Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Programming/Erasure Specifications

Table 9. Programming/Erasure Specifications for Intel MAX 10 Devices

This table shows the programming cycles and data retention duration of the user flash memory (UFM) and configuration flash memory (CFM) blocks.

For more information about data retention duration with 10,000 programming cycles for automotive temperature devices, contact your Intel quality representative.

Erase and reprogram cycles (E/P) (8) (Cycles/page)	Temperature (°C)	Data retention duration (Years)

OCT Variation after Calibration at Device Power-Up

The OCT resistance may vary with the variation of temperature and voltage after calibration at device power-up.

Use the following table and equation to determine the final OCT resistance considering the variations after calibration at device power-up.

- Subscript x refers to both V and T.
- ΔR_V is variation of resistance with voltage.
- ΔR_T is variation of resistance with temperature.
- dR/dT is the change percentage of resistance with temperature after calibration at device power-up.
- dR/dV is the change percentage of resistance with voltage after calibration at device power-up.
- V_1 is the initial voltage.
- V_2 is final voltage.

The following figure shows the example to calculate the change of 50 Ω I/O impedance from 25°C at 3.0 V to 85°C at 3.15 V.

Figure 2. Example for OCT Resistance Calculation after Calibration at Device Power-Up

$$\Delta R_V = (3.15 - 3) \times 1000 \times -0.027 = -4.05$$

$$\Delta R_T = (85 - 25) \times 0.25 = 15$$

Because ΔR_V is negative,

$$MF_V = 1/(4.05/100 + 1) = 0.961$$

Because ΔR_T is positive,

$$MF_T = 15/100 + 1 = 1.15$$

$$MF = 0.961 \times 1.15 = 1.105$$

$$R_{final} = 50 \times 1.105 = 55.25\Omega$$

Internal Weak Pull-Up Resistor

(9) Dedicated LVDS output buffer is only available at bottom I/O banks.

(10) ADC pins are only available at left I/O banks.

(11) When V_{REF} pin is used as regular input or output, F_{max} performance is reduced due to higher pin capacitance. Using the V_{REF} pin capacitance specification from device datasheet, perform SI analysis on your board setup to determine the F_{max} of your system.

(12) 10M40 and 10M50 devices have dual purpose clock input pins at top/bottom I/O banks.

Single-Ended I/O Standards Specifications

Table 20. Single-Ended I/O Standards Specifications for Intel MAX 10 Devices

To meet the I_{OL} and I_{OH} specifications, you must set the current strength settings accordingly. For example, to meet the 3.3-V LVTTL specification (4 mA), you should set the current strength settings to 4 mA. Setting at lower current strength may not meet the I_{OL} and I_{OH} specifications in the datasheet.

(29) The VCO frequency reported by the Intel Quartus Prime software in the PLL summary section of the compilation report takes into consideration the VCO post-scale counter K value. Therefore, if the counter K has a value of 2, the frequency reported can be lower than the f_{VCO} specification.

(30) A high input jitter directly affects the PLL output jitter. To have low PLL output clock jitter, you must provide a clean clock source, which is less than 200 ps.

(31) Peak-to-peak jitter with a probability level of 10^{-12} (14 sigma, 99.99999999974404% confidence level). The output jitter specification applies to the intrinsic jitter of the PLL, when an input jitter of 30 ps is applied.
