Understanding Embedded - FPGAs (Field Programmable Gate Array)

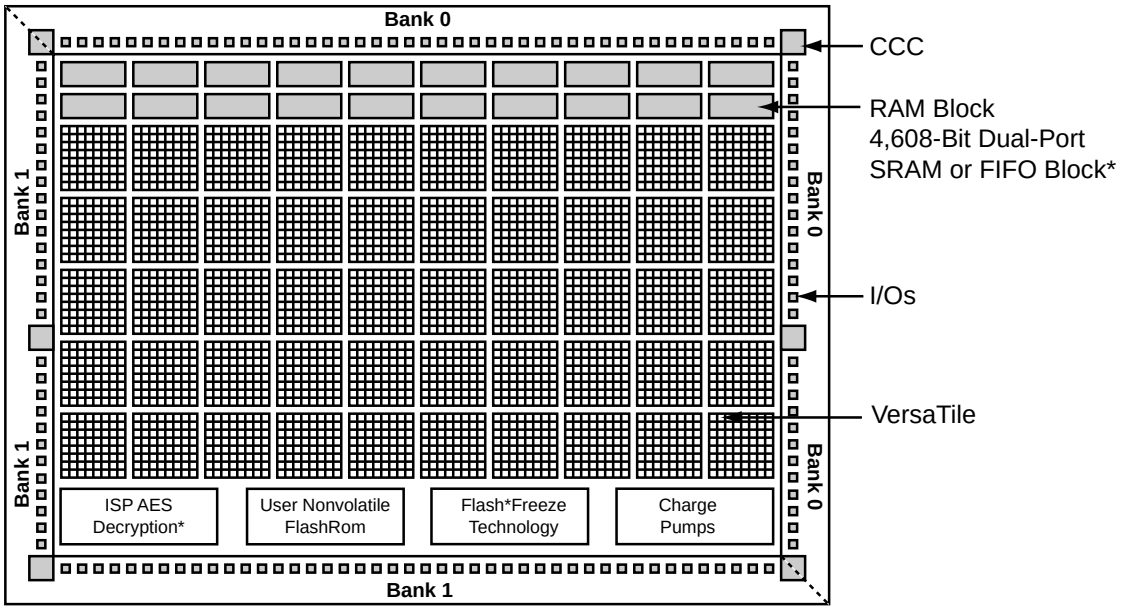
Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Details	
Product Status	Active
Number of LABs/CLBs	-
Number of Logic Elements/Cells	6144
Total RAM Bits	36864
Number of I/O	68
Number of Gates	250000
Voltage - Supply	1.14V ~ 1.575V
Mounting Type	Surface Mount
Operating Temperature	-40°C ~ 85°C (TA)
Package / Case	100-TQFP
Supplier Device Package	100-VQFP (14x14)
Purchase URL	https://www.e-xfl.com/product-detail/microchip-technology/m1agl250v2-vqg100i

VersaTiles are connected with any of the four levels of routing hierarchy. Flash switches are distributed throughout the device to provide nonvolatile, reconfigurable interconnect programming. Maximum core utilization is possible for virtually any design.



*Note: *Not supported by AGL015 and AGL030 devices*

1.2 V LVCMOS (JESD8-12A)

Low-Voltage CMOS for 1.2 V complies with the LVCMOS standard JESD8-12A for general purpose 1.2 V applications. It uses a 1.2 V input buffer and a push-pull output buffer. Furthermore, all LVCMOS 1.2 V software macros comply with LVCMOS 1.2 V wide range as specified in the JESD8-12A specification.

Table 2-127 • Minimum and Maximum DC Input and Output Levels Applicable to Advanced I/O Banks

B-LVDS/M-LVDS

Bus LVDS (B-LVDS) and Multipoint LVDS (M-LVDS) specifications extend the existing LVDS standard to high-performance multipoint bus applications. Multidrop and multipoint bus configurations may contain any combination of drivers, receivers, and transceivers. Microsemi LVDS drivers provide the higher drive current required by B-LVDS and M-LVDS to accommodate the loading. The drivers require series terminations for better signal quality and to control voltage swing. Termination is also required at both ends of the bus since the driver can be located anywhere on the bus. These configurations can be implemented using the TRIBUF_LVDS and BIBUF_LVDS macros along with appropriate terminations. Multipoint designs using Microsemi LVDS macros can achieve up to 200 MHz with a maximum of 20 loads. A sample application is given in Figure 2-14. The input and output buffer delays are available in the LVDS section in Table 2-149 on page 2-81 and Table 2-150 on page 2-81.

