Understanding Embedded - CPLDs (Complex Programmable Logic Devices)

Embedded - CPLDs, or Complex Programmable Logic Devices, are highly versatile digital logic devices used in electronic systems. These programmable components are designed to perform complex logical operations and can be customized for specific applications. Unlike fixed-function ICs, CPLDs offer the flexibility to reprogram their configuration, making them an ideal choice for various embedded systems. They consist of a set of logic gates and programmable interconnects, allowing designers to implement complex logic circuits without needing custom hardware.

Applications of Embedded - CPLDs

Details	
Product Status	Not For New Designs
Programmable Type	In System Programmable
Delay Time tpd(1) Max	7.5 ns
Voltage Supply - Internal	4.75V ~ 5.25V
Number of Logic Elements/Blocks	-
Number of Macrocells	256
Number of Gates	-
Number of I/O	128
Operating Temperature	0°C ~ 70°C (TA)
Mounting Type	Surface Mount
Package / Case	208-BFQFP
Supplier Device Package	208-PQFP (28x28)
Purchase URL	https://www.e-xfl.com/product-detail/lattice-semiconductor/m4a5-256-128-7ync

Product-Term Array

The product-term array consists of a number of product terms that form the basis of the logic being implemented. The inputs to the AND gates come from the central switch matrix (Table 5), and are provided in both true and complement forms for efficient logic implementation.

Table 5. PAL Block Inputs

Device	Number of Inputs to PAL Block
M4A3-32/32 and M4A5-32/32	33
M4A3-64/32 and M4A5-64/32	33
M4A3-64/64	33
M4A3-96/48 and M4A5-96/48	33
M4A3-128/64 and M4A5-128/64	33
M4A3-192/96 and M4A5-192/96	34
M4A3-256/128 and M4A5-256/128	34
M4A3-256/160 and M4A3-256/192	36
M4A3-384	36
M4A3-512	36

Logic Allocator

Within the logic allocator, product terms are allocated to macrocells in “product term clusters.” The availability and distribution of product term clusters are automatically considered by the software as it fits functions within a PAL block. The size of a product term cluster has been optimized to provide high utilization of product terms, making complex functions using many product terms possible. Yet when few product terms are used, there will be a minimal number of unused—or wasted—product terms left over. The product term clusters available to each macrocell within a PAL block are shown in Tables 6 and 7.

Each product term cluster is associated with a macrocell. The size of a cluster depends on the configuration of the associated macrocell. When the macrocell is used in synchronous mode (Figure 2a), the basic cluster has 4 product terms. When the associated macrocell is used in asynchronous mode (Figure 2b), the cluster has 2 product terms. Note that if the product term cluster is routed to a different macrocell, the allocator configuration is not determined by the mode of the macrocell actually being driven. The configuration is always set by the mode of the macrocell that the cluster will drive if not routed away, regardless of the actual routing.

In addition, there is an extra product term that can either join the basic cluster to give an extended cluster, or drive the second input of an exclusive-OR gate in the signal path. If included with the basic cluster, this provides for up to 20 product terms on a synchronous function that uses four extended 5-product-term clusters. A similar asynchronous function can have up to 18 product terms.

When the extra product term is used to extend the cluster, the value of the second XOR input can be programmed as a 0 or a 1, giving polarity control. The possible configurations of the logic allocator are shown in Figures 3 and 4.

Table 6. Logic Allocator for All ispMACH 4A Devices (except M4A(3,5)-32/32)

Output Macrocell	Available Clusters	Output Macrocell	Available Clusters
M_0	C_0, C_1, C_2	M_8	C_7, C_8, C_9, C_{10}
M_1	C_0, C_1, C_2, C_3	M_9	C_8, C_9, C_{10}, C_{11}
M_2	C_1, C_2, C_3, C_4	M_{10}	$C_9, C_{10}, C_{11}, C_{12}$

