I_{EM4}	EM4 current	$V_{DD} = 3.0$ V, $T_{AMB} = 25^\circ C$		0.02	0.08	μA
		$V_{DD} = 3.0$ V, $T_{AMB} = 85^\circ C$		0.5	2.5	μA

¹Only one RAM block enabled. The RAM block size is 32 kB.

6 Chip Marking, Revision and Errata

6.1 Chip Marking

In the illustration below package fields and position are shown.

Figure 6.1. Example Chip Marking (top view)

6.2 Revision

The revision of a chip can be determined from the "Revision" field in Figure 6.1 (p. 62) .

6.3 Errata

Please see the errata document for EFM32GG330 for description and resolution of device erratas. This document is available in Simplicity Studio and online at:
<http://www.silabs.com/support/pages/document-library.aspx?p=MCUs--32-bit>

7.10 Revision 0.91

March 21th, 2011

Added new alternative locations for SWO.

Added new USB Pin to pinout table.

Corrected slew rate data for Opamps.

7.11 Revision 0.90

February 4th, 2011

Initial preliminary release.
