

Welcome to **E-XFL.COM** 

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "<u>Embedded - Microcontrollers</u>"

Dataila	
Details	
Product Status	Active
Core Processor	ARM® Cortex®-M0
Core Size	32-Bit Single-Core
Speed	24MHz
Connectivity	I <sup>2</sup> C, IrDA, LINbus, Microwire, SmartCard, SPI, SSP, UART/USART
Peripherals	Brown-out Detect/Reset, CapSense, LCD, LVD, POR, PWM, WDT
Number of I/O	36
Program Memory Size	32KB (32K x 8)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	4K x 8
Voltage - Supply (Vcc/Vdd)	1.71V ~ 5.5V
Data Converters	A/D 8x12b SAR; D/A 2xIDAC
Oscillator Type	Internal
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	48-LQFP
Supplier Device Package	48-TQFP (7x7)
Purchase URL	https://www.e-xfl.com/product-detail/infineon-technologies/cy8c4125azi-483

#### **More Information**

Cypress provides a wealth of data at www.cypress.com to help you to select the right PSoC device for your design, and to help you to quickly and effectively integrate the device into your design. For a comprehensive list of resources, see the knowledge base article KBA86521, How to Design with PSoC 3, PSoC 4, and PSoC 5LP. Following is an abbreviated list for PSoC 4:

- Overview: PSoC Portfolio, PSoC Roadmap
- Product Selectors: PSoC 1, PSoC 3, PSoC 4, PSoC 5LP In addition, PSoC Creator includes a device selection tool.
- Application notes: Cypress offers a large number of PSoC application notes covering a broad range of topics, from basic to advanced level. Recommended application notes for getting started with PSoC 4 are:
  - □ AN79953: Getting Started With PSoC 4
  - □ AN88619: PSoC 4 Hardware Design Considerations
  - □ AN86439: Using PSoC 4 GPIO Pins
  - □ AN57821: Mixed Signal Circuit Board Layout
  - □ AN81623: Digital Design Best Practices
  - □ AN73854: Introduction To Bootloaders
  - □ AN89610: ARM Cortex Code Optimization
  - □ AN90071: CY8CMBRxxx CapSense Design Guide

- Technical Reference Manual (TRM) is in two documents:
  - □ Architecture TRM details each PSoC 4 functional block.
  - □ Registers TRM describes each of the PSoC 4 registers.
- Development Kits:
  - □ CY8CKIT-042, PSoC 4 Pioneer Kit, is an easy-to-use and inexpensive development platform. This kit includes connectors for Arduino™ compatible shields and Digilent® Pmod™ daughter cards.
  - □ CY8CKIT-049 is a very low-cost prototyping platform. It is a low-cost alternative to sampling PSoC 4 devices.
  - CY8CKIT-001 is a common development platform for any one of the PSoC 1, PSoC 3, PSoC 4, or PSoC 5LP families of devices.

The MiniProg3 device provides an interface for flash programming and debug.

#### **PSoC Creator**

PSoC Creator is a free Windows-based Integrated Design Environment (IDE). It enables concurrent hardware and firmware design of PSoC 3, PSoC 4, and PSoC 5LP based systems. Create designs using classic, familiar schematic capture supported by over 100 pre-verified, production-ready PSoC Components; see the list of component datasheets. With PSoC Creator, you can:

- 1. Drag and drop component icons to build your hardware system design in the main design workspace
- Codesign your application firmware with the PSoC hardware, using the PSoC Creator IDE C compiler
- 3. Configure components using the configuration tools
- 4. Explore the library of 100+ components
- 5. Review component datasheets

Figure 1. Multiple-Sensor Example Project in PSoC Creator

Figure 2. Block Diagram

The PSoC 4100 devices include extensive support for programming, testing, debugging, and tracing both hardware and firmware.

The ARM Serial\_Wire Debug (SWD) interface supports all programming and debug features of the device.

Complete debug-on-chip functionality enables full device debugging in the final system using the standard production device. It does not require special interfaces, debugging pods, simulators, or emulators. Only the standard programming connections are required to fully support debug.

The PSoC Creator Integrated Development Environment (IDE) provides fully integrated programming and debug support for the PSoC 4100 devices. The SWD interface is fully compatible with industry standard third party tools. With the ability to disable debug features, with very robust flash protection, and by allowing customer-proprietary functionality to be implemented in on-chip programmable blocks, the PSoC 4100 family provides a level of

security not possible with multi-chip application solutions or with microcontrollers.

The debug circuits are enabled by default and can only be disabled in firmware. If not enabled, the only way to re-enable them is to erase the entire device, clear flash protection, and reprogram the device with new firmware that enables debugging.

