What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Obsolete
Core Processor	F²MC-16LX
Core Size	16-Bit
Speed	32MHz
Connectivity	CANbus, LINbus, UART/USART
Peripherals	LCD, LVD, POR, PWM, WDT
Number of I/O	93
Program Memory Size	256KB (256K x 8)
Program Memory Type	Mask ROM
EEPROM Size	-
RAM Size	10K x 8
Voltage - Supply (Vcc/Vdd)	4V ~ 5.5V
Data Converters	A/D 8x8/10b
Oscillator Type	External
Operating Temperature	-40°C ~ 105°C (TA)
Mounting Type	Surface Mount
Package / Case	120-LQFP
Supplier Device Package	120-LQFP (16x16)

■ HANDLING DEVICES

• Strictly observe maximum rated voltages (preventing latch-up)

In CMOS IC devices, a condition known as latch-up may occur if voltages higher than V_{CC} or lower than V_{SS} are applied to input or output pins other than medium or high withstand voltage pins, or if the voltage applied between VCC and VSS pins exceeds the rated voltage level. If a latch-up occurs, the power supply current may increase dramatically and may destroy semiconductor elements. When using semiconductor devices, always take sufficient care to avoid exceeding maximum ratings.

When the analog system power supply is switched on or off, be careful not to apply the analog power supply (AV_{CC}, AVRH), the analog input voltages and the power supply voltage for the high current output buffer pins (DV_{CC}) in excess of the digital power supply voltage (V_{CC}).

Once the digital power supply voltage (V_{CC}) has been disconnected, the analog power supply (AV_{CC}, AVRH) and the power supply voltage for the high current output buffer pins (DV_{CC}) may be turned on in any sequence.

• Supply voltage stabilization

Rapid fluctuations in the power supply voltage can cause malfunctions even if the Vcc power supply voltage remains within the warranted operating range. It is recommended that the power supply be stabilized such that ripple fluctuations (P-P value) at commercial frequencies (50 Hz/60 Hz) be limited to within 10% of the standard V_{CC} value, and that transient fluctuations due to power supply switching, etc. be limited to a rate of 0.1 V/ms or less.

• Precautions when turning the power on

In order to prevent the built-in step-down circuits from malfunctioning, the time taken for the voltage to rise (0.2 V to 2.7 V) during power-on should be less than 50 μs.

• Handling unused pins

If unused input pins are left open, they may cause malfunctions or latch-up which may lead to permanent damage to the semiconductor. Unused input pins should therefore be pulled up or pulled down through a resistor of at least 2 kΩ.

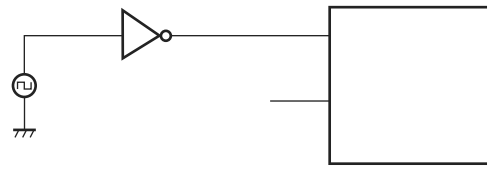
Unused input/output pins may be set to the output state and left open, or set to the input state and connected to a pull-up or pull-down resistance of 2 kΩ or more.

• Handling A/D converter power supply pins

Even if the A/D converter is not used, the power supply pins should be connected such as $AV_{CC} = V_{CC}$, and $AV_{SS} = AVRH = V_{SS}$.

• Notes on using an external clock

Even when an external clock is used, an oscillation stabilization wait time is required following power-on reset or release from sub clock mode or stop mode. Furthermore, only the X0A pin should be driven when an external clock is used, with the X1A pin open as shown in the following diagram. Do not use high-speed oscillation pins (X0 and X1) for external clock input.



Sample external clock connection

- **Handling the power supply for high-current output buffer pins** (DV_{CC}, DV_{SS})

  - **Flash memory products and MASK ROM products (MB90F922NC/F922NCS/922NCS/F923NC/ F923NCS/F924NC/F924NCS)**

    In the Flash memory products and MASK ROM products, the power supply for the high-current output buffer pins (DV_{CC}, DV_{SS}) is isolated from the digital power supply (V_{CC}).
    Therefore, DVcc can therefore be set to a higher voltage than Vcc. If the power supply for the high-current output buffer pins (DV_{CC}, DV_{SS}) is supplied before the digital power supply (V_{CC}), however, care needs to be taken because it is possible that the port 7 or port 8 stepping motor outputs may momentarily output an “H” or “L” level. In order to prevent this, connect the digital power supply (V_{CC}) prior to connecting the power supply for the high-current output buffer pins. Even when the high-current output buffer pins are used as general-purpose ports, power should be supplied to the power supply pins for the high-current output buffer pins (DV_{CC}, DV_{SS}).

