

Welcome to [E-XFL.COM](https://www.e-xfl.com)

### What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

### Applications of "[Embedded - Microcontrollers](#)"

#### Details

|                            |   |
|----------------------------|---|
| Product Status             | Active  |
| Core Processor             | AVR   |
| Core Size                  | 8-Bit   |
| Speed                      | 20MHz   |
| Connectivity               | USI   |
| Peripherals                | Brown-out Detect/Reset, POR, PWM, WDT   |
| Number of I/O              | 12  |
| Program Memory Size        | 4KB (2K x 16)   |
| Program Memory Type        | FLASH   |
| EEPROM Size                | 256 x 8   |
| RAM Size                   | 256 x 8   |
| Voltage - Supply (Vcc/Vdd) | 2.7V ~ 5.5V   |
| Data Converters            | A/D 8x10b   |
| Oscillator Type            | Internal  |
| Operating Temperature      | -40°C ~ 85°C (TA)   |
| Mounting Type              | Surface Mount   |
| Package / Case             | 14-SOIC (0.154", 3.90mm Width)  |
| Supplier Device Package    | 14-SOIC   |
| Purchase URL               | <a href="https://www.e-xfl.com/product-detail/microchip-technology/attiny44-20ssu">https://www.e-xfl.com/product-detail/microchip-technology/attiny44-20ssu</a> |

Port B also serves the functions of various special features of the ATtiny24/44/84 as listed in [Section 10.2 “Alternate Port Functions” on page 58](#).

#### **1.1.4     RESET**

Reset input. A low level on this pin for longer than the minimum pulse length will generate a reset, even if the clock is not running and provided the reset pin has not been disabled. The minimum pulse length is given in [Table 20-4 on page 177](#). Shorter pulses are not guaranteed to generate a reset.

The reset pin can also be used as a (weak) I/O pin.

#### **1.1.5     Port A (PA7:PA0)**

Port A is a 8-bit bi-directional I/O port with internal pull-up resistors (selected for each bit). The Port A output buffers have symmetrical drive characteristics with both high sink and source capability. As inputs, Port A pins that are externally pulled low will source current if the pull-up resistors are activated. The Port A pins are tri-stated when a reset condition becomes active, even if the clock is not running.

Port A has alternate functions as analog inputs for the ADC, analog comparator, timer/counter, SPI and pin change interrupt as described in [“Alternate Port Functions” on page 58](#).

## 2. Overview

ATtiny24/44/84 is a low-power CMOS 8-bit microcontroller based on the AVR enhanced RISC architecture. By executing powerful instructions in a single clock cycle, the ATtiny24/44/84 achieves throughputs approaching 1 MIPS per MHz allowing the system designer to optimize power consumption versus processing speed.

**Figure 2-1.** Block Diagram

The AVR core combines a rich instruction set with 32 general purpose working registers. All 32 registers are directly connected to the Arithmetic Logic Unit (ALU), allowing two independent registers to be accessed in one single instruction executed in one clock cycle. The resulting architecture is more code efficient while achieving throughputs up to ten times faster than conventional CISC microcontrollers.

The ATtiny24/44/84 provides the following features: 2/4/8K byte of In-System Programmable Flash, 128/256/512 bytes EEPROM, 128/256/512 bytes SRAM, 12 general purpose I/O lines, 32 general purpose working registers, an 8-bit Timer/Counter with two PWM channels, a 16-bit timer/counter with two PWM channels, Internal and External Interrupts, a 8-channel 10-bit ADC, programmable gain stage (1x, 20x) for 12 differential ADC channel pairs, a programmable Watchdog Timer with internal oscillator, internal calibrated oscillator, and four software selectable power saving modes. Idle mode stops the CPU while allowing the SRAM, Timer/Counter, ADC, Analog Comparator, and Interrupt system to continue functioning. ADC Noise Reduction mode minimizes switching noise during ADC conversions by stopping the CPU and all I/O modules except the ADC. In Power-down mode registers keep their contents and all chip functions are disabled until the next interrupt or hardware reset. In Standby mode, the crystal/resonator oscillator is running while the rest of the device is sleeping, allowing very fast start-up combined with low power consumption.

The device is manufactured using Atmel's high density non-volatile memory technology. The on-chip ISP Flash allows the Program memory to be re-programmed in-system through an SPI serial interface, by a conventional non-volatile memory programmer or by an on-chip boot code running on the AVR core.

The ATtiny24/44/84 AVR is supported with a full suite of program and system development tools including: C Compilers, Macro Assemblers, Program Debugger/Simulators and Evaluation kits.