Additionally, all device interfaces can be permanently disabled (device security) for applications concerned about phishing attacks due to a maliciously reprogrammed device or attempts to defeat security by starting and interrupting flash programming sequences. Because all programming, debug, and test interfaces are disabled when maximum device security is enabled, PSoC 4100 with device security enabled may not be returned for failure analysis. This is a trade-off the PSoC 4100 allows the customer to make.

#### **Functional Definition**

#### **CPU and Memory Subsystem**

#### **CPU**

The Cortex-M0 CPU in PSoC 4100 is part of the 32-bit MCU subsystem, which is optimized for low power operation with extensive clock gating. It mostly uses 16-bit instructions and executes a subset of the Thumb-2 instruction set. This enables fully compatible binary upward migration of the code to higher performance processors such as the Cortex-M3 and M4, thus enabling upward compatibility. The Cypress implementation includes a hardware multiplier that provides a 32-bit result in one cycle. It includes a nested vectored interrupt controller (NVIC) block with 32 interrupt inputs and also includes a Wakeup Interrupt Controller (WIC), which can wake the processor up from Deep Sleep mode allowing power to be switched off to the main processor when the chip is in Deep Sleep mode. The Cortex-M0 CPU provides a Non-Maskable Interrupt input (NMI). which is made available to the user when it is not in use for system functions requested by the user.

The CPU also includes a debug interface, the serial wire debug (SWD) interface, which is a two-wire form of JTAG; the debug configuration used for PSoC 4100 has four break-point (address) comparators and two watchpoint (data) comparators.

#### Flash

PSoC 4100 has a flash module with a flash accelerator tightly coupled to the CPU to improve average access times from the flash block. The flash block is designed to deliver 0 wait-state (WS) access time at 24 MHz. Part of the flash module can be used to emulate EEPROM operation if required.

The PSoC 4200 Flash supports the following flash protection modes at the memory subsystem level:

- Open: No Protection. Factory default mode in which the product is shipped.
- Protected: User may change from Open to Protected. This mode disables Debug interface accesses. The mode can be set back to Open but only after completely erasing the Flash.
- Kill: User may change from Open to Kill. This mode disables all Debug accesses. The part cannot be erased externally, thus obviating the possibility of partial erasure by power interruption and potential malfunction and security leaks. This is an irrecvocable mode.

In addition, row-level Read/Write protection is also supported to prevent inadvertent Writes as well as selectively block Reads. Flash Read/Write/Erase operations are always available for internal code using system calls.

#### SRAM

SRAM memory is retained during Hibernate.

#### **SROM**

A supervisory ROM that contains boot and configuration routines is provided.

#### System Resources

#### Power System

The power system is described in detail in the section Power on page 15. It provides assurance that voltage levels are as required for each respective mode and either delay mode entry (on power-on reset (POR), for example) until voltage levels are as required for proper function or generate resets (brown-out detect (BOD)) or interrupts (low-voltage detect (LVD)). The PSoC 4100 operates with a single external supply over the range of 1.71 V to 5.5 V and has five different power modes, transitions between which are managed by the power system. PSoC 4100 provides Sleep, Deep Sleep, Hibernate, and Stop low-power modes.

#### Clock System

The PSoC 4100 clock system is responsible for providing clocks to all subsystems that require clocks and for switching between different clock sources without glitching. In addition, the clock system ensures that no metastable conditions occur.

The clock system for PSoC 4100 consists of the internal main oscillator (IMO) and the internal low-power oscillator (ILO) and provision for an external clock.

Figure 3. PSoC 4100 MCU Clocking Architecture

The HFCLK signal can be divided down (see PSoC 4100 MCU Clocking Architecture) to generate synchronous clocks for the analog and digital peripherals. There are a total of 12 clock dividers for PSoC 4100, each with 16-bit divide capability. The analog clock leads the digital clocks to allow analog events to occur before digital clock-related noise is generated. The 16-bit capability allows a lot of flexibility in generating fine-grained frequency values and is fully supported in PSoC Creator.

#### IMO Clock Source

The IMO is the primary source of internal clocking in the PSoC 4100. It is trimmed during testing to achieve the specified accuracy. Trim values are stored in nonvolatile latches (NVL). Additional trim settings from flash can be used to compensate for changes. The IMO default frequency is 24 MHz and it can be adjusted between 3 MHz to 24 MHz in steps of 1 MHz. The IMO tolerance with Cypress-provided calibration settings is ±2%.

#### ILO Clock Source

The ILO is a very low power oscillator, which is primarily used to generate clocks for peripheral operation in Deep Sleep mode. ILO-driven counters can be calibrated to the IMO to improve accuracy. Cypress provides a software component, which does the calibration.