  - **Evaluation product** (**MB90V920-101**/**MB90V920-102**)

    In the evaluation products, the power supply for the high-current output buffer pins (DV_{CC}, DV_{SS}) is not isolated from the digital power supply (V_{CC}). Therefore, DV_{CC} must therefore be set to a lower voltage than Vcc. The power supply for the high-current output buffer pins (DV_{CC}, DV_{SS}) must always be applied after the digital power supply (V_{CC}) has been connected, and disconnected before the digital power supply (Vcc) is disconnected (the power supply for the high-current output buffer pins may also be connected and disconnected simultaneously with the digital power supply).
    Even when the high-current output buffer pins are used as general-purpose ports, power should be supplied to the power supply pins for the high-current output buffer pins (DV_{CC}, DV_{SS}).

- **Pull-up/pull-down resistors**

MB90920 series does not support internal pull-up/pull-down resistors. Use external components as necessary.

- **Precautions when not using a sub clock signal**

If the X0A and X1A pins are not connected to an oscillator, apply a pull-down resistance to the X0A pin and leave the X1A pin open.

- **Notes on operating when the external clock is stopped**

The MB90920 series is not guaranteed to operate correctly using the internal oscillator circuit when there is no external oscillator or the external clock input is stopped.

- **Flash memory security function**

A security bit is located within the Flash memory region. The security function is activated by writing the protection code 01_H to the security bit.
Do not write the value 01_H to this address if you are not using the security function.
Please refer to following table for the address of the security bit.

	Flash memory size	Address for security bit
MB90F922NC MB90F922NCS	Built-in 2 Mbits Flash Memory	$FC0001_H$
MB90F923NCS	Built-in 3 Mbits Flash Memory	$F80001_H$
MB90F924NCS	Built-in 4 Mbits Flash Memory	$F80001_H$

- **Serial communication**

In serial communication, reception of wrong data may occur due to noise or other causes. Therefore, design a printed circuit board to prevent noise from occurring. Taking account of the reception of wrong data, detect errors by measures such as adding a checksum to the end of data. If an error is detected, retransmit the data.

- **Characteristic difference between flash device and MASK ROM device**

In the flash device and the MASK ROM device, the electrical characteristic including current consumption, ESD, latch-up, the noise characteristic, and oscillation characteristic, etc. is different according to the difference between the chip layout and the memory structure.

Reconfirm the electrical characteristic when the product is replaced by another product of the same series.

■ CAN CONTROLLERS

The CAN controller has the following features :

- Conforms to CAN Specification Version 2.0 Part A and B
  - Supports transmission/reception in standard frame and extended frame formats
- Supports transmission of data frames by receiving remote frames
- 16 transmission/reception message buffers
  - 29-bit ID and 8-byte data
  - Multi-level message buffer configuration
- Provides full-bit comparison, full-bit mask, acceptance register 0/acceptance register 1 for each message buffer as ID acceptance mask
  - 2 acceptance mask registers in either standard frame format or extended frame formats
- Bit rate programmable from 10 kbps to 2 Mbps (when input clock is at 16 MHz)

(2) Reset input

(V_{CC} = 5.0 V ±10%, V_{SS} = AV_{SS} = 0.0 V, T_A = − 40 °C to +105 °C)

