[Understanding Embedded - CPLDs \(Complex Programmable Logic Devices\)](#)

Embedded - CPLDs, or Complex Programmable Logic Devices, are highly versatile digital logic devices used in electronic systems. These programmable components are designed to perform complex logical operations and can be customized for specific applications. Unlike fixed-function ICs, CPLDs offer the flexibility to reprogram their configuration, making them an ideal choice for various embedded systems. They consist of a set of logic gates and programmable interconnects, allowing designers to implement complex logic circuits without needing custom hardware.

Applications of Embedded - CPLDs

Details

Product Status	Obsolete
Programmable Type	In System Programmable
Delay Time tpd(1) Max	5 ns
Voltage Supply - Internal	4.75V ~ 5.25V
Number of Logic Elements/Blocks	-
Number of Macrocells	32
Number of Gates	-
Number of I/O	32
Operating Temperature	0°C ~ 70°C (TA)
Mounting Type	Surface Mount
Package / Case	44-LCC (J-Lead)
Supplier Device Package	44-PLCC (16.59x16.59)
Purchase URL	https://www.e-xfl.com/product-detail/lattice-semiconductor/m4a5-32-32-5jnc

Table 4. Architectural Summary of ispMACH 4A devices

ispMACH 4A Devices		
	M4A3-64/32, M4A5-64/32 M4A3-96/48, M4A5-96/48 M4A3-128/64, M4A5-128/64 M4A3-192/96, M4A5-192/96 M4A3-256/128, M4A5-256/128 M4A3-384 M4A3-512	M4A3-32/32 M4A5-32/32 M4A3-64/64 M4A3-256/160 M4A3-256/192
Macrocell-I/O Cell Ratio	2:1	1:1
Input Switch Matrix	Yes	Yes ¹
Input Registers	Yes	No
Central Switch Matrix	Yes	Yes
Output Switch Matrix	Yes	Yes

The Macrocell-I/O cell ratio is defined as the number of macrocells versus the number of I/O cells internally in a PAL block (Table 4).

The central switch matrix takes all dedicated inputs and signals from the input switch matrices and routes them as needed to the PAL blocks. Feedback signals that return to the same PAL block still must go through the central switch matrix. This mechanism ensures that PAL blocks in ispMACH 4A devices communicate with each other with consistent, predictable delays.

The central switch matrix makes a ispMACH 4A device more advanced than simply several PAL devices on a single chip. It allows the designer to think of the device not as a collection of blocks, but as a single programmable device; the software partitions the design into PAL blocks through the central switch matrix so that the designer does not have to be concerned with the internal architecture of the device.

Each PAL block consists of:

- ◆ Product-term array
- ◆ Logic allocator
- ◆ Macrocells
- ◆ Output switch matrix
- ◆ I/O cells
- ◆ Input switch matrix
- ◆ Clock generator

Notes:

1. M4A3-64/64 internal switch matrix functionality embedded in central switch matrix.

Product-Term Array

The product-term array consists of a number of product terms that form the basis of the logic being implemented. The inputs to the AND gates come from the central switch matrix (Table 5), and are provided in both true and complement forms for efficient logic implementation.

Table 5. PAL Block Inputs

Device	Number of Inputs to PAL Block
M4A3-32/32 and M4A5-32/32	33
M4A3-64/32 and M4A5-64/32	33
M4A3-64/64	33