## 3. About

### 3.1 Resources

A comprehensive set of drivers, application notes, data sheets and descriptions on development tools are available for download at <http://www.atmel.com/avr>.

### 3.2 Code Examples

This documentation contains simple code examples that briefly show how to use various parts of the device. These code examples assume that the part specific header file is included before compilation. Be aware that not all C compiler vendors include bit definitions in the header files and interrupt handling in C is compiler dependent. Please confirm with the C compiler documentation for more details.

For I/O Registers located in the extended I/O map, "IN", "OUT", "SBIS", "SBIC", "CBI", and "SBI" instructions must be replaced with instructions that allow access to extended I/O. Typically, this means "LDS" and "STS" combined with "SBRS", "SBRC", "SBR", and "CBR". Note that not all AVR devices include an extended I/O map.

### 3.3 Data Retention

Reliability Qualification results show that the projected data retention failure rate is much less than 1 PPM over 20 years at 85°C or 100 years at 25°C.

### 3.4 Disclaimer

Typical values contained in this datasheet are based on simulations and characterization of other AVR microcontrollers manufactured on the same process technology.

## 4. Register Summary

| Address     | Name     | Bit 7   | Bit 6  | Bit 5  | Bit 4  | Bit 3   | Bit 2   | Bit 1   | Bit 0   | Page                 |

- Note:
1. For compatibility with future devices, reserved bits should be written to zero if accessed. Reserved I/O memory addresses should never be written.
  2. I/O Registers within the address range 0x00 - 0x1F are directly bit-accessible using the SBI and CBI instructions. In these registers, the value of single bits can be checked by using the SBIS and SBIC instructions.
  3. Some of the Status Flags are cleared by writing a logical one to them. Note that, unlike most other AVR's, the CBI and SBI instructions will only operation the specified bit, and can therefore be used on registers containing such Status Flags. The CBI and SBI instructions work with registers 0x00 to 0x1F only.

## 5. Instruction Set Summary

| Mnemonics                                | Operands | Description                            | Operation  | Flags      | #Clocks |
|--|----------|--|--|------------|---------|
| <b>ARITHMETIC AND LOGIC INSTRUCTIONS</b> |          |  |  |            |         |
| ADD                                      | Rd, Rr   | Add two Registers                      | $Rd \leftarrow Rd + Rr$  | Z,C,N,V,H  | 1       |
| ADC                                      | Rd, Rr   | Add with Carry two Registers           | $Rd \leftarrow Rd + Rr + C$  | Z,C,N,V,H  | 1       |
| ADIW                                     | RdI,K    | Add Immediate to Word                  | $Rdh:Rdl \leftarrow Rdh:Rdl + K$                                   | Z,C,N,V,S  | 2       |
| SUB                                      | Rd, Rr   | Subtract two Registers                 | $Rd \leftarrow Rd - Rr$  | Z,C,N,V,H  | 1       |
| SUBI                                     | Rd, K    | Subtract Constant from Register        | $Rd \leftarrow Rd - K$   | Z,C,N,V,H  | 1       |
| SBC                                      | Rd, Rr   | Subtract with Carry two Registers      | $Rd \leftarrow Rd - Rr - C$  | Z,C,N,V,H  | 1       |
| SBCI                                     | Rd, K    | Subtract with Carry Constant from Reg. | $Rd \leftarrow Rd - K - C$   | Z,C,N,V,H  | 1       |
| SBIW                                     | RdI,K    | Subtract Immediate from Word           | $Rdh:Rdl \leftarrow Rdh:Rdl - K$                                   | Z,C,N,V,S  | 2       |
| AND                                      | Rd, Rr   | Logical AND Registers                  | $Rd \leftarrow Rd \bullet Rr$                                      | Z,N,V      | 1       |
| ANDI                                     | Rd, K    | Logical AND Register and Constant      | $Rd \leftarrow Rd \bullet K$                                       | Z,N,V      | 1       |
| OR                                       | Rd, Rr   | Logical OR Registers                   | $Rd \leftarrow Rd \vee Rr$   | Z,N,V      | 1       |
| ORI                                      | Rd, K    | Logical OR Register and Constant       | $Rd \leftarrow Rd \vee K$  | Z,N,V      | 1       |
| EOR                                      | Rd, Rr   | Exclusive OR Registers                 | $Rd \leftarrow Rd \oplus Rr$                                       | Z,N,V      | 1       |

Notes: 1. Code indicators:

