

Welcome to <u>E-XFL.COM</u>

#### Understanding <u>Embedded - FPGAs (Field</u> <u>Programmable Gate Array)</u>

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

#### **Applications of Embedded - FPGAs**

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

#### Details

Betans	
Product Status	Active
Number of LABs/CLBs	-
Number of Logic Elements/Cells	24576
Total RAM Bits	147456
Number of I/O	300
Number of Gates	100000
Voltage - Supply	1.14V ~ 1.575V
Mounting Type	Surface Mount
Operating Temperature	0°C ~ 70°C (TA)
Package / Case	484-BGA
Supplier Device Package	484-FPBGA (23x23)
Purchase URL	https://www.e-xfl.com/product-detail/microchip-technology/m1agl1000v2-fg484

Email: info@E-XFL.COM

Address: Room A, 16/F, Full Win Commercial Centre, 573 Nathan Road, Mongkok, Hong Kong

field upgrades with confidence that valuable intellectual property cannot be compromised or copied. Secure ISP can be performed using the industry-standard AES algorithm. The IGLOO family device architecture mitigates the need for ASIC migration at higher user volumes. This makes the IGLOO family a cost-effective ASIC replacement solution, especially for applications in the consumer, networking/communications, computing, and avionics markets.

### Firm-Error Immunity

Firm errors occur most commonly when high-energy neutrons, generated in the upper atmosphere, strike a configuration cell of an SRAM FPGA. The energy of the collision can change the state of the configuration cell and thus change the logic, routing, or I/O behavior in an unpredictable way. These errors are impossible to prevent in SRAM FPGAs. The consequence of this type of error can be a complete system failure. Firm errors do not exist in the configuration memory of IGLOO flash-based FPGAs. Once it is programmed, the flash cell configuration element of IGLOO FPGAs cannot be altered by high-energy neutrons and is therefore immune to them. Recoverable (or soft) errors occur in the user data SRAM of all FPGA devices. These can easily be mitigated by using error detection and correction (EDAC) circuitry built into the FPGA fabric.

### Advanced Flash Technology

The IGLOO family offers many benefits, including nonvolatility and reprogrammability, through an advanced flashbased, 130-nm LVCMOS process with seven layers of metal. Standard CMOS design techniques are used to implement logic and control functions. The combination of fine granularity, enhanced flexible routing resources, and abundant flash switches allows for very high logic utilization without compromising device routability or performance. Logic functions within the device are interconnected through a four-level routing hierarchy.

IGLOO family FPGAs utilize design and process techniques to minimize power consumption in all modes of operation.

### Advanced Architecture

The proprietary IGLOO architecture provides granularity comparable to standard-cell ASICs. The IGLOO device consists of five distinct and programmable architectural features (Figure 1-1 on page 1-4 and Figure 1-2 on page 1-4):

- Flash\*Freeze technology
- FPGA VersaTiles
- Dedicated FlashROM
- Dedicated SRAM/FIFO memory<sup>†</sup>
- Extensive CCCs and PLLs<sup>†</sup>
- Advanced I/O structure

The FPGA core consists of a sea of VersaTiles. Each VersaTile can be configured as a three-input logic function, a D-flip-flop (with or without enable), or a latch by programming the appropriate flash switch interconnections. The versatility of the IGLOO core tile as either a three-input lookup table (LUT) equivalent or a D-flip-flop/latch with enable allows for efficient use of the FPGA fabric. The VersaTile capability is unique to the ProASIC<sup>®</sup> family of third-generation-architecture flash FPGAs.

<sup>†</sup> The AGL015 and AGL030 do not support PLL or SRAM.

Table 2-2 •	Recommended Ope	erating Conditions <sup>1</sup>
-------------	-----------------	---------------------------------

Symbol	Para	Commercial	Industrial	Units	
TJ	Junction Temperature <sup>2</sup>		0 to +85	-40 to +100	°C

	LVPECL differential I/O		3.0 to 3.6	3.0 to 3.6	V

Notes:

1. All parameters representing voltages are measured with respect to GND unless otherwise specified.

- 2. Software Default Junction Temperature Range in the Libero SoC software is set to 0°C to +70°C for commercial, and -40°C to +85°C for industrial. To ensure targeted reliability standards are met across the full range of junction temperatures, Microsemi recommends using custom settings for temperature range before running timing and power analysis tools. For more information on custom settings, refer to the New Project Dialog Box in the Libero SoC Online Help.
- 3. The ranges given here are for power supplies only. The recommended input voltage ranges specific to each I/O standard are given in Table 2-25 on page 2-24. VCCI should be at the same voltage within a given I/O bank.
- 4. All IGLOO devices (V5 and V2) must be programmed with the VCC core voltage at 1.5 V. Applications using the V2 devices powered by 1.2 V supply must switch the core supply to 1.5 V for in-system programming.
- 5. For  $IGLOO^{\mathbb{R}}$  V5 devices
- 6. For IGLOO V2 devices only, operating at VCCI  $\geq$  VCC.
- 7. VPUMP can be left floating during operation (not programming mode).
- 8. VCCPLL pins should be tied to VCC pins. See the "Pin Descriptions" chapter of the IGLOO FPGA Fabric User Guide for further information.
- 9. VMV and VCCI must be at the same voltage within a given I/O bank. VMV pins must be connected to the corresponding VCCI pins. See the "VMVx I/O Supply Voltage (quiet)" on page 3-1 for further information.
- 10. 3.3 V wide range is compliant to the JESD-8B specification and supports 3.0 V VCCI operation.