M4A3-384	36
M4A3-512	36

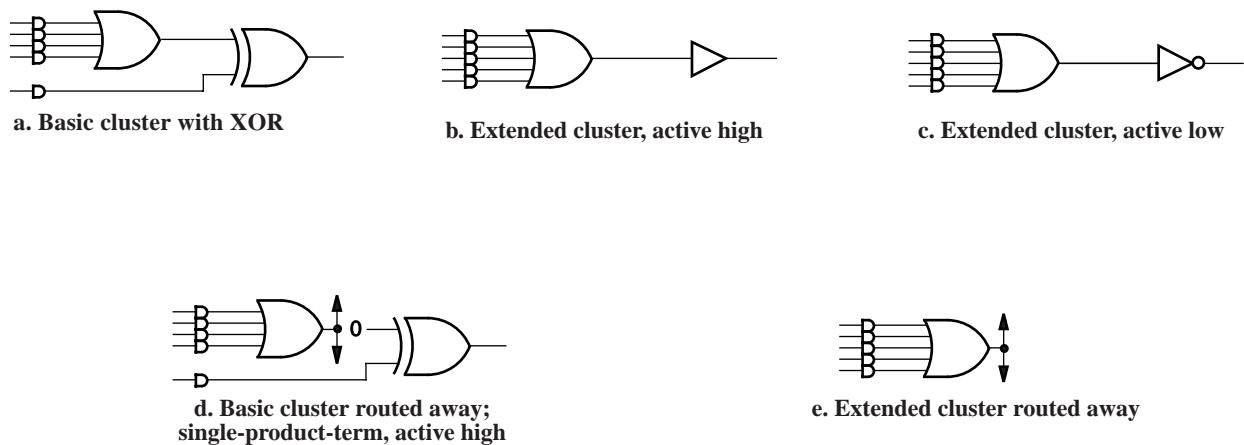

Logic Allocator

Within the logic allocator, product terms are allocated to macrocells in “product term clusters.” The availability and distribution of product term clusters are automatically considered by the software as it fits functions within a PAL block. The size of a product term cluster has been optimized to provide high utilization of product terms, making complex functions using many product terms possible. Yet when few product terms are used, there will be a minimal number of unused—or wasted—product terms left over. The product term clusters available to each macrocell within a PAL block are shown in Tables 6 and 7.

Each product term cluster is associated with a macrocell. The size of a cluster depends on the configuration of the associated macrocell. When the macrocell is used in synchronous mode (Figure 2a), the basic cluster has 4 product terms. When the associated macrocell is used in asynchronous mode (Figure 2b), the cluster has 2 product terms. Note that if the product term cluster is routed to a different macrocell, the allocator configuration is not determined by the mode of the macrocell actually being driven. The configuration is always set by the mode of the macrocell that the cluster will drive if not routed away, regardless of the actual routing.

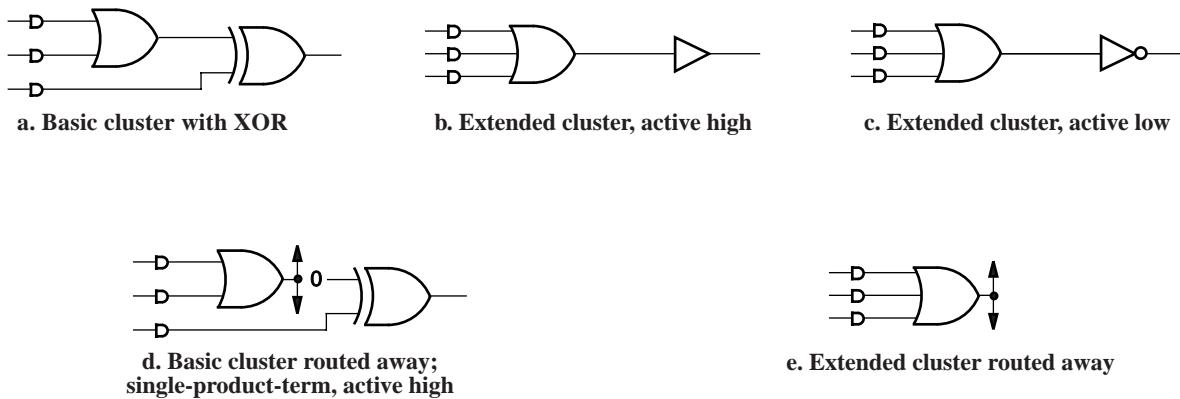

In addition, there is an extra product term that can either join the basic cluster to give an extended cluster, or drive the second input of an exclusive-OR gate in the signal path. If included with the basic cluster, this provides for up to 20 product terms on a synchronous function that uses four extended 5-product-term clusters. A similar asynchronous function can have up to 18 product terms.