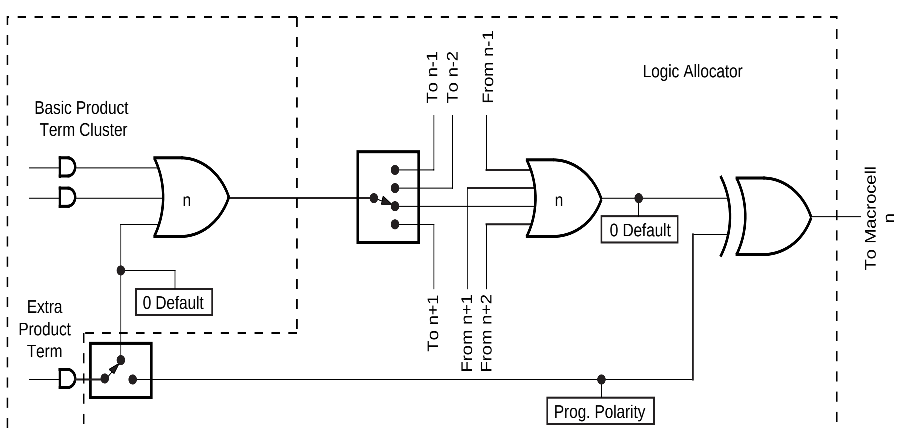
a. Synchronous Mode



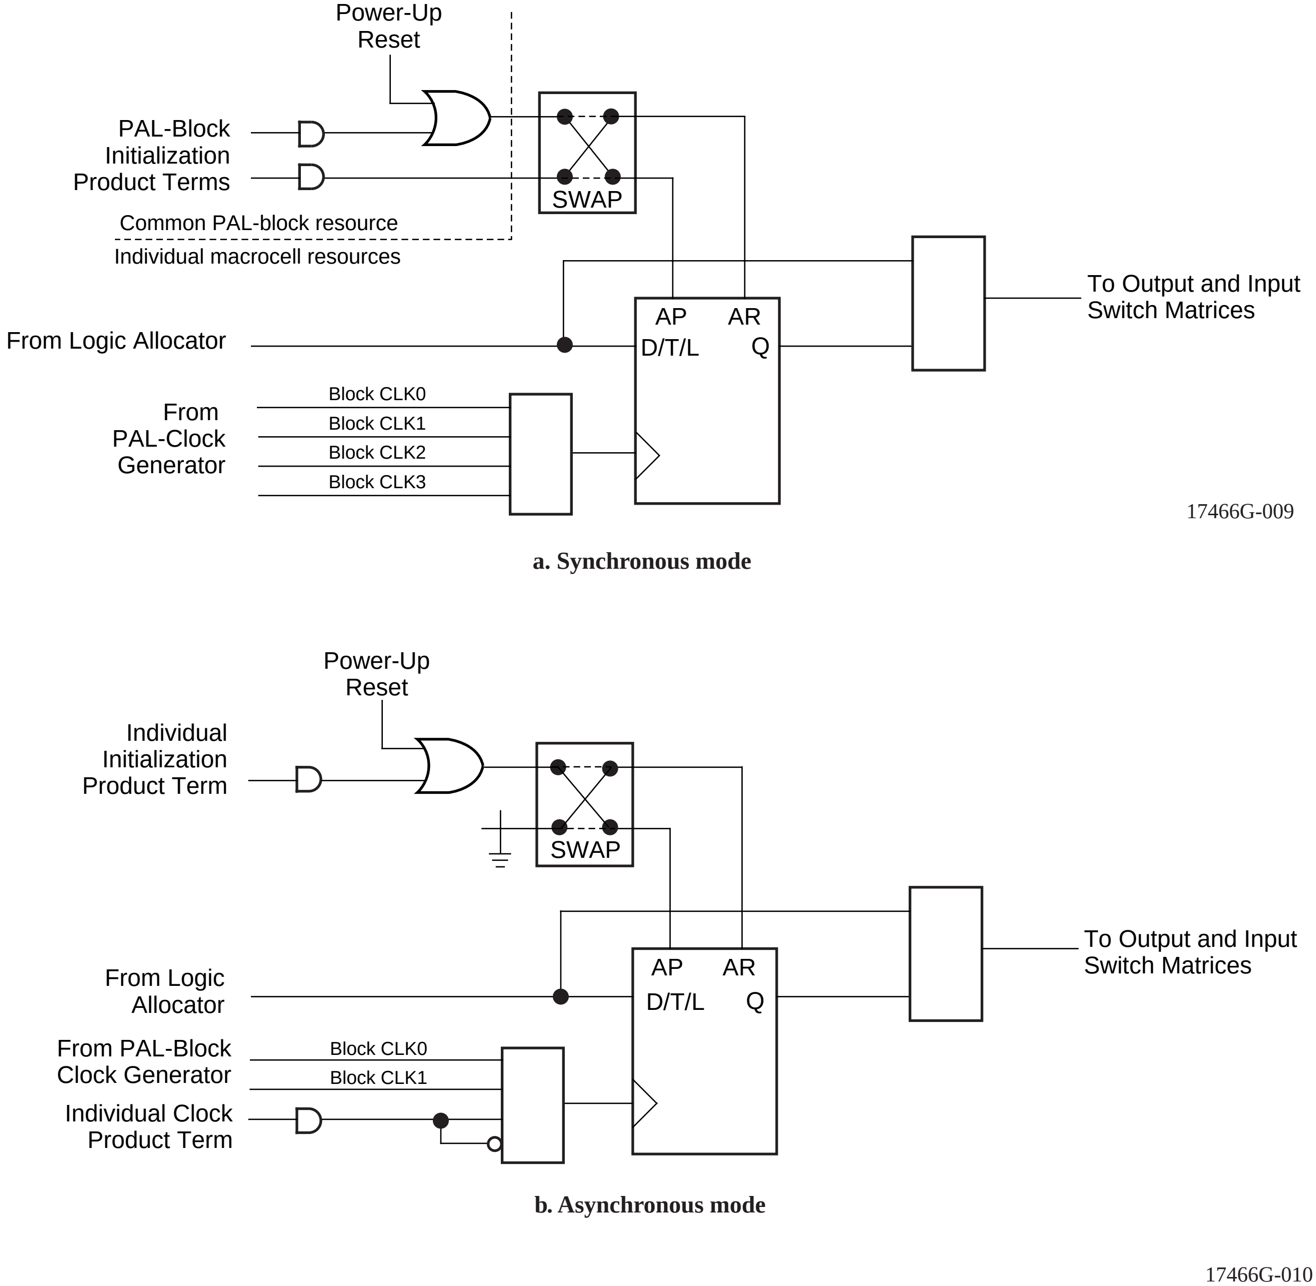
b. Asynchronous Mode

17466G-006

Figure 2. Logic Allocator: Configuration of Cluster "n" Set by Mode of Macrocell "n"

Macrocell

The macrocell consists of a storage element, routing resources, a clock multiplexer, and initialization control. The macrocell has two fundamental modes: synchronous and asynchronous (Figure 5). The mode chosen only affects clocking and initialization in the macrocell.