### Guidelines

### **Toggle Rate Definition**

A toggle rate defines the frequency of a net or logic element relative to a clock. It is a percentage. If the toggle rate of a net is 100%, this means that this net switches at half the clock frequency. Below are some examples:

- The average toggle rate of a shift register is 100% because all flip-flop outputs toggle at half of the clock frequency.
- The average toggle rate of an 8-bit counter is 25%:
  - Bit 0 (LSB) = 100%
  - Bit 1 = 50%
  - Bit 2 = 25%
  - ...
  - Bit 7 (MSB) = 0.78125%
  - Average toggle rate = (100% + 50% + 25% + 12.5% + . . . + 0.78125%) / 8

### Enable Rate Definition

Output enable rate is the average percentage of time during which tristate outputs are enabled. When nontristate output buffers are used, the enable rate should be 100%.

#### Table 2-23 • Toggle Rate Guidelines Recommended for Power Calculation

Component	nponent Definition			
$\alpha_1$	Toggle rate of VersaTile outputs	10%		
$\alpha_2$	I/O buffer toggle rate	10%		

#### Table 2-24 • Enable Rate Guidelines Recommended for Power Calculation

Component	omponent Definition			
β <sub>1</sub>	I/O output buffer enable rate	100%		
β <sub>2</sub>	RAM enable rate for read operations	12.5%		
β <sub>3</sub>	RAM enable rate for write operations	12.5%		

# Table 2-39 • I/O Output Buffer Maximum Resistances<sup>1</sup> Applicable to Standard Plus I/O Banks

Standard	Drive Strength	R <sub>PULL-DOWN</sub> (Ω) <sup>2</sup>	R <sub>PULL-UP</sub> (Ω) <sup>3</sup>
3.3 V LVTTL / 3.3 V LVCMOS	2 mA	100	300

	4 mA	100	112
	6 mA	50	56
	8 mA	50	56
1.5 V LVCMOS	2 mA	200	224
	4 mA	100	112
1.2 V LVCMOS <sup>4</sup>	2 mA	158	164
1.2 V LVCMOS Wide Range <sup>4</sup>	100 μA	Same as regular 1.2 V LVCMOS	Same as regular 1.2 V LVCMOS
3.3 V PCI/PCI-X	Per PCI/PCI-X specification	25	75

Notes:

2. R<sub>(PULL-DOWN-MAX)</sub> = (VOLspec) / I<sub>OLspec</sub>

3. R<sub>(PULL-UP-MAX)</sub> = (VCCImax – VOHspec) / I<sub>OHspec</sub>

4. Applicable to IGLOO V2 Devices operating at VCCI  $\geq$  VCC

<sup>1.</sup> These maximum values are provided for informational reasons only. Minimum output buffer resistance values depend on VCCI, drive strength selection, temperature, and process. For board design considerations and detailed output buffer resistances, use the corresponding IBIS models located at http://www.microsemi.com/soc/download/ibis/default.aspx.

### 2.5 V LVCMOS

Low-Voltage CMOS for 2.5 V is an extension of the LVCMOS standard (JESD8-5) used for general-purpose 2.5 V applications.

2.5 V LVCMOS	v	IL	v	н	VOL	VOH	IOL	юн	IOSH	IOSL	IIL <sup>1</sup>	IIH <sup>2</sup>

t <sub>IWPRE</sub>	Asynchronous Preset Minimum Pulse Width for the Input Data Register	0.19	ns
t <sub>ICKMPWH</sub>	Clock Minimum Pulse Width High for the Input Data Register	0.31	ns
t <sub>ICKMPWL</sub>	Clock Minimum Pulse Width Low for the Input Data Register	0.28	ns

Note: For specific junction temperature and voltage supply levels, refer to Table 2-6 on page 2-7 for derating values.

### **Global Resource Characteristics**

### AGL250 Clock Tree Topology

Clock delays are device-specific. Figure 2-29 is an example of a global tree used for clock routing. The global tree presented in Figure 2-29 is driven by a CCC located on the west side of the AGL250 device. It is used to drive all D-flip-flops in the device.