When the extra product term is used to extend the cluster, the value of the second XOR input can be programmed as a 0 or a 1, giving polarity control. The possible configurations of the logic allocator are shown in Figures 3 and 4.

17466G-007

Figure 3. Logic Allocator Configurations: Synchronous Mode

17466G-008

Figure 4. Logic Allocator Configurations: Asynchronous Mode

Note that the configuration of the logic allocator has absolutely no impact on the speed of the signal. All configurations have the same delay. This means that designers do not have to decide between optimizing resources or speed; both can be optimized.

If not used in the cluster, the extra product term can act in conjunction with the basic cluster to provide XOR logic for such functions as data comparison, or it can work with the D-, T-type flip-flop to provide for J-K, and S-R register operation. In addition, if the basic cluster is routed to another macrocell, the extra product term is still available for logic. In this case, the first XOR input will be a logic 0. This circuit has the flexibility to route product terms elsewhere without giving up the use of the macrocell.

Product term clusters do not “wrap” around a PAL block. This means that the macrocells at the ends of the block have fewer product terms available.

Macrocell

The macrocell consists of a storage element, routing resources, a clock multiplexer, and initialization control. The macrocell has two fundamental modes: synchronous and asynchronous (Figure 5). The mode chosen only affects clocking and initialization in the macrocell.