a. Synchronous mode

b. Asynchronous mode

17466G-010

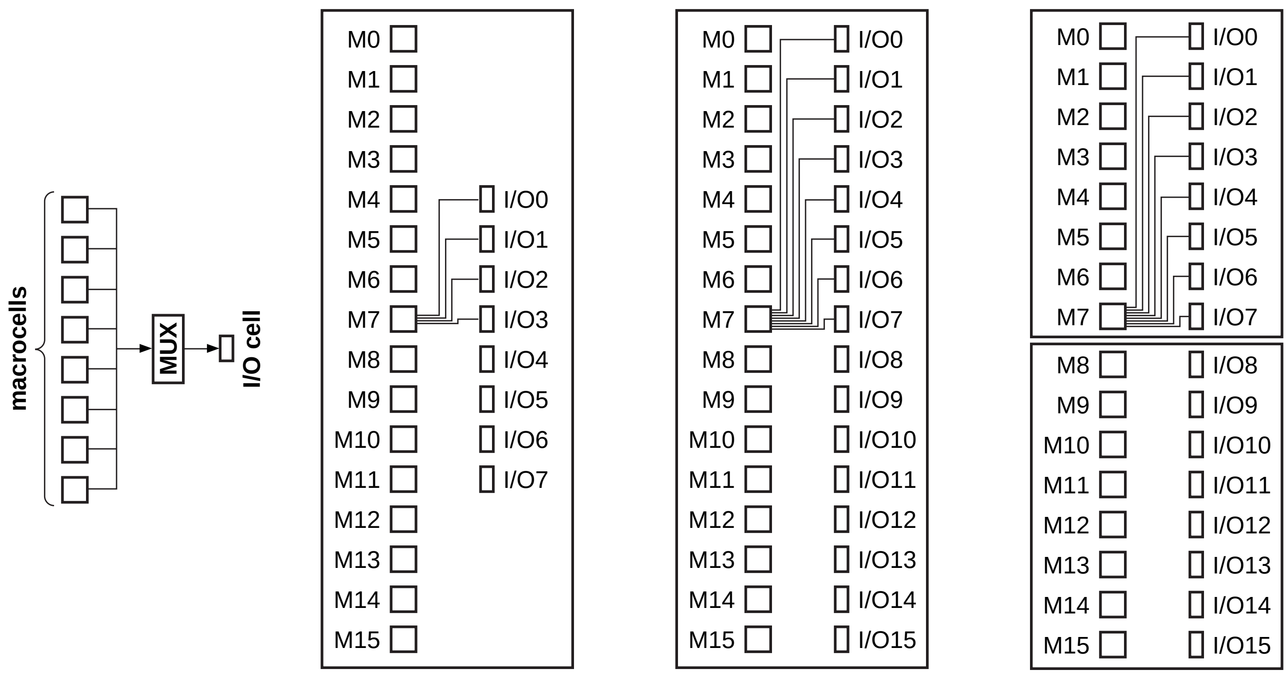
Figure 5. Macrocell

In either mode, a combinatorial path can be used. For combinatorial logic, the synchronous mode will generally be used, since it provides more product terms in the allocator.

Output Switch Matrix

The output switch matrix allows macrocells to be connected to any of several I/O cells within a PAL block. This provides high flexibility in determining pinout and allows design changes to occur without effecting pinout.

In ispMACH 4A devices with 2:1 Macrocell-I/O cell ratio, each PAL block has twice as many macrocells as I/O cells. The ispMACH 4A output switch matrix allows for half of the macrocells to drive I/O cells within a PAL block, in combinations according to Figure 9. Each I/O cell can choose from eight macrocells; each macrocell has a choice of four I/O cells. The ispMACH 4A devices with 1:1 Macrocell-I/O cell ratio allow each macrocell to drive one of eight I/O cells (Figure 9).



Each I/O cell can choose one of 8 macrocells in all ispMACH 4A devices.

Each macrocell can drive one of 4 I/O cells in ispMACH 4A devices with 2:1 macrocell-I/O cell ratio.

Each macrocell can drive one of 8 I/O cells in ispMACH 4A devices with 1:1 macrocell-I/O cell ratio except M4A(3, 5)-32/32 devices.

Each macrocell can drive one of 8 I/O cells in M4A(3, 5)-32/32 devices.

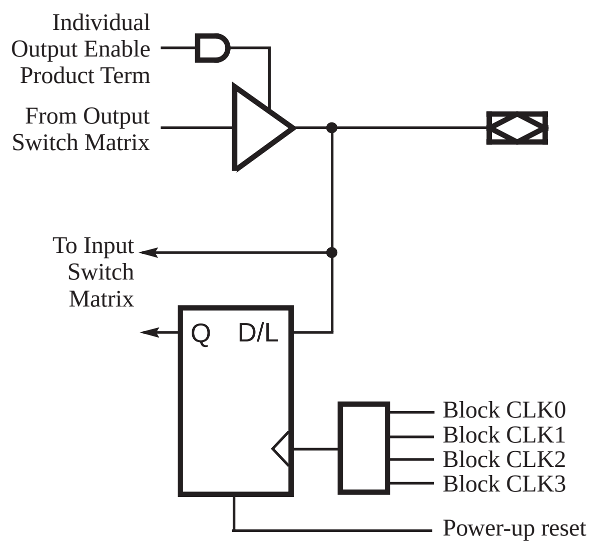
Figure 9. ispMACH 4A Output Switch Matrix

Table 10. Output Switch Matrix Combinations for ispMACH 4A Devices with 2:1 Macrocell-I/O Cell Ratio

Macrocell	Routable to I/O Cells
M0, M1	I/O0, I/O5, I/O6, I/O7
M2, M3	I/O0, I/O1, I/O6, I/O7
M4, M5	I/O0, I/O1, I/O2, I/O7
M6, M7	I/O0, I/O1, I/O2, I/O3
M8, M9	I/O1, I/O2, I/O3, I/O4
M10, M11	I/O2, I/O3, I/O4, I/O5