#### Watchdog Timer

A watchdog timer is implemented in the clock block running from the ILO; this allows watchdog operation during Deep Sleep and generates a watchdog reset if not serviced before the timeout occurs. The watchdog reset is recorded in the Reset Cause register.

#### Reset

PSoC 4100 can be reset from a variety of sources including a software reset. Reset events are asynchronous and guarantee reversion to a known state. The reset cause is recorded in a register, which is sticky through reset and allows software to determine the cause of the reset. An XRES pin is reserved for external reset to avoid complications with configuration and multiple pin functions during power-on or reconfiguration. The XRES pin has an internal pull-up resistor that is always enabled.

#### Voltage Reference

The PSoC 4100 reference system generates all internally required references. A 1% voltage reference spec is provided for the 12-bit ADC. To allow better signal to noise ratios (SNR) and better absolute accuracy, it is possible to bypass the internal reference using a GPIO pin or to use an external reference for the SAR.

#### **Analog Blocks**

#### 12-bit SAR ADC

The 12-bit 806 ksps SAR ADC can operate at a maximum clock rate of 14.5 MHz and requires a minimum of 18 clocks at that frequency to do a 12-bit conversion.

The block functionality is augmented for the user by adding a reference buffer to it (trimmable to  $\pm 1\%$ ) and by providing the choice (for the PSoC 4100 case) of three internal voltage references:  $V_{DD},\,V_{DD}/2,\,$  and  $V_{REF}$  (nominally 1.024 V) as well as an external reference through a GPIO pin. The sample-and-hold (S/H) aperture is programmable allowing the gain bandwidth requirements of the amplifier driving the SAR inputs, which determine its settling time, to be relaxed if required. System performance will be 65 dB for true 12-bit precision providing appropriate references are used and system noise levels permit. To improve performance in noisy conditions, it is possible to provide an external bypass (through a fixed pin location) for the internal reference amplifier.

The SAR is connected to a fixed set of pins through an 8-input sequencer. The sequencer cycles through selected channels autonomously (sequencer scan) and does so with zero switching overhead (that is, aggregate sampling bandwidth is equal to 806 ksps whether it is for a single channel or distributed over several channels). The sequencer switching is effected through a state machine or through firmware driven switching. A feature provided by the sequencer is buffering of each channel to reduce CPU interrupt service requirements. To accommodate signals with varying source impedance and frequency, it is possible to have different sample times programmable for each channel. Also, signal range specification through a pair of range registers (low and high range values) is implemented with a corresponding out-of-range interrupt if the digitized value exceeds the programmed range; this allows fast detection of out-of-range values without the necessity of having to wait for a sequencer scan to be completed and the CPU to read the values and check for out-of-range values in software.

The SAR is able to digitize the output of the on-board temperature sensor for calibration and other temperature-dependent functions. The SAR is not available in Deep Sleep and Hibernate modes as it requires a high-speed clock (up to 18 MHz). The SAR operating range is 1.71 V to 5.5 V.

Figure 4. SAR ADC System Diagram

## **Pinouts**

The following is the pin-list for PSoC 4100 (44-TQFP, 40-QFN, 28-SSOP, and 48-TQFP). Port 2 comprises of the high-speed Analog inputs for the SAR Mux. P1.7 is the optional external input and bypass for the SAR reference. Ports 3 and 4 contain the Digital Communication channels. All pins support CSD CapSense and analog mux bus connections.

#### **Power**

The following power system diagrams show the minimum set of power supply pins as implemented for PSoC 4100. The system has one regulator in Active mode for the digital circuitry. There is no analog regulator; the analog circuits run directly from the  $V_{DDA}$  input. There are separate regulators for the Deep Sleep and Hibernate (lowered power supply and retention) modes. There is a separate low-noise regulator for the bandgap. The supply voltage range is 1.71 V to 5.5 V with all functions and circuits operating over that range.

Figure 10. PSoC 4 Power Supply

The PSoC 4100 family allows two distinct modes of power supply operation: Unregulated External Supply, and Regulated External Supply modes.

#### **Unregulated External Supply**

In this mode, PSoC 4100 is powered by an external power supply that can be anywhere in the range of 1.8 V to 5.5 V. This range is also designed for battery-powered operation, for instance, the chip can be powered from a battery system that starts at 3.5 V and works down to 1.8 V. In this mode, the internal regulator of PSoC 4100 supplies the internal logic and the  $V_{CCD}$  output of the PSoC 4100 must be bypassed to ground via an external Capacitor (in the range of 1  $\mu F$  to 1.6  $\mu F$ ; X5R ceramic or better).