Example: For a bus consisting of 20 equidistant loads, the following terminations provide the required differential voltage, in worst-case Industrial operating conditions, at the farthest receiver: R_S = 60 Ω and R_T = 70 Ω, given Z_0 = 50 Ω (2") and Z_{stub} = 50 Ω (~1.5").

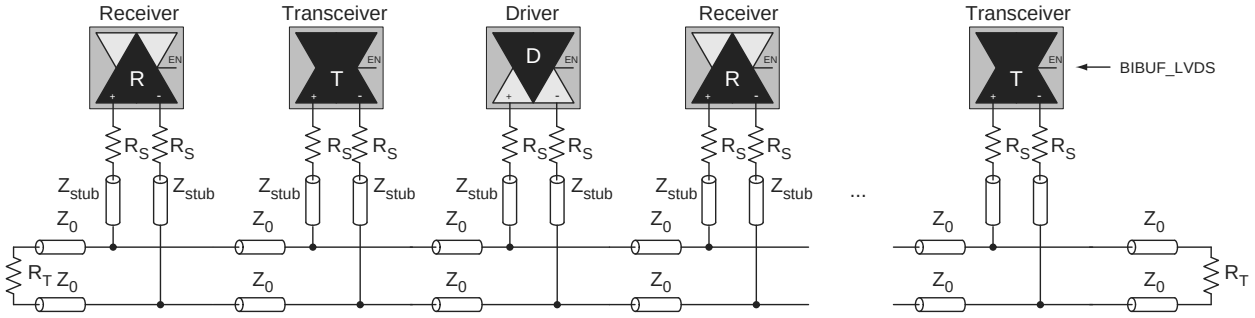

Figure 2-14 • **B-LVDS/M-LVDS Multipoint Application Using LVDS I/O Buffers**

LVPECL

Low-Voltage Positive Emitter-Coupled Logic (LVPECL) is another differential I/O standard. It requires that one data bit be carried through two signal lines. Like LVDS, two pins are needed. It also requires external resistor termination.

The full implementation of the LVDS transmitter and receiver is shown in an example in Figure 2-15. The building blocks of the LVPECL transmitter-receiver are one transmitter macro, one receiver macro, three board resistors at the transmitter end, and one resistor at the receiver end. The values for the three driver resistors are different from those used in the LVDS implementation because the output standard specifications are different.

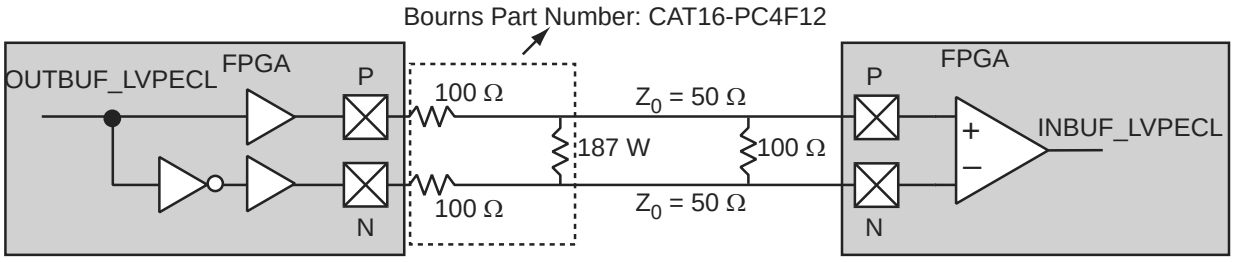

Figure 2-15 • **LVPECL Circuit Diagram and Board-Level Implementation**

Global Tree Timing Characteristics

Global clock delays include the central rib delay, the spine delay, and the row delay. Delays do not include I/O input buffer clock delays, as these are I/O standard–dependent, and the clock may be driven and conditioned internally by the CCC module. For more details on clock conditioning capabilities, refer to the "Clock Conditioning Circuits" section on page 2-115. Table 2-173 to Table 2-188 on page 2-114 present minimum and maximum global clock delays within each device. Minimum and maximum delays are measured with minimum and maximum loading.