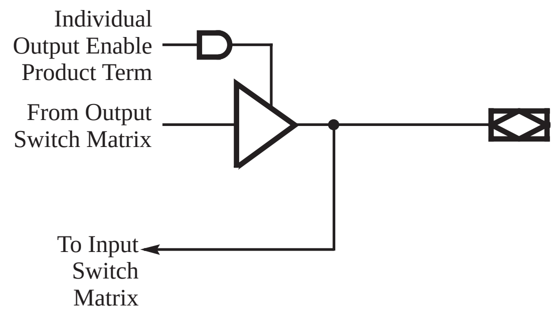
I/O Cell

The I/O cell (Figures 10 and 11) simply consists of a programmable output enable, a feedback path, and flip-flop (except ispMACH 4A devices with 1:1 macrocell-I/O cell ratio). An individual output enable product term is provided for each I/O cell. The feedback signal drives the input switch matrix.



17466G-017

Figure 10. I/O Cell for ispMACH 4A Devices with 2:1 Macrocell-I/O Cell Ratio



17466G-018

Figure 11. I/O Cell for ispMACH 4A Devices with 1:1 Macrocell-I/O Cell Ratio

The I/O cell (Figure 10) contains a flip-flop, which provides the capability for storing the input in a D-type register or latch. The clock can be any of the PAL block clocks. Both the direct and registered versions of the input are sent to the input switch matrix. This allows for such functions as "time-domain-multiplexed" data comparison, where the first data value is stored, and then the second data value is put on the I/O pin and compared with the previous stored value.

Note that the flip-flop used in the ispMACH 4A I/O cell is independent of the flip-flops in the macrocells. It powers up to a logic low.

Zero-Hold-Time Input Register

The ispMACH 4A devices have a zero-hold-time (ZHT) fuse which controls the time delay associated with loading data into all I/O cell registers and latches. When programmed, the ZHT fuse increases the data path setup delays to input storage elements, matching equivalent delays in the clock path. When the fuse is erased, the setup time to the input storage element is minimized. This feature facilitates doing worst-case designs for which data is loaded from sources which have low (or zero) minimum output propagation delays from clock edges.

Input Switch Matrix

The input switch matrix (Figures 12 and 13) optimizes routing of inputs to the central switch matrix. Without the input switch matrix, each input and feedback signal has only one way to enter the central switch matrix. The input switch matrix provides additional ways for these signals to enter the central switch matrix.