 $V_{DDA}$  and  $V_{DDD}$  must be shorted together; the grounds, VSSA and  $V_{SS}$  must also be shorted together. Bypass capacitors must be used from  $V_{DDD}$  to ground, typical practice for systems in this frequency range is to use a capacitor in the 1- $\mu F$  range in parallel with a smaller capacitor (0.1  $\mu F$  for example). Note that these are simply rules of thumb and that, for critical applications, the PCB layout, lead inductance, and the Bypass capacitor parasitic should be simulated to design and obtain optimal bypassing.

Figure 11. 48-TQFP Package Example

Figure 12. 44-TQFP Package Example

Power Supply	Bypass Capacitors
VDDD-VSS	0.1 $\mu F$ ceramic at each pin (C2, C6) plus bulk capacitor 1 to 10 $\mu F$ (C1). Total capacitance may be greater than 10 $\mu F$ .
VDDA-VSSA	0.1 μF ceramic at pin (C4). Additional 1 μF to 10 μF (C3) bulk capacitor. Total capacitance may be greater than 10 μF.
VCCD-VSS	1 μF ceramic capacitor at the VCCD pin (C5)
VREF-VSSA (optional)	The internal bandgap may be bypassed with a 1 $\mu$ F to 10 $\mu$ F capacitor. Total capacitance may be greater than 10 $\mu$ F.

## **Development Support**

The PSoC 4100 family has a rich set of documentation, development tools, and online resources to assist you during your development process. Visit <a href="https://www.cypress.com/go/psoc4">www.cypress.com/go/psoc4</a> to find out more.

#### **Documentation**

A suite of documentation supports the PSoC 4100 family to ensure that you can find answers to your questions quickly. This section contains a list of some of the key documents.

**Software User Guide**: A step-by-step guide for using PSoC Creator. The software user guide shows you how the PSoC Creator build process works in detail, how to use source control with PSoC Creator, and much more.

**Component Datasheets**: The flexibility of PSoC allows the creation of new peripherals (components) long after the device has gone into production. Component data sheets provide all of the information needed to select and use a particular component, including a functional description, API documentation, example code, and AC/DC specifications.

**Application Notes**: PSoC application notes discuss a particular application of PSoC in depth; examples include brushless DC motor control and on-chip filtering. Application notes often include example projects in addition to the application note document.

**Technical Reference Manual**: The Technical Reference Manual (TRM) contains all the technical detail you need to use a PSoC device, including a complete description of all PSoC registers. The TRM is available in the Documentation section at www.cypress.com/psoc4.

#### Online

In addition to print documentation, the Cypress PSoC forums connect you with fellow PSoC users and experts in PSoC from around the world, 24 hours a day, 7 days a week.

#### **Tools**

With industry standard cores, programming, and debugging interfaces, the PSoC 4100 family is part of a development tool ecosystem. Visit us at <a href="https://www.cypress.com/go/psoccreator">www.cypress.com/go/psoccreator</a> for the latest information on the revolutionary, easy to use PSoC Creator IDE, supported third party compilers, programmers, debuggers, and development kits.