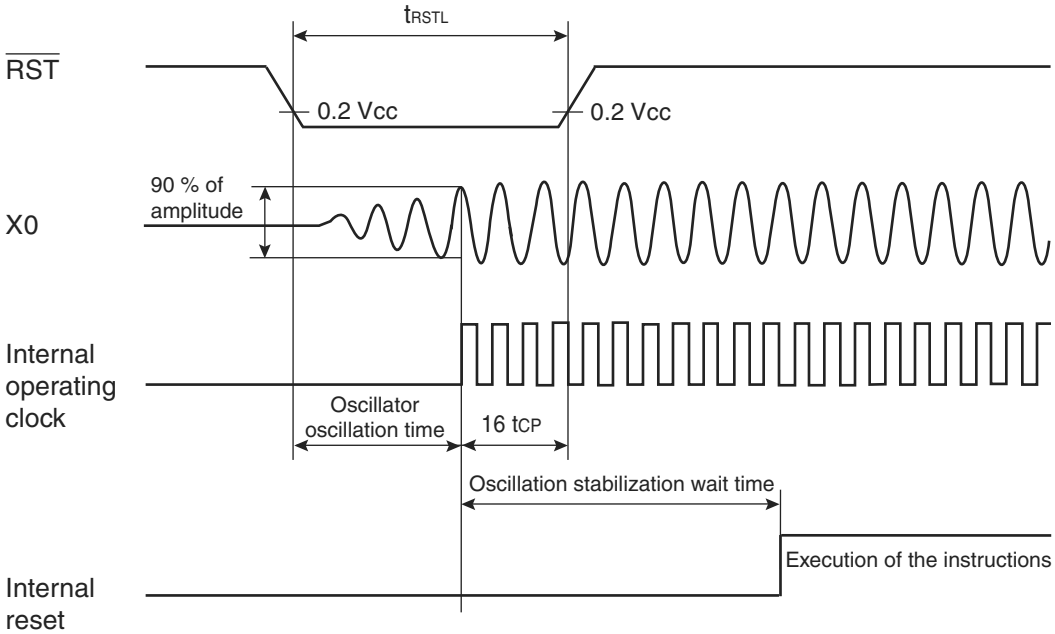
Parameter	Symbol	Pin name	Value		Unit	Remarks
			Min	Max		
Reset input time	t_{RSTL}	$\overline{RST}$	500	—	ns	During normal operation
			Oscillator oscillation time* + 16 t_{CP}	—	ms	In stop mode, sub clock mode, sub sleep mode, and watch mode
			100	—	µs	In time-base timer mode

*: The oscillation time of the oscillator is the time taken to reach 90% of the amplitude. The oscillation time of a crystal oscillator is between several ms and tens of ms. The oscillation time of a ceramic oscillator is between hundreds of µs and several ms. The oscillation time of an external clock is 0 ms.

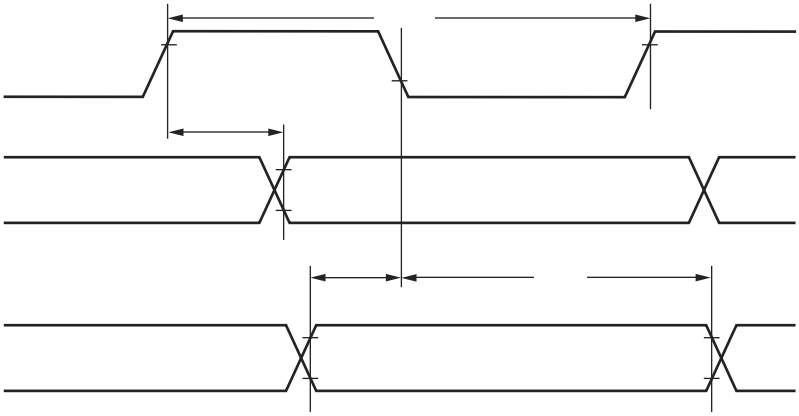
Note : t_{CP} is the internal operating clock cycle time. (Unit : ns)