Timing Characteristics

1.5 V DC Core Voltage

***Table 2-173* • AGL015 Global Resource**
Commercial-Case Conditions: T_J = 70°C, VCC = 1.425 V

Parameter	Description	Std.		Units
		Min.[1]	Max.[2]	
t_{RCKL}	Input Low Delay for Global Clock	1.21	1.42	ns
t_{RCKH}	Input High Delay for Global Clock	1.23	1.49	ns
$t_{RCKMPWH}$	Minimum Pulse Width High for Global Clock	1.18		ns
$t_{RCKMPWL}$	Minimum Pulse Width Low for Global Clock	1.15		ns
t_{RCKSW}	Maximum Skew for Global Clock		0.27	ns

Notes:

1. *Value reflects minimum load. The delay is measured from the CCC output to the clock pin of a sequential element, located in a lightly loaded row (single element is connected to the global net).*
2. *Value reflects maximum load. The delay is measured on the clock pin of the farthest sequential element, located in a fully loaded row (all available flip-flops are connected to the global net in the row).*
3. *For specific junction temperature and voltage supply levels, refer to Table 2-6 on page 2-7 for derating values.*

***Table 2-174* • AGL030 Global Resource**

5 – Datasheet Information

List of Changes

The following tables list critical changes that were made in each revision of the IGLOO datasheet.

Revision	Changes	Page
Revision 27 (May 2016)	Added the deleted package FG144 from AGL125 device in "IGLOO Devices" (SAR 79355).	1-I
Revision 26 (March 2016)	Updated "IGLOO Ordering Information" and "Temperature Grade Offerings" notes by: • Replacing Commercial (0°C to +70°C Ambient Temperature) with Commercial (0°C to +85°C Junction Temperature) (SAR 48352). • Replacing Industrial (–40°C to +85°C Ambient Temperature) with Industrial (–40°C to +100°C Junction Temperature) (SAR 48352).	1-III and 1-IV
	Ambient temperature row removed in Table 2-2 (SAR 48352).	2-2
	Updated Table 2-2 note 2 from "To ensure targeted reliability standards are met across ambient and junction operating temperatures, Microsemi recommends that the user follow best design practices using Microsemi's timing and power simulation tools." to "Software Default Junction Temperature Range in the Libero SoC software is set to 0°C to +70°C for commercial, and -40°C to +85°C for industrial. To ensure targeted reliability standards are met across the full range of junction temperatures, Microsemi recommends using custom settings for temperature range before running timing and power analysis tools. For more information on custom settings, refer to the New Project Dialog Box in the Libero SoC Online Help." (SAR 77087).	2-2
	Updated Table 2-2 note 9 from "VMV pins must be connected to the corresponding VCCI pins. See the "Pin Descriptions" chapter of the IGLOO FPGA Fabric User Guide for further information." to "VMV and VCCI must be at the same voltage within a given I/O bank. VMV pins must be connected to the corresponding VCCI pins. See the "VMVx I/O Supply Voltage (quiet)" on page 3-1 for further information." (SAR 77087)	2-2
	Added 2 mA drive strengths in tables same as 4 mA (SAR 57179).	NA
	Added reference of Package Mechanical Drawings document in all package pin assignment notes (76777).	NA
Revision 25 (June2015)	Removed package FG144 from AGL060 device in the following tables: "IGLOO Devices", "I/Os Per Package1" and "Temperature Grade Offerings" (SAR 68517)	I, II, and IV
	Removed Package Pin Assignment table of AGL060 device from FG144.(SAR 68517)	-
Revision 24 (March 2014)	Note added for the discontinuance of QN132 package to the following tables: "IGLOO Devices", "I/Os Per Package1", "IGLOO FPGAs Package Sizes Dimensions", and"Temperature Grade Offerings" and "QN132" section (SAR 55117, PDN 1306).	I, II, IV, and 4-28
	Removed packages CS81 and QN132 from AGL250 device in the following tables: "IGLOO Devices", "I/Os Per Package1", and "Temperature Grade Offerings" (SAR 49472).	I, II, and IV