**GPIO** 

## Table 4. GPIO DC Specifications

Spec ID#	Parameter	Description	Min	Тур	Max	Units	Details/ Conditions
SID57	V <sub>IH</sub> <sup>[2]</sup>	Input voltage high threshold	0.7 × V <sub>DDD</sub>	_	_	V	CMOS Input
SID58	V <sub>IL</sub>	Input voltage low threshold	_	_	0.3 × V <sub>DDD</sub>	V	CMOS Input
SID241	V <sub>IH</sub> <sup>[2]</sup>	LVTTL input, V <sub>DDD</sub> < 2.7 V	0.7× V <sub>DDD</sub>	_	-	V	
SID242	V <sub>IL</sub>	LVTTL input, V <sub>DDD</sub> < 2.7 V	_	_	0.3 × V <sub>DDD</sub>	V	
SID243	V <sub>IH</sub> <sup>[2]</sup>	LVTTL input, V <sub>DDD</sub> ≥ 2.7 V	2.0	_		V	
SID244	V <sub>IL</sub>	LVTTL input, V <sub>DDD</sub> ≥ 2.7 V	_	_	8.0	V	
SID59	V <sub>OH</sub>	Output voltage high level	V <sub>DDD</sub> -0.6	_	-	V	I <sub>OH</sub> = 4 mA at 3-V V <sub>DDD</sub>
SID60	V <sub>OH</sub>	Output voltage high level	V <sub>DDD</sub> -0.5	_	-	V	I <sub>OH</sub> = 1 mA at 1.8-V V <sub>DDD</sub>
SID61	V <sub>OL</sub>	Output voltage low level	_	_	0.6	V	$I_{OL}$ = 4 mA at 1.8-V $V_{DDD}$
SID62	V <sub>OL</sub>	Output voltage low level	_	_	0.6	V	$I_{OL} = 8 \text{ mA at } 3-V$ $V_{DDD}$
SID62A	V <sub>OL</sub>	Output voltage low level	-	-	0.4	V	$I_{OL} = 3 \text{ mA at } 3-V$ $V_{DDD}$
SID63	R <sub>PULLUP</sub>	Pull-up resistor	3.5	5.6	8.5	kΩ	
SID64	R <sub>PULLDOWN</sub>	Pull-down resistor	3.5	5.6	8.5	kΩ	
SID65	I <sub>IL</sub>	Input leakage current (absolute value)	-	-	2	nA	25 °C, V <sub>DDD</sub> = 3.0-V
SID65A	I <sub>IL_CTBM</sub>	Input leakage current (absolute value) for CTBM pins	_	_	4	nA	
SID66	C <sub>IN</sub>	Input capacitance	_	_	7	pF	
SID67	V <sub>HYSTTL</sub>	Input hysteresis LVTTL	25	40	-	mV	V <sub>DDD</sub> ≥ 2.7 V. Guaranteed by characterization
SID68	V <sub>HYSCMOS</sub>	Input hysteresis CMOS	0.05 × V <sub>DDD</sub>	_	_	mV	Guaranteed by characterization
SID69	I <sub>DIODE</sub>	Current through protection diode to V <sub>DD</sub> /Vss	_	_	100	μΑ	Guaranteed by characterization
SID69A	I <sub>TOT_GPIO</sub>	Maximum Total Source or Sink Chip Current	_	_	200	mA	Guaranteed by characterization

Note 2.  $V_{IH}$  must not exceed  $V_{DDD}$  + 0.2 V.

Document Number: 001-87220 Rev. \*H

Table 5. GPIO AC Specifications (Guaranteed by Characterization)

Spec ID#	Parameter	Description	Min	Тур	Max	Units	Details/ Conditions
SID70	T <sub>RISEF</sub>	Rise time in fast strong mode	2	-	12	ns	3.3-V V <sub>DDD</sub> , Cload = 25 pF
SID71	T <sub>FALLF</sub>	Fall time in fast strong mode	2	_	12	ns	3.3-V V <sub>DDD</sub> , Cload = 25 pF
SID72	T <sub>RISES</sub>	Rise time in slow strong mode	10	_	60	ns	3.3-V V <sub>DDD</sub> , Cload = 25 pF
SID73	T <sub>FALLS</sub>	Fall time in slow strong mode	10	_	60	ns	3.3-V V <sub>DDD</sub> , Cload = 25 pF
SID74	F <sub>GPIOUT1</sub>	GPIO Fout;3.3 V $\leq$ V <sub>DDD</sub> $\leq$ 5.5 V. Fast strong mode.	-	-	24	MHz	90/10%, 25-pF load, 60/40 duty cycle
SID75	F <sub>GPIOUT2</sub>	GPIO Fout;1.7 $V \le V_{DDD} \le 3.3 \text{ V. Fast strong mode.}$	-	-	16.7	MHz	90/10%, 25-pF load, 60/40 duty cycle
SID76	F <sub>GPIOUT3</sub>	GPIO Fout;3.3 V $\leq$ V <sub>DDD</sub> $\leq$ 5.5 V. Slow strong mode.	-	-	7	MHz	90/10%, 25-pF load, 60/40 duty cycle
SID245	F <sub>GPIOUT4</sub>	GPIO Fout; 1.7 V $\leq$ V <sub>DDD</sub> $\leq$ 3.3 V. Slow strong mode.	-	-	3.5	MHz	90/10%, 25-pF load, 60/40 duty cycle
SID246	F <sub>GPIOIN</sub>	GPIO input operating frequency; 1.71 V $\leq$ V <sub>DDD</sub> $\leq$ 5.5 V	-	_	24	MHz	90/10% V <sub>IO</sub>