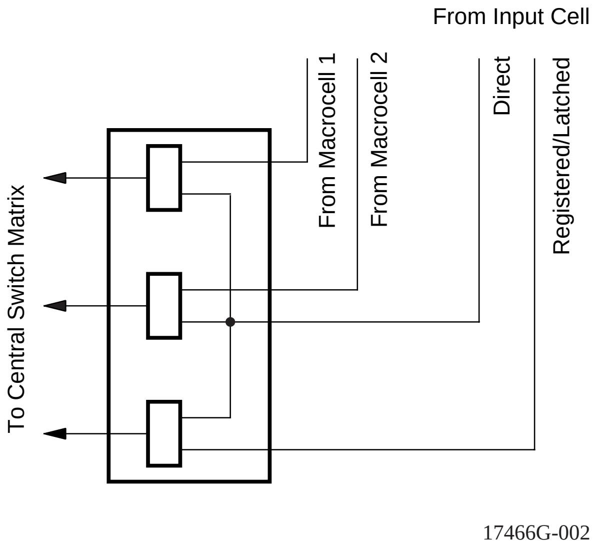


Figure 12. ispMACH 4A with 2:1 Macrocell-I/O Cell Ratio - Input Switch Matrix

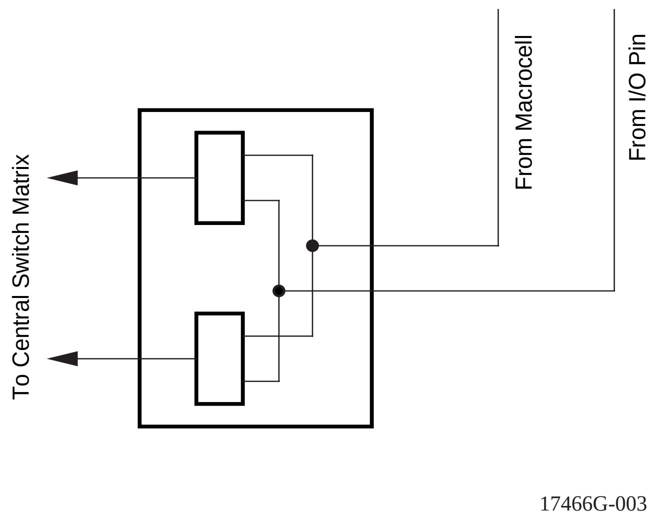

Figure 13. ispMACH 4A with 1:1 Macrocell-I/O Cell Ratio - Input Switch Matrix

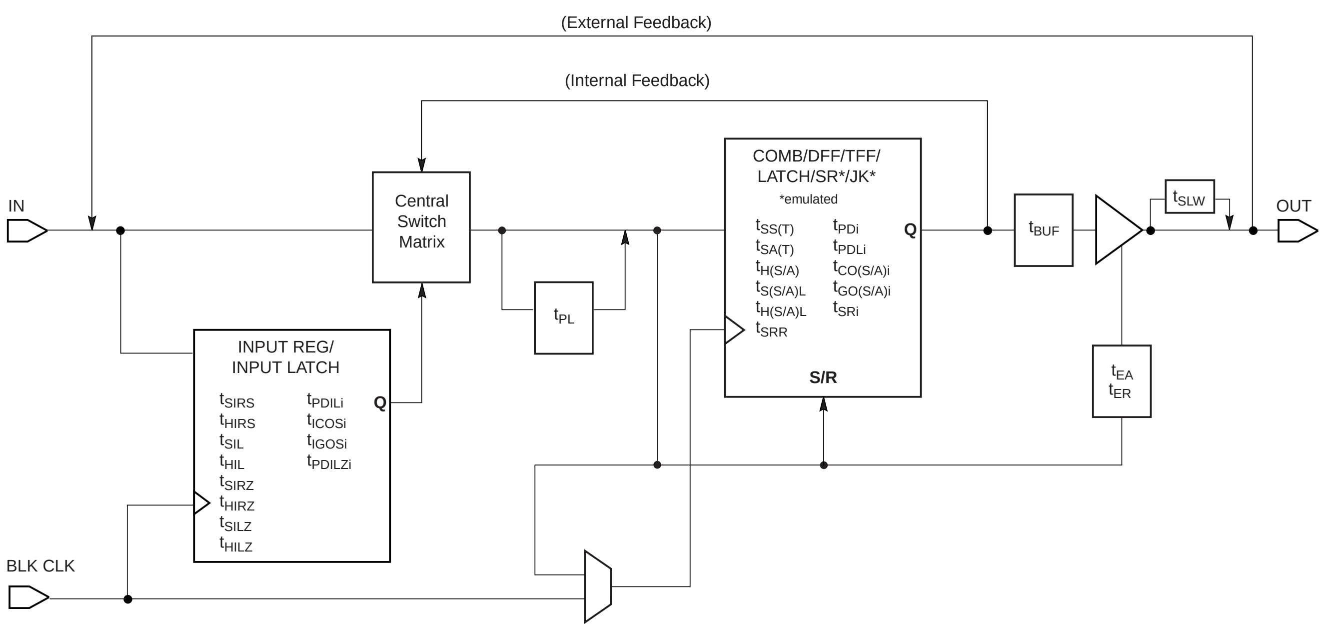
ispMACH 4A TIMING MODEL

The primary focus of the ispMACH 4A timing model is to accurately represent the timing in a ispMACH 4A device, and at the same time, be easy to understand. This model accurately describes all combinatorial and registered paths through the device, making a distinction between internal feedback and external feedback. A signal uses internal feedback when it is fed back into the switch matrix or block without having to go through the output buffer. The input register specifications are also reported as internal feedback. When a signal is fed back into the switch matrix after having gone through the output buffer, it is using external feedback.