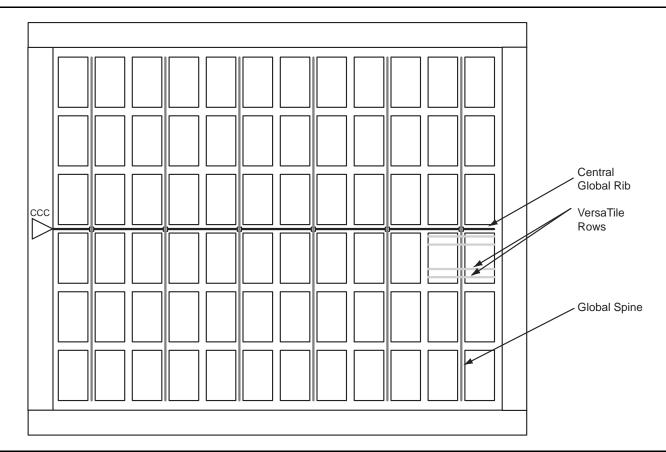

Figure 2-29 • Example of Global Tree Use in an AGL250 Device for Clock Routing

### Table 2-183 • AGL060 Global Resource

Commercial-Case Conditions: T<sub>J</sub> = 70°C, VCC = 1.14 V

		S	Std.	
Parameter	Description	Min. <sup>1</sup>	Max. <sup>2</sup>	Units
t <sub>RCKL</sub>	Input Low Delay for Global Clock	2.04	2.33	ns
t <sub>RCKH</sub>	Input High Delay for Global Clock	2.10	2.51	ns
t <sub>RCKMPWH</sub>	Minimum Pulse Width High for Global Clock	1.40		ns
t <sub>RCKMPWL</sub>	Minimum Pulse Width Low for Global Clock	1.65		ns
t <sub>RCKSW</sub>	Maximum Skew for Global Clock		0.40	ns

Notes:

1. Value reflects minimum load. The delay is measured from the CCC output to the clock pin of a sequential element, located in a lightly loaded row (single element is connected to the global net).

2. Value reflects maximum load. The delay is measured on the clock pin of the farthest sequential element, located in a fully loaded row (all available flip-flops are connected to the global net in the row).

3. For specific junction temperature and voltage supply levels, refer to Table 2-6 on page 2-7 for derating values.

### Table 2-184 • AGL125 Global Resource

#### Commercial-Case Conditions: T<sub>J</sub> = 70°C, VCC = 1.14 V

		Std.		
Parameter	Description	Min. <sup>1</sup>	Max. <sup>2</sup>	Units
t <sub>RCKL</sub>	Input Low Delay for Global Clock	2.08	2.54	ns
t <sub>RCKH</sub>	Input High Delay for Global Clock	2.15	2.77	ns
t <sub>RCKMPWH</sub>	Minimum Pulse Width High for Global Clock	1.40		ns
t <sub>RCKMPWL</sub>	Minimum Pulse Width Low for Global Clock	1.65		ns
t <sub>RCKSW</sub>	Maximum Skew for Global Clock		0.62	ns

Notes:

1. Value reflects minimum load. The delay is measured from the CCC output to the clock pin of a sequential element, located in a lightly loaded row (single element is connected to the global net).

2. Value reflects maximum load. The delay is measured on the clock pin of the farthest sequential element, located in a fully loaded row (all available flip-flops are connected to the global net in the row).

3. For specific junction temperature and voltage supply levels, refer to Table 2-6 on page 2-7 for derating values.

Datasheet Information

### **Datasheet Categories**

### Categories

In order to provide the latest information to designers, some datasheet parameters are published before data has been fully characterized from silicon devices. The data provided for a given device, as highlighted in the "IGLOO Device Status" table, is designated as either "Product Brief," "Advance," "Preliminary," or "Production." The definitions of these categories are as follows:

### **Product Brief**

The product brief is a summarized version of a datasheet (advance or production) and contains general product information. This document gives an overview of specific device and family information.

### Advance

This version contains initial estimated information based on simulation, other products, devices, or speed grades. This information can be used as estimates, but not for production. This label only applies to the DC and Switching Characteristics chapter of the datasheet and will only be used when the data has not been fully characterized.

### Preliminary

The datasheet contains information based on simulation and/or initial characterization. The information is believed to be correct, but changes are possible.

### Unmarked (production)

This version contains information that is considered to be final.

### **Export Administration Regulations (EAR)**

The products described in this document are subject to the Export Administration Regulations (EAR). They could require an approved export license prior to export from the United States. An export includes release of product or disclosure of technology to a foreign national inside or outside the United States.

# Safety Critical, Life Support, and High-Reliability Applications Policy

The Microsemi products described in this advance status document may not have completed Microsemi's qualification process. Microsemi may amend or enhance products during the product introduction and qualification process, resulting in changes in device functionality or performance. It is the responsibility of each customer to ensure the fitness of any Microsemi product (but especially a new product) for a particular purpose, including appropriateness for safety-critical, life-support, and other high-reliability applications. Consult Microsemi's Terms and Conditions for specific liability exclusions relating to life-support applications. A reliability report covering all of the Microsemi SoC Products Group's products is available at http://www.microsemi.com/soc/documents/ORT\_Report.pdf. Microsemi also offers a variety of enhanced qualification and lot acceptance screening procedures. Contact your local Microsemi sales office for additional reliability information.