## XRES

## Table 6. XRES DC Specifications

Spec ID#	Parameter	Description	Min	Тур	Max	Units	Details/ Conditions
SID77	V <sub>IH</sub>	Input voltage high threshold	0.7 × V <sub>DDD</sub>	-	_	V	CMOS Input
SID78	V <sub>IL</sub>	Input voltage low threshold	_	1	0.3 × V <sub>DDD</sub>	V	CMOS Input
SID79	R <sub>PULLUP</sub>	Pull-up resistor	3.5	5.6	8.5	kΩ	
SID80	C <sub>IN</sub>	Input capacitance	_	3	_	pF	
SID81	V <sub>HYSXRES</sub>	Input voltage hysteresis	_	100	_	mV	Guaranteed by characterization
SID82	I <sub>DIODE</sub>	Current through protection diode to $V_{DDD}/V_{SS}$	_	-	100	μA	Guaranteed by characterization

## Table 7. XRES AC Specifications

Spec ID#	Parameter	Description	Min	Тур	Max	Units	Details/ Conditions
SID83	T <sub>RESETWIDTH</sub>	Reset pulse width	1	1	1	μs	Guaranteed by characterization

Document Number: 001-87220 Rev. \*H Page 21 of 43

## Table 10. Comparator AC Specifications

(Guaranteed by Characterization)

Spec ID#	Parameter	Description	Min	Тур	Max	Units	Details/Conditions
SID91	T <sub>RESP1</sub>	Response time, normal mode	-	-	110	ns	50-mV overdrive
SID258	T <sub>RESP2</sub>	Response time, low power mode	1	-	200	ns	50-mV overdrive
SID92	T <sub>RESP3</sub>	Response time, ultra low power mode $(V_{DDD} \ge 2.2 \text{ V for Temp} < 0 ^{\circ}\text{C}, V_{DDD} \ge 1.8 \text{ V for Temp} > 0 ^{\circ}\text{C})$	_	_	15	μs	200-mV overdrive

## Temperature Sensor

## **Table 11. Temperature Sensor Specifications**

Spec ID#	Parameter	Description	Min	Тур	Max	Units	Details/Conditions
SID93	T <sub>SENSACC</sub>	Temperature sensor accuracy	<b>-</b> 5	±1	+5	°C	–40 to +85 °C

## SAR ADC

## Table 12. SAR ADC DC Specifications

Spec ID#	Parameter	Description	Min	Тур	Max	Units	Details/Conditions
SID94	A_RES	Resolution	_	-	12	bits	
SID95	A_CHNIS_S	Number of channels - single ended	_	-	8		8 full speed
SID96	A-CHNKS_D	Number of channels - differential	-	-	4		Diff inputs use neighboring I/O
SID97	A-MONO	Monotonicity	_	-	_		Yes. Based on characterization
SID98	A_GAINERR	Gain error	-	_	±0.1	%	With external reference. Guaranteed by characterization
SID99	A_OFFSET	Input offset voltage	_	ı	2	mV	Measured with 1-V V <sub>REF.</sub> Guaranteed by characterization
SID100	A_ISAR	Current consumption	_	_	1	mA	
SID101	A_VINS	Input voltage range - single ended	V <sub>SS</sub>	_	$V_{DDA}$	V	Based on device characterization
SID102	A_VIND	Input voltage range - differential	V <sub>SS</sub>	-	$V_{DDA}$	V	Based on device characterization
SID103	A_INRES	Input resistance	-	_	2.2	ΚΩ	Based on device characterization
SID104	A_INCAP	Input capacitance	_	-	10	pF	Based on device characterization
SID106	A_PSRR	Power supply rejection ratio	70	-	-	dB	
SID107	A_CMRR	Common mode rejection ratio	66	_	_	dB	Measured at 1 V
SID111	A_INL	Integral non linearity	-1.7	_	+2	LSB	V <sub>DD</sub> = 1.71 to 5.5, 806 ksps, V <sub>REF</sub> = 1 to 5.5.
SID111A	A_INL	Integral non linearity	-1.5	_	+1.7	LSB	V <sub>DDD</sub> = 1.71 to 3.6, 806 ksps, V <sub>REF</sub> = 1.71 to V <sub>DDD</sub> .

Document Number: 001-87220 Rev. \*H Page 24 of 43

## Table 12. SAR ADC DC Specifications (continued)

Spec ID#	Parameter	Description	Min	Тур	Max	Units	Details/Conditions
SID111B	A_INL	Integral non linearity	-1.5	-	+1.7	LSB	V <sub>DDD</sub> = 1.71 to 5.5, 500 ksps, V <sub>REF</sub> = 1 to 5.5.
SID112	A_DNL	Differential non linearity	-1	_	+2.2	LSB	V <sub>DDD</sub> = 1.71 to 5.5, 806 ksps, V <sub>REF</sub> = 1 to 5.5.
SID112A	A_DNL	Differential non linearity	-1	1	+2	LSB	V <sub>DDD</sub> = 1.71 to 3.6, 806 ksps, V <sub>REF</sub> = 1.71 to V <sub>DDD</sub> .
SID112B	A_DNL	Differential non linearity	-1	-	+2.2	LSB	V <sub>DDD</sub> = 1.71 to 5.5, 500 ksps, V <sub>REF</sub> = 1 to 5.5.

