What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Note 1. Time until the clock can be used after the main clock oscillator stop bit (MOSCCR.MOSTP) is set to 0 (operating) when the external clock is stable.

Note 2. Reference values when an 8-MHz oscillator is used.

When specifying the main clock oscillator stabilization time, set the MOSCWTCR register with a stabilization time value that is equal to or greater than the oscillator-manufacturer-recommended value.

After changing the setting of the MOSCCR.MOSTP bit so that the main clock oscillator operates, read the OSCOVFSR.MOOVF flag to confirm that it has become 1, and then start using the main clock.

Note 3. After changing the setting of the SOSCCR.SOSTP bit or RCR3.RTCEN bit so that the sub-clock oscillator operates, only start using the sub-clock after the sub-clock oscillation stabilization wait time that is equal to or greater than the oscillator-manufacturer-recommended value has elapsed.

Reference value when a 32.768-kHz resonator is used.

Note 4. Only 32.768 kHz can be used.

Normal-precision channel	AN008 to AN015		
Internal reference voltage input channel	Internal reference voltage	AVCC0 = 2.0 to 3.6 V	
Temperature sensor input channel	Temperature sensor output	AVCC0 = 2.0 to 3.6 V	

Table 5.39 A/D Internal Reference Voltage Characteristics

Conditions: $2.0 \text{ V} \leq \text{VCC} \leq 3.6 \text{ V}$, $2.0 \text{ V} \leq \text{AVCC0} \leq 3.6 \text{ V}^*{}^1$, $\text{VSS} = \text{AVSS0} = \text{VREFL0} = 0 \text{ V}$, $T_a = -40 \text{ to } +105^\circ\text{C}$

Item	Min.	Typ.	Max.	Unit	Test Conditions