• During normal operation

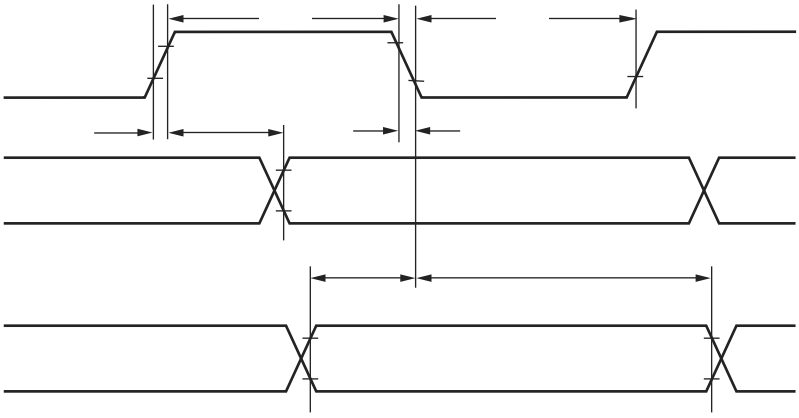
• In stop mode, sub clock mode, sub sleep mode, watch mode, and power-on



- Internal shift clock mode



- External shift clock mode



(5) Timer input timing

(V_{CC} = 5.0 V±10%, V_{SS} = AV_{SS} = 0.0 V, T_A = –40 °C to +105 °C)

Parameter	Symbol	Pin name	Conditions	Value		Unit
				Min	Max	
Input pulse width	t_{TIWH} t_{TIWL}	TIN0, TIN1, IN0 to IN3	—	4 t_{CP}	—	ns

Note : t_{CP} is the internal operating clock cycle time. Refer to " (1) Clock timing".

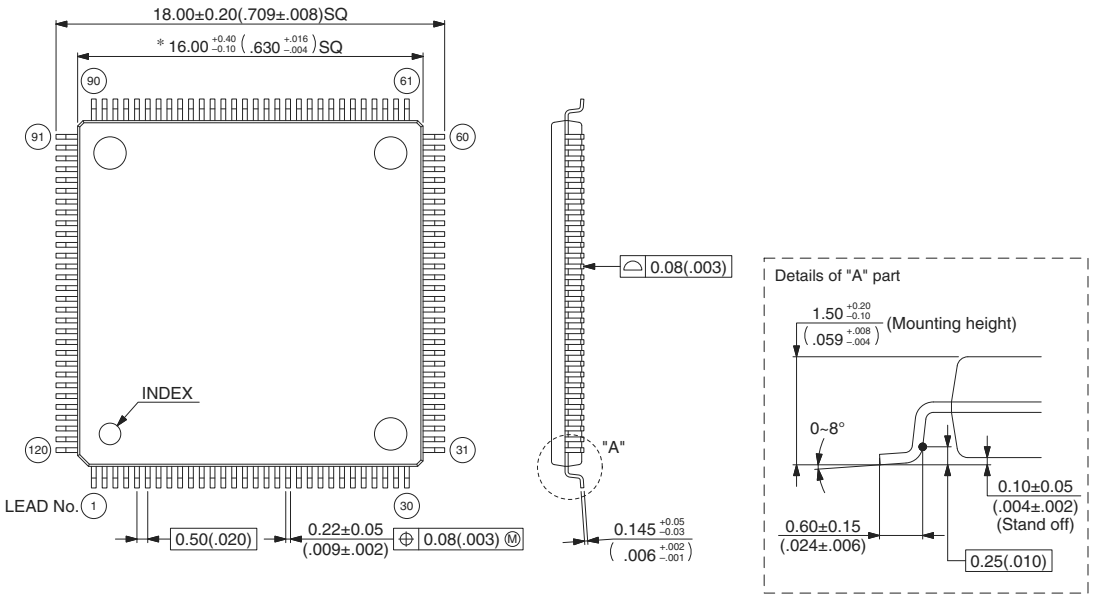
■ PACKAGE DIMENSION

120-pin plastic LQFP		
	Lead pitch	0.50 mm
	Package width × package length	16.0 × 16.0 mm
	Lead shape	Gullwing
	Sealing method	Plastic mold
	Mounting height	1.70 mm MAX
	Weight	0.88 g
(FPT-120P-M21)	Code (Reference)	P-LFQFP120-16×16-0.50

120-pin plastic LQFP
(FPT-120P-M21)

Note 1) * : These dimensions do not include resin protrusion.
Resin protrusion is +0.25(.010) MAX(each side).
Note 2) Pins width and pins thickness include plating thickness.
Note 3) Pins width do not include tie bar cutting remainder.



Dimensions in mm (inches).
Note: The values in parentheses are reference values.