- U: matte tin
- R: tape & reel

2. All packages are Pb-free, halide-free and fully green and they comply with the European directive for Restriction of Hazardous Substances (RoHS).
3. These devices can also be supplied in wafer form. Please contact your local Atmel sales office for detailed ordering information and minimum quantities.

| Package Type |   |
|--------------|---|
| <b>14S1</b>  | 14-lead, 0.150" Wide Body, Plastic Gull Wing Small Outline Package (SOIC)         |
| <b>14P3</b>  | 14-lead, 0.300" Wide, Plastic Dual Inline Package (PDIP)                          |
| <b>20M1</b>  | 20-pad, 4 x 4 x 0.8 mm Body, Quad Flat No-Lead/Micro Lead Frame Package (QFN/MLF) |

- Notes:
1. This drawing is for general information only; refer to JEDEC Drawing MS-012, Variation AB for additional information.
  2. Dimension D does not include mold Flash, protrusions or gate burrs. Mold Flash, protrusion and gate burrs shall not exceed 0.15 mm (0.006") per side.
  3. Dimension E does not include inter-lead Flash or protrusion. Inter-lead flash and protrusions shall not exceed 0.25 mm (0.010") per side.
  4. L is the length of the terminal for soldering to a substrate.
  5. The lead width B, as measured 0.36 mm (0.014") or greater above the seating plane, shall not exceed a maximum value of 0.61 mm (0.024") per side.

## 8. Errata

The revision letters in this section refer to the revision of the corresponding ATtiny24/44/84 device.

### 8.1 ATtiny24

#### 8.1.1 Rev. D – E

No known errata.

#### 8.1.2 Rev. C

- **Reading EEPROM when system clock frequency is below 900 kHz may not work**

##### 1. **Reading EEPROM when system clock frequency is below 900 kHz may not work**

Reading data from the EEPROM at system clock frequency below 900 kHz may result in wrong data read.

##### **Problem Fix/Work around**

Avoid using the EEPROM at clock frequency below 900 kHz.

#### 8.1.3 Rev. B

- **EEPROM read from application code does not work in Lock Bit Mode 3**
- **Reading EEPROM when system clock frequency is below 900 kHz may not work**

##### 1. **EEPROM read from application code does not work in Lock Bit Mode 3**

When the Memory Lock Bits LB2 and LB1 are programmed to mode 3, EEPROM read does not work from the application code.

##### **Problem Fix/Work around**

Do not set Lock Bit Protection Mode 3 when the application code needs to read from EEPROM.

##### 2. **Reading EEPROM when system clock frequency is below 900 kHz may not work**

Reading data from the EEPROM at system clock frequency below 900 kHz may result in wrong data read.

##### **Problem Fix/Work around**

Avoid using the EEPROM at clock frequency below 900 kHz.

#### 8.1.4 Rev. A

Not sampled.

## 8.2 ATtiny44

### 8.2.1 Rev. B – D

No known errata.

### 8.2.2 Rev. A

- **Reading EEPROM when system clock frequency is below 900 kHz may not work**

#### 1. **Reading EEPROM when system clock frequency is below 900 kHz may not work**

Reading data from the EEPROM at system clock frequency below 900 kHz may result in wrong data read.

#### **Problem Fix/Work around**

Avoid using the EEPROM at clock frequency below 900 kHz.

### **8.3 ATtiny84**

#### **8.3.1 Rev. A – B**

No known errata.

## 9. Datasheet Revision History

Please note that the referring page numbers refer to the complete document.

### 9.1 Rev K. - 10/10

1. Added note for Internal 1.1V Reference in [Table 16-4 on page 146](#).
2. Added tape & reel in [Section 24. "Ordering Information" on page 217](#).
3. Updated last page.

### 9.2 Rev J. - 08/10

1. Updated [Section 6.4 "Clock Output Buffer" on page 30](#), changed CLK0 to CKOUT.
2. Removed text "Not recommended for new design" from cover page.

### 9.3 Rev I. - 06/10

1. Removed "Preliminary" from cover page.
2. Updated notes in [Table 19-16, "High-voltage Serial Programming Instruction Set for ATtiny24/44/84," on page 171](#).
3. Added clarification before [Table 6-8, "Capacitance for the Low-Frequency Crystal Oscillator," on page 28](#).
4. Updated some table notes in [Section 20. "Electrical Characteristics" on page 174](#).