## Table 13. SAR ADC AC Specifications (Guaranteed by Characterization)

Spec ID#	Parameter	Description	Min	Тур	Max	Units	Details/Conditions
SID108	A_SAMP_1	Sample rate with external reference bypass cap	_	_	806	ksps	
SID108A	A_SAMP_2	Sample rate with no bypass cap. Reference = V <sub>DD</sub>	_	_	500	ksps	
SID108B	A_SAMP_3	Sample rate with no bypass cap. Internal reference	_	_	100	ksps	
SID109	A_SNDR	Signal-to-noise and distortion ratio (SINAD)	65	-	_	dB	F <sub>IN</sub> = 10 kHz
SID113	A_THD	Total harmonic distortion	-	_	-65	dB	F <sub>IN</sub> = 10 kHz.

Document Number: 001-87220 Rev. \*H Page 25 of 43

## **Digital Peripherals**

The following specifications apply to the Timer/Counter/PWM peripheral in timer mode.

Timer/Counter/PWM

## **Table 15. TCPWM Specifications**

(Guaranteed by Characterization)

Spec ID	Parameter	Description	Min	Тур	Max	Units	Details/Conditions
SID.TCPWM.1	ITCPWM1	Block current consumption at 3 MHz	-	-	45	μA	All modes (TCPWM)
SID.TCPWM.2	ITCPWM2	Block current consumption at 12 MHz	_	-	155	μA	All modes (TCPWM)
SID.TCPWM.2A	ITCPWM3	Block current consumption at 48 MHz	-	_	650	μA	All modes (TCPWM)
SID.TCPWM.3	TCPWMFREQ	Operating frequency	_	-	Fc	MHz	Fc max = Fcpu. Maximum = 24 MHz
SID.TCPWM.4	TPWMENEXT	Input Trigger Pulse Width for all Trigger Events	2/Fc	-	-	ns	Trigger events can be Stop, Start, Reload, Count, Capture, or Kill depending on which mode of operation is selected.
SID.TCPWM.5	TPWMEXT	Output Trigger Pulse widths	2/Fc	-	_	ns	Minimum possible width of Overflow, Underflow, and CC (Counter equals Compare value) trigger outputs
SID.TCPWM.5A	TCRES	Resolution of Counter	1/Fc	_	_	ns	Minimum time between successive counts
SID.TCPWM.5B	PWMRES	PWM Resolution	1/Fc	_	_	ns	Minimum pulse width of PWM Output
SID.TCPWM.5C	QRES	Quadrature inputs resolution	1/Fc	-	_	ns	Minimum pulse width between Quadrature phase inputs.

P<sub>C</sub>

## Table 16. Fixed I<sup>2</sup>C DC Specifications (Guaranteed by Characterization)

Spec ID	Parameter	Description	Min	Тур	Max	Units	Details/Conditions
SID149	I <sub>I2C1</sub>	Block current consumption at 100 kHz	-	-	50	μA	
SID150	I <sub>I2C2</sub>	Block current consumption at 400 kHz	_	_	135	μA	
SID151	I <sub>I2C3</sub>	Block current consumption at 1 Mbps	_	_	310	μA	
SID152	I <sub>I2C4</sub>	I <sup>2</sup> C enabled in Deep Sleep mode	-	-	1.4	μΑ	

## Table 17. Fixed I<sup>2</sup>C AC Specifications (Guaranteed by Characterization)

Spec ID	Parameter	Description	Min	Тур	Max	Units	Details/Conditions
SID153	F <sub>I2C1</sub>	Bit rate	_	_	1	Mbps	

LCD Direct Drive

#### Table 18. LCD Direct Drive DC Specifications (Guaranteed by Characterization)

Spec ID	Parameter	Description	Min	Тур	Max	Units	Details/Conditions
SID154	I <sub>LCDLOW</sub>	Operating current in low power mode	_	5	_	μA	16 × 4 small segment disp. at 50 Hz
SID155	C <sub>LCDCAP</sub>	LCD capacitance per segment/common driver	_	500	5000	pF	Guaranteed by Design
SID156	LCD <sub>OFFSET</sub>	Long-term segment offset	_	20	_	mV	
SID157	I <sub>LCDOP1</sub>	PWM Mode current. 5-V bias. 24-MHz IMO. 25 °C	_	0.6	_	mA	32 × 4 segments. 50 Hz
SID158	I <sub>LCDOP2</sub>	PWM Mode current. 3.3-V bias. 24-MHz IMO. 25 °C	-	0.5	_	mA	32 × 4 segments. 50 Hz