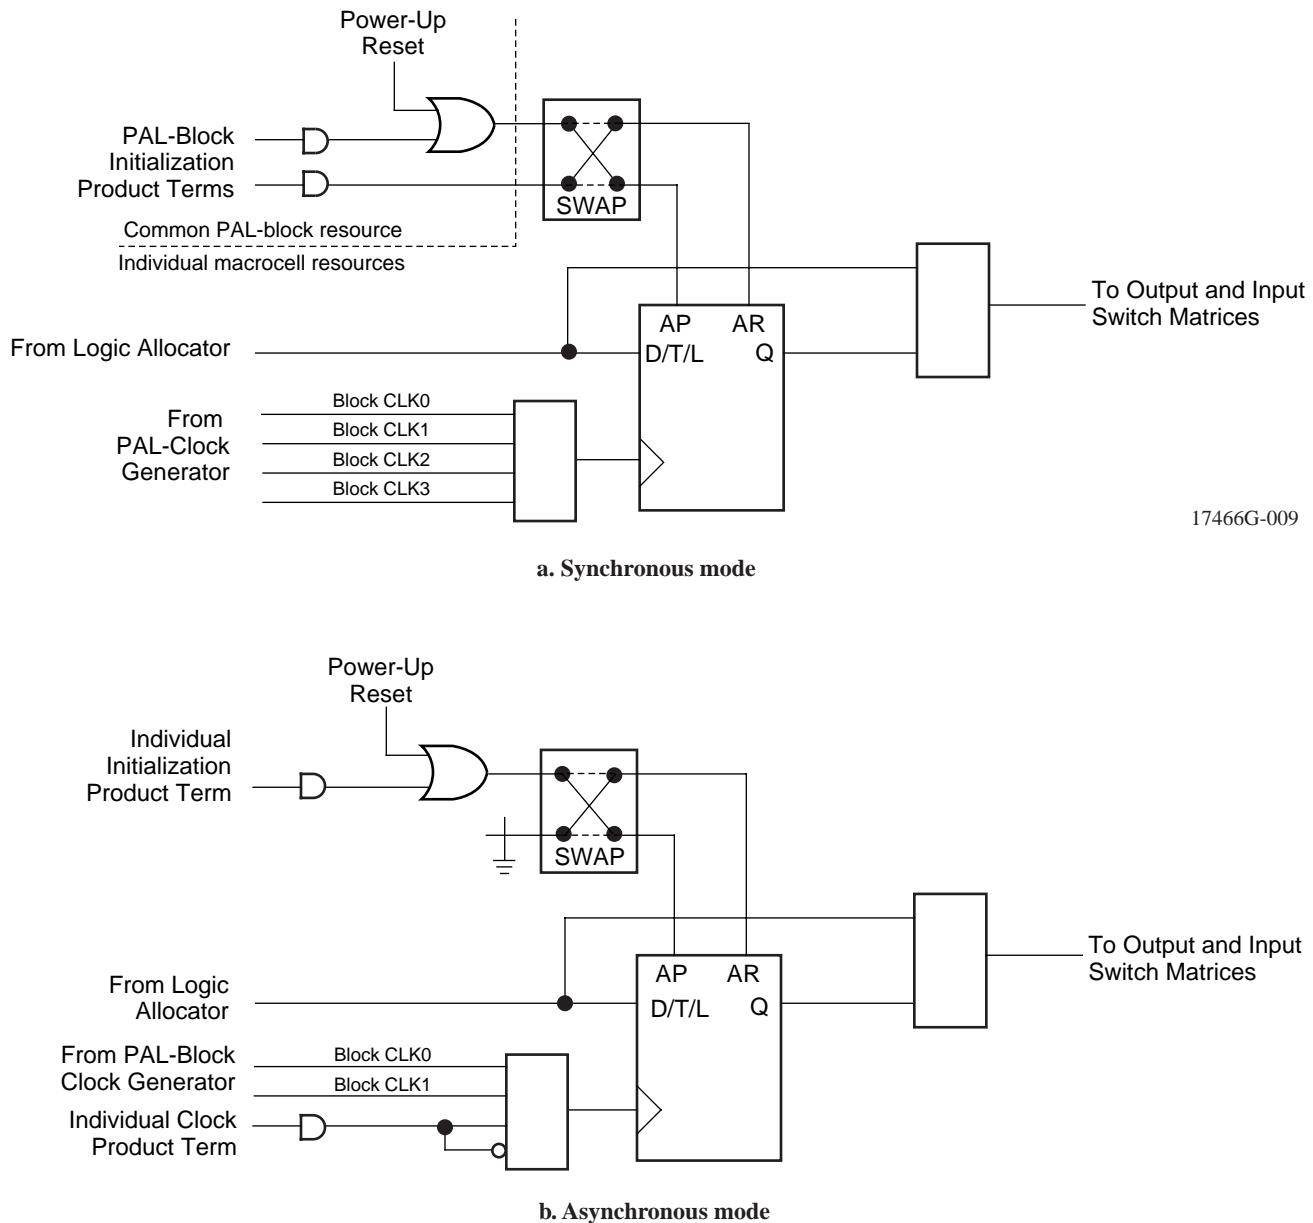

Figure 5. Macrocell

In either mode, a combinatorial path can be used. For combinatorial logic, the synchronous mode will generally be used, since it provides more product terms in the allocator.

A reset/preset swapping feature in each macrocell allows for reset and preset to be exchanged, providing flexibility. In asynchronous mode (Figure 8), a single individual product term is provided for initialization. It can be selected to control reset or preset.

17466G-014

Note that the reset/preset swapping selection feature effects power-up reset as well. The initialization functionality of the flip-flops is illustrated in Table 9. The macrocell sends its data to the output switch matrix and the input switch matrix. The output switch matrix can route this data to an output if so desired. The input switch matrix can send the signal back to the central switch matrix as feedback.

ispMACH 4A TIMING MODEL

The primary focus of the ispMACH 4A timing model is to accurately represent the timing in a ispMACH 4A device, and at the same time, be easy to understand. This model accurately describes all combinatorial and registered paths through the device, making a distinction between internal feedback and external feedback. A signal uses internal feedback when it is fed back into the switch matrix or block without having to go through the output buffer. The input register specifications are also reported as internal feedback. When a signal is fed back into the switch matrix after having gone through the output buffer, it is using external feedback.

The parameter, t_{BUF} , is defined as the time it takes to go from feedback through the output buffer to the I/O pad. If a signal goes to the internal feedback rather than to the I/O pad, the parameter designator is followed by an “i”. By adding t_{BUF} to this internal parameter, the external parameter is derived. For example, $t_{PD} = t_{PDI} + t_{BUF}$. A diagram representing the modularized ispMACH 4A timing model is shown in Figure 15. Refer to the application note entitled *MACH 4 Timing and High Speed Design* for a more detailed discussion about the timing parameters.