### 9.4 Rev H. 10/09

1. Updated document template. Re-arranged some sections.
2. Updated ["Low-Frequency Crystal Oscillator"](#) with the [Table 6-8 on page 28](#)
3. Updated Tables:
  - ["Active Clock Domains and Wake-up Sources in Different Sleep Modes" on page 33](#)
  - ["DC Characteristics" on page 174](#)
  - ["Register Summary" on page 213](#)
4. Updated Register Description:
  - ["ADMUX – ADC Multiplexer Selection Register" on page 145](#)
5. Signature Imprint Reading Instructions updated in ["Reading Device Signature Imprint Table from Firmware" on page 156](#).
6. Updated Section:
  - [Step 1. on page 164](#)
7. Added Table:
  - ["Analog Comparator Characteristics" on page 179](#)
8. Updated Figure:
  - ["Active Supply Current vs. frequency \(1 - 20 MHz\)" on page 187](#)
9. Updated [Figure 21-30 on page 201](#) and [Figure 21-33 on page 202](#) under "Pin Threshold and Hysteresis".
10. Changed ATtiny24/44 device status to "Not Recommended for New Designs. Use: ATtiny24A/44A".

- “SPMCSR – Store Program Memory Control and Status Register” on page 157
  - “Register Summary” on page 213
3. Updated Figures:
- “Reset Logic” on page 39
  - “Watchdog Reset During Operation” on page 42
  - “Compare Match Output Unit, Schematic (non-PWM Mode)” on page 95
  - “Analog to Digital Converter Block Schematic” on page 133
  - “ADC Timing Diagram, Free Running Conversion” on page 137
  - “Analog Input Circuitry” on page 140
  - “High-voltage Serial Programming” on page 167
  - “Serial Programming Timing” on page 183
  - “High-voltage Serial Programming Timing” on page 184
  - “Active Supply Current vs. Low Frequency (0.1 - 1.0 MHz)” on page 186
  - “Active Supply Current vs. frequency (1 - 20 MHz)” on page 187
  - “Active Supply Current vs.  $V_{CC}$  (Internal RC Oscillator, 8 MHz)” on page 187
  - “Active Supply Current vs.  $V_{CC}$  (Internal RC Oscillator, 1 MHz)” on page 188
  - “Active Supply Current vs.  $V_{CC}$  (Internal RC Oscillator, 128 kHz)” on page 188
  - “Idle Supply Current vs. Low Frequency (0.1 - 1.0 MHz)” on page 189
  - “Idle Supply Current vs. Frequency (1 - 20 MHz)” on page 189
  - “Idle Supply Current vs.  $V_{CC}$  (Internal RC Oscillator, 8 MHz)” on page 190
  - “Idle Supply Current vs.  $V_{CC}$  (Internal RC Oscillator, 1 MHz)” on page 190
  - “Idle Supply Current vs.  $V_{CC}$  (Internal RC Oscillator, 128 kHz)” on page 191
  - “Power-down Supply Current vs.  $V_{CC}$  (Watchdog Timer Disabled)” on page 191
  - “Power-down Supply Current vs.  $V_{CC}$  (Watchdog Timer Enabled)” on page 192
  - “Reset Pin Input Hysteresis vs.  $V_{CC}$ ” on page 202
  - “Reset Pin Input Hysteresis vs.  $V_{CC}$  (Reset Pin Used as I/O)” on page 203
  - “Watchdog Oscillator Frequency vs.  $V_{CC}$ ” on page 205
  - “Watchdog Oscillator Frequency vs. Temperature” on page 205
  - “Calibrated 8 MHz RC Oscillator Frequency vs.  $V_{CC}$ ” on page 206
  - “Calibrated 8 MHz RC oscillator Frequency vs. Temperature” on page 206
  - “ADC Current vs.  $V_{CC}$ ” on page 207
  - “Programming Current vs.  $V_{CC}$  (ATtiny24)” on page 209
  - “Programming Current vs.  $V_{CC}$  (ATtiny44)” on page 209
  - “Programming Current vs.  $V_{CC}$  (ATtiny84)” on page 210
4. Added Figures:
- “Reset Pin Output Voltage vs. Sink Current ( $V_{CC} = 3V$ )” on page 198
  - “Reset Pin Output Voltage vs. Sink Current ( $V_{CC} = 5V$ )” on page 198
  - “Reset Pin Output Voltage vs. Source Current ( $V_{CC} = 3V$ )” on page 199
  - “Reset Pin Output Voltage vs. Source Current ( $V_{CC} = 5V$ )” on page 199
5. Updated Tables:
- “Device Clocking Options Select” on page 25

7. Updated DC Characteristics in [“Electrical Characteristics” on page 174.](#)
8. Updated [“Typical Characteristics” on page 185.](#)
9. Updated [“Errata” on page 223.](#)

#### **9.11 Rev A. 12/05**

Initial revision.