Document Number: 001-87220 Rev. \*H Page 27 of 43

# **Acronyms**

Table 43. Acronyms Used in this Document

Acronym	Description
abus	analog local bus
ADC	analog-to-digital converter
AG	analog global
АНВ	AMBA (advanced microcontroller bus architecture) high-performance bus, an ARM data transfer bus
ALU	arithmetic logic unit
AMUXBUS	analog multiplexer bus
API	application programming interface
APSR	application program status register
ARM <sup>®</sup>	advanced RISC machine, a CPU architecture
ATM	automatic thump mode
BW	bandwidth
CAN	Controller Area Network, a communications protocol
CMRR	common-mode rejection ratio
CPU	central processing unit
CRC	cyclic redundancy check, an error-checking protocol
DAC	digital-to-analog converter, see also IDAC, VDAC
DFB	digital filter block
DIO	digital input/output, GPIO with only digital capabilities, no analog. See GPIO.
DMIPS	Dhrystone million instructions per second
DMA	direct memory access, see also TD
DNL	differential nonlinearity, see also INL
DNU	do not use
DR	port write data registers
DSI	digital system interconnect
DWT	data watchpoint and trace
ECC	error correcting code
ECO	external crystal oscillator
EEPROM	electrically erasable programmable read-only memory
EMI	electromagnetic interference
EMIF	external memory interface
EOC	end of conversion
EOF	end of frame
EPSR	execution program status register
ESD	electrostatic discharge

## **Units of Measure**

## Table 44. Units of Measure

Table 44. Units of Measure				
Symbol	Unit of Measure			
°C	degrees Celsius			
dB	decibel			
fF	femto farad			
Hz	hertz			
KB	1024 bytes			
kbps	kilobits per second			
Khr	kilohour			
kHz	kilohertz			
kΩ	kilo ohm			
ksps	kilosamples per second			
LSB	least significant bit			
Mbps	megabits per second			
MHz	megahertz			
ΜΩ	mega-ohm			
Msps	megasamples per second			
μΑ	microampere			
μF	microfarad			
μH	microhenry			
μs	microsecond			
μV	microvolt			
μW	microwatt			
mA	milliampere			
ms	millisecond			
mV	millivolt			
nA	nanoampere			
ns	nanosecond			
nV	nanovolt			
Ω	ohm			
pF	picofarad			
ppm	parts per million			
ps	picosecond			
s	second			
sps	samples per second			
sqrtHz	square root of hertz			
V	volt			
L	ı

# **Revision History**

Revision	ECN	Orig. of Change	Submission Date	Description of Change
*B	4108562	WKA	08/29/2013	Added clarifying note about the XRES pin in the Reset section.  Added a link reference to the PSoC 4 TRM.  Updated the footnote in Absolute Maximum Ratings.  Updated Sleep Mode IDD specs in DC Specifications.  Updated Comparator DC Specifications  Updated SAR ADC AC Specifications (Guaranteed by Characterization)  Updated LCD Direct Drive DC Specifications (Guaranteed by Characterization)  Updated the number of GPIOs in Ordering Information.
*C	4568937	WKA	11/19/2014	Added 48-pin TQFP pin and package details. Added SID308A spec details. Updated Ordering Information.
*D	4617283	WKA	01/08/2015	Corrected typo in the ordering information table. Updated 28-pin SSOP package diagram.
*E	4643655	WKA	04/29/2015	Added 35 WLCSP pinout and package detail information. Updated CSD specifications.
*F	5287114	WKA	06/09/2016	Corrected typo in the Features section. Added reference to AN90071 in the More Information section. Updated Flash section with details of flash protection modes. Added notes in the Pinouts section. Updated 40-pin QFN and 28-pin SSOP pin diagrams. Added PSoC 4 Power Supply diagram. Updated the Bypass Capacitors column in the Power Supply table. Updated values for SID32, SID34, SID38, SID269, SID270, SID271. Added SID299A. Updated Comparator Specifications. Updated TCPWM Specifications. Updated values for SID149, SID160, SID171. Updated Conditions for SID190. Added BID55. Removed Conditions for SID237. Added reference to PSoC 4 CAB Libraries with Schematics Symbols and PCB Footprints in the Packaging section.
*G	5327384	WKA	06/28/2016	Removed the capacitor connection for Pin 15 in Figure 11.
*H	5704046	GNKK	04/26/2017	Updated the Cypress logo and copyright information.