The parameter, t_{BUF}, is defined as the time it takes to go from feedback through the output buffer to the I/O pad. If a signal goes to the internal feedback rather than to the I/O pad, the parameter designator is followed by an “i”. By adding t_{BUF} to this internal parameter, the external parameter is derived. For example, $t_{PD} = t_{PDi} + t_{BUF}$. A diagram representing the modularized ispMACH 4A timing model is shown in Figure 15. Refer to the application note entitled *MACH 4 Timing and High Speed Design* for a more detailed discussion about the timing parameters.



17466G-025

Figure 15. ispMACH 4A Timing Model

SPEEDLOCKING FOR GUARANTEED FIXED TIMING

The ispMACH 4A architecture allows allocation of up to 20 product terms to an individual macrocell with the assistance of an XOR gate without incurring additional timing delays.

The design of the switch matrix and PAL blocks guarantee a fixed pin-to-pin delay that is independent of the logic required by the design. Other competitive CPLDs incur serious timing delays as product terms expand beyond their typical 4 or 5 product term limits. Speed *and* SpeedLocking combine to give designs easy access to the performance required in today’s designs.

PIN DESIGNATIONS

CLK	=	Clock
GND	=	Ground
I	=	Input
I/O	=	Input/Output
N/C	=	No Connect
VCC	=	Supply Voltage
TDI	=	Test Data In
TCK	=	Test Clock
TMS	=	Test Mode Select
TDO	=	Test Data Out

m4a3.512.256_388bga

5V Commercial Combinations		
M4A5-32/32	-5, -7, -10,	JC, VC, VC48
M4A5-64/32	-55, -7, -10	JC, VC, VC48
M4A5-96/48		VC
M4A5-128/64		YC, VC
M4A5-192/96	-6, -7, -10	VC
M4A5-256/128	-65, -7, -10	YC

5V Industrial Combinations		
M4A5-32/32	-7, -10, -12	JI, VI, VI48
M4A5-64/32	-7, -10, -12	JI, VI, VI48
M4A5-96/48		VI
M4A5-128/64		YI, VI
M4A5-192/96	-7, -10, -12	VI
M4A5-256/128	-10, -12	YI

Lead-free Packaging

3.3V Commercial Combinations		
M4A3-32/32	-5, -7, -10	VNC, VNC48, JNC
M4A3-64/32	-55, -7, -10	VNC, VNC48, JNC
M4A3-64/64		VNC
M4A3-128/64		VNC
M4A3-192/96	-6, -7, -10	VNC
M4A3-256/128	-55, -7, -10	FANC, YNC
M4A3-256/160	-7, -10	YNC
M4A3-256/192		FANC
M4A3-384/192	-65, -10, -12	FANC
M4A3-512/192	-7, -10, -12	FANC

3.3V Industrial Combinations		
M4A3-32/32	-7, -10, -12	VNI, VNI48, JNI
M4A3-64/32		VNI, VNI48, JNI
M4A3-64/64		VNI
M4A3-128/64		VNI
M4A3-192/96	-10, -12	VNI
M4A3-256/128		FANI, YNI
M4A3-256/160		YNI
M4A3-256/192	-10, -12, -14	FANI
M4A3-384/192		FANI
M4A3-512/192		FANI

5V Commercial Combinations		
M4A5-32/32	-5, -7, -10	VNC, VNC48, JNC
M4A5-64/32	-55, -7, -10	VNC, VNC48, JNC
M4A5-96/48		VNC
M4A5-128/64		VNC, YNC
M4A5-192/96	-6, -7, -10	VNC
M4A5-256/128	-65, -7, -10	YNC

5V Industrial Combinations		
M4A5-32/32	-7, -10, -12	VNI, VNI48, JNI
M4A5-64/32		VNI, VNI48, JNI
M4A5-96/48		VNI
M4A5-128/64		VNI, YNI
M4A5-192/96		VNI
M4A5-256/128		YNI

Most ispMACH devices are dual-marked with both Commercial and Industrial grades. The Industrial speed grade is slower, i.e., M4A3-256/128-7YC-10YI

Valid Combinations

Valid Combinations list configurations planned to be supported in volume for this device. Consult the local Lattice sales office to confirm availability of specific valid combinations and to check on newly released combinations.

Revision History

Date	Version	Change Summary
-	K	Previous Lattice release.
August 2006	L	Updated for lead-free package options.
September 2006	M	Revised M4A3-256/160 208-pin PQFP connection diagram.