17466G-025

Figure 15. ispMACH 4A Timing Model

SPEEDLOCKING FOR GUARANTEED FIXED TIMING

The ispMACH 4A architecture allows allocation of up to 20 product terms to an individual macrocell with the assistance of an XOR gate without incurring additional timing delays.

The design of the switch matrix and PAL blocks guarantee a fixed pin-to-pin delay that is independent of the logic required by the design. Other competitive CPLDs incur serious timing delays as product terms expand beyond their typical 4 or 5 product term limits. Speed and SpeedLocking combine to give designs easy access to the performance required in today's designs.

PIN DESIGNATIONS

CLK = Clock
 GND = Ground
 I = Input
 I/O = Input/Output
 N/C = No Connect
 VCC = Supply Voltage
 TDI = Test Data In
 TCK = Test Clock
 TMS = Test Mode Select
 TDO = Test Data Out

ispMACH 4A PRODUCT ORDERING INFORMATION

ispMACH 4A Devices Commercial and Industrial - 3.3V and 5V

Lattice programmable logic products are available with several ordering options. The order number (Valid Combination) is formed by a combination of:

M4A3-	256 / 128	-7	Y	C	T ₄₈	= 48-pin TQFP for M4A3-32/32 or M4A3-64/32 M4A5-32/32 or M4A5-64/32
FAMILY TYPE						
M4A3- = ispMACH 4A Family Low Voltage Advanced Feature (3.3-V V _{CC})						
M4A5- = ispMACH 4A Family Advanced Feature (5-V V _{CC})						
MACROCELL DENSITY						
32	= 32 Macrocells	192	= 192 Macrocells			
64	= 64 Macrocells	256	= 256 Macrocells			
96	= 96 Macrocells	384	= 384 Macrocells			
128	= 128 Macrocells	512	= 512 Macrocells			
I/Os						
/32	= 32 I/Os in 44-pin PLCC, 44-pin TQFP or 48-pin TQFP					
/48	= 48 I/Os in 100-pin TQFP					
/64	= 64 I/Os in 100-pin TQFP, 100-pin PQFP, or 100-ball caBGA					
/96	= 96 I/Os in 144-pin TQFP or 144-ball fpBGA					
/128	= 128 I/Os in 208-pin PQFP, 256-ball BGA or 256-ball fpBGA					
/160	= 160 I/Os in 208-pin PQFP					
/192	= 192 I/Os in 256-ball BGA or 256-ball fpBGA					
/256	= 256 I/Os in 388-ball fpBGA					
OPERATING CONDITIONS						
C = Commercial (0°C to +70°C)						
I = Industrial (-40°C to +85°C)						
PACKAGE TYPE						
SA = Ball Grid Array (BGA)						
J = Plastic Leaded Chip Carrier (PLCC)						
JN = Lead-free Plastic Leaded Chip Carrier (PLCC)						
V = Thin Quad Flat Pack (TQFP)						
VN = Lead-free Thin Quad Flat Pack (TQFP)						
Y = Plastic Quad Flat Pack (PQFP)						
YN = Lead-free Plastic Quad Flat Pack (PQFP)						
FA = Fine-pitch Ball Grid Array (fpBGA)						
FAN = Lead-free Fine-pitch Ball Grid Array (fpBGA)						
CA = Chip-array Ball Grid Array (caBGA)						
SPEED						
-5 = 5.0 ns t _{PD}						
-55 = 5.5 ns t _{PD}						
-6 = 6.0 ns t _{PD}						
-65 = 6.5 ns t _{PD}						
-7 = 7.5 ns t _{PD}						
-10 = 10 ns t _{PD}						
-12 = 12 ns t _{PD}						
-14 = 14 ns t _{PD}						

*Package obsolete, contact factory.

