Embedded - System On Chip (SoC): The Heart of Modern Embedded Systems

Embedded - System On Chip (SoC) refers to an integrated circuit that consolidates all the essential components of a computer system into a single chip. This includes a microprocessor, memory, and other peripherals, all packed into one compact and efficient package. SoCs are designed to provide a complete computing solution, optimizing both space and power consumption, making them ideal for a wide range of embedded applications.

What are Embedded - System On Chip (SoC)?

System On Chip (SoC) integrates multiple functions of a computer or electronic system onto a single chip. Unlike traditional multi-chip solutions, SoCs combine a central

IOB 3-state Output Switching Characteristics

Table 77 specifies the values of T_{OUTBUF_DELAY_TE_PAD} and T_{INBUF_DELAY_IBUFDIS_O}. T_{OUTBUF_DELAY_TE_PAD} is the delay from the T pin to the IOB pad through the output buffer of an IOB pad, when 3-state is enabled (i.e., a high impedance state). T_{INBUF_DELAY_IBUFDIS_O} is the IOB delay from IBUFDISABLE to O output. In HP I/O banks, the internal DCI termination turn-off time is always faster than T_{OUTBUF_DELAY_TE_PAD} when the DCITERMDISABLE pin is used. In HD I/O banks, the internal IN_TERM termination turn-off time is always faster than T_{OUTBUF_DELAY_TE_PAD} when the INTERMDISABLE pin is used.

Table 85: MMCM Specification (Cont'd)

Symbol	Description	Speed Grade and V _{CCINT} Operating Voltages					Units	
		0.90V	0.85V		0.72V			
		-3	-2	-1	-2	-1		
MMCM_F _{DPRCLK_MAX}	Maximum DRP clock frequency	250	250	250	250	250	MHz	

Notes:

1. The MMCM does not filter typical spread-spectrum input clocks because they are usually far below the bandwidth filter frequencies.
2. The static offset is measured between any MMCM outputs with identical phase.
3. Values for this parameter are available in the Clocking Wizard.
4. Includes global clock buffer.
5. Calculated as F_{VCO}/128 assuming output duty cycle is 50%.

Device Pin-to-Pin Output Parameter Guidelines

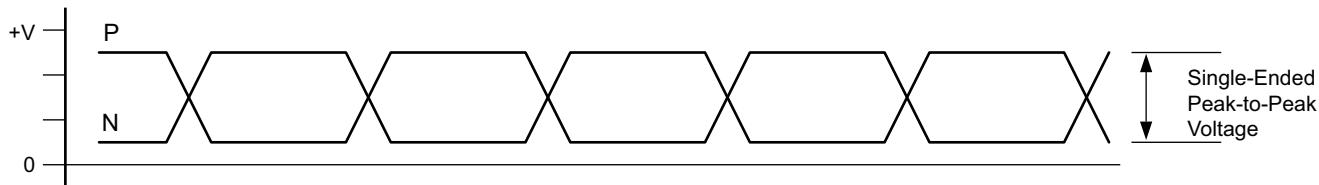

The pin-to-pin numbers in [Table 87](#) through [Table 89](#) are based on the clock root placement in the center of the device. The actual pin-to-pin values will vary if the root placement selected is different. Consult the Vivado Design Suite timing report for the actual pin-to-pin values.