Conventional Packaging

3.3V Commercial Combinations		
M4A3-32/32	-5, -7, -10	JC, VC, VC48
M4A3-64/32		JC, VC, VC48
M4A3-64/64		VC
M4A3-96/48		VC
M4A3-128/64		YC, VC, CAC
M4A3-192/96	-6, -7, -10	VC, FAC
M4A3-256/128	-55, -65 ¹ , -7, -10	YC, FAC, SAC
M4A3-256/160		YC
M4A3-256/192	-7, -10	FAC
M4A3-384/160		YC
M4A3-384/192	-65, -10, -12	SAC, FAC
M4A3-512/160		YC
M4A3-512/192		FAC
M4A3-512/256	-7, -10, -12	FAC

3.3V Industrial Combinations		
M4A3-32/32		JI, VI, VI48
M4A3-64/32		JI, VI, VI48
M4A3-64/64		VI
M4A3-96/48		VI
M4A3-128/64		YI, VI, CAI
M4A3-192/96		VI, FAI
M4A3-256/128		YI, FAI, SAI
M4A3-256/160		YI
M4A3-256/192	-10, -12	FAI
M4A3-384/160		YI
M4A3-384/192		FAI
M4A3-512/160		YI
M4A3-512/192		FAI
M4A3-512/256	-10, -12, -14	FAI

1. Use 5.5ns for new designs.

5V Commercial Combinations		
M4A5-32/32	-5, -7, -10,	JC, VC, VC48
M4A5-64/32		JC, VC, VC48
M4A5-96/48	-55, -7, -10	VC
M4A5-128/64		YC, VC
M4A5-192/96	-6, -7, -10	VC
M4A5-256/128	-65, -7, -10	YC

5V Industrial Combinations		
M4A5-32/32	-7, -10, -12	JI, VI, VI48
M4A5-64/32		JI, VI, VI48
M4A5-96/48	-7, -10, -12	VI
M4A5-128/64		YI, VI
M4A5-192/96	-7, -10, -12	VI
M4A5-256/128	-10, -12	YI

Lead-free Packaging

3.3V Commercial Combinations		
M4A3-32/32	-5, -7, -10	VNC, VNC48, JNC
M4A3-64/32		VNC, VNC48, JNC
M4A3-64/64	-55, -7, -10	VNC
M4A3-128/64		VNC
M4A3-192/96	-6, -7, -10	VNC
M4A3-256/128	-55, -7, -10	FANC, YNC
M4A3-256/160		YNC
M4A3-256/192	-7, -10	FANC
M4A3-384/192	-65, -10, -12	FANC
M4A3-512/192	-7, -10, -12	FANC

3.3V Industrial Combinations		
M4A3-32/32		VNI, VNI48, JNI
M4A3-64/32	-7, -10, -12	VNI, VNI48, JNI
M4A3-64/64		VNI
M4A3-128/64		VNI
M4A3-192/96		VNI
M4A3-256/128	-10, -12	FANI, YNI
M4A3-256/160		YNI
M4A3-256/192		FANI
M4A3-384/192	-10, -12, -14	FANI
M4A3-512/192		FANI

5V Commercial Combinations		
M4A5-32/32	-5, -7, -10	VNC, VNC48, JNC
M4A5-64/32		VNC, VNC48, JNC
M4A5-96/48	-55, -7, -10	VNC
M4A5-128/64		VNC, YNC
M4A5-192/96	-6, -7, -10	VNC
M4A5-256/128	-65, -7, -10	YNC

5V Industrial Combinations		
M4A5-32/32		VNI, VNI48, JNI
M4A5-64/32	-7, -10, -12	VNI, VNI48, JNI
M4A5-96/48		VNI
M4A5-128/64		VNI, YNI
M4A5-192/96		VNI
M4A5-256/128		YNI

Most ispMACH devices are dual-marked with both Commercial and Industrial grades. The Industrial speed grade is slower, i.e., M4A3-256/128-7YC-10YI

Valid Combinations

Valid Combinations list configurations planned to be supported in volume for this device. Consult the local Lattice sales office to confirm availability of specific valid combinations and to check on newly released combinations.
