### **Understanding Embedded - FPGAs (Field Programmable Gate Array)**

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

### **Applications of Embedded - FPGAs**

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

#### **Details**

Product Status	Obsolete
Number of LABs/CLBs	160
Number of Logic Elements/Cells	1280
Total RAM Bits	65536
Number of I/O	104
Number of Gates	-
Voltage - Supply	2.375V ~ 3.465V
Mounting Type	Surface Mount
Operating Temperature	-40°C ~ 100°C (TJ)
Package / Case	132-LFBGA, CSPBGA
Supplier Device Package	132-CSPBGA (8x8)
Purchase URL	<a href="https://www.e-xfl.com/product-detail/lattice-semiconductor/lcmxo2-1200hc-4mg132ir1">https://www.e-xfl.com/product-detail/lattice-semiconductor/lcmxo2-1200hc-4mg132ir1</a>

Data Sheet DS1035

### Architecture Overview

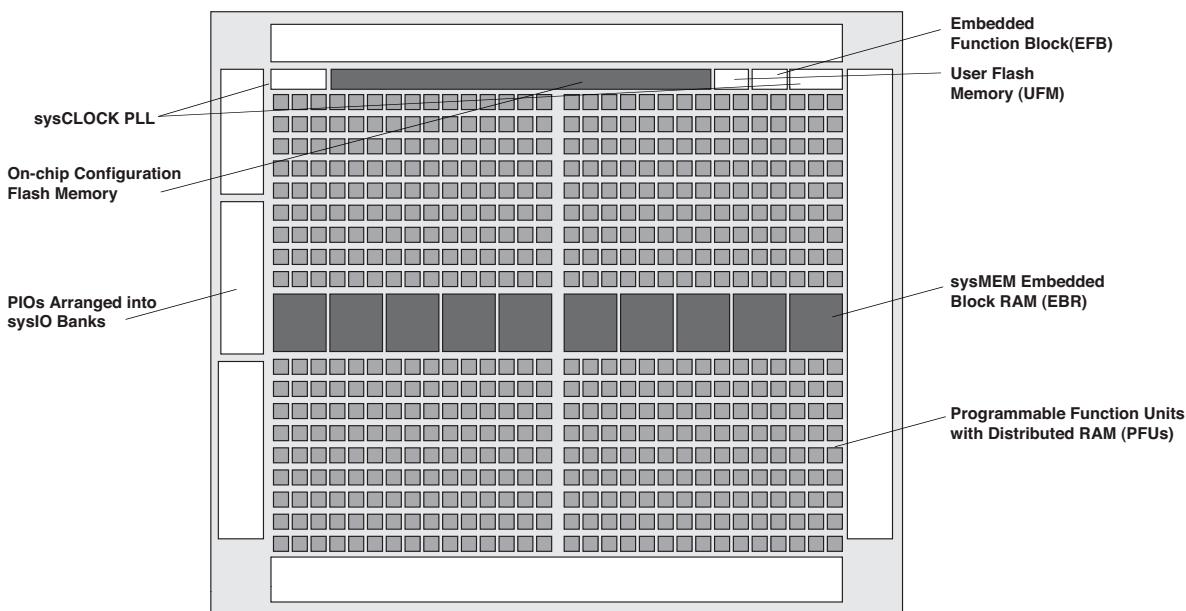

The MachXO2 family architecture contains an array of logic blocks surrounded by Programmable I/O (PIO). The larger logic density devices in this family have sysCLOCK™ PLLs and blocks of sysMEM Embedded Block RAM (EBRs). Figure 2-1 and Figure 2-2 show the block diagrams of the various family members.

**Figure 2-1. Top View of the MachXO2-1200 Device**

Note: MachXO2-256, and MachXO2-640/U are similar to MachXO2-1200. MachXO2-256 has a lower LUT count and no PLL or EBR blocks. MachXO2-640 has no PLL, a lower LUT count and two EBR blocks. MachXO2-640U has a lower LUT count, one PLL and seven EBR blocks.

**Figure 2-2. Top View of the MachXO2-4000 Device**

Note: MachXO2-1200U, MachXO2-2000/U and MachXO2-7000 are similar to MachXO2-4000. MachXO2-1200U and MachXO2-2000 have a lower LUT count, one PLL, and eight EBR blocks. MachXO2-2000U has a lower LUT count, two PLLs, and 10 EBR blocks. MachXO2-7000 has a higher LUT count, two PLLs, and 26 EBR blocks.

**Figure 2-12. MachXO2 Input Register Block Diagram (PIO on Left, Top and Bottom Edges)**

### Right Edge

The input register block on the right edge is a superset of the same block on the top, bottom, and left edges. In addition to the modes described above, the input register block on the right edge also supports DDR memory mode.

In DDR memory mode, two registers are used to sample the data on the positive and negative edges of the modified DQS (DQSR90) in the DDR Memory mode creating two data streams. Before entering the core, these two data streams are synchronized to the system clock to generate two data streams.

The signal DDRCLKPOL controls the polarity of the clock used in the synchronization registers. It ensures adequate timing when data is transferred to the system clock domain from the DQS domain. The DQSR90 and DDRCLKPOL signals are generated in the DQS read-write block.

**Figure 2-13. MachXO2 Input Register Block Diagram (PIO on Right Edge)**

**Table 2-11. I/O Support Device by Device**

	MachXO2-256, MachXO2-640	MachXO2-640U, MachXO2-1200	MachXO2-1200U MachXO2-2000/U, MachXO2-4000, MachXO2-7000
Number of I/O Banks	4	4	6
Type of Input Buffers	Single-ended (all I/O banks) Differential Receivers (all I/O banks)	Single-ended (all I/O banks) Differential Receivers (all I/O banks) Differential input termination (bottom side)	Single-ended (all I/O banks) Differential Receivers (all I/O banks) Differential input termination (bottom side)
Types of Output Buffers	Single-ended buffers with complementary outputs (all I/O banks)	Single-ended buffers with complementary outputs (all I/O banks) Differential buffers with true LVDS outputs (50% on top side)	Single-ended buffers with complementary outputs (all I/O banks) Differential buffers with true LVDS outputs (50% on top side)
Differential Output Emulation Capability	All I/O banks	All I/O banks	All I/O banks
PCI Clamp Support	No	Clamp on bottom side only	Clamp on bottom side only

1. Bottom banks of MachXO2-640U, MachXO2-1200/U and higher density devices only.

2. Reduced functionality. Refer to TN1202, [MachXO2 sysIO Usage Guide](#) for more detail.

3. These interfaces can be emulated with external resistors in all devices.

## Hot Socketing

The MachXO2 devices have been carefully designed to ensure predictable behavior during power-up and power-down. Leakage into I/O pins is controlled to within specified limits. This allows for easy integration with the rest of the system. These capabilities make the MachXO2 ideal for many multiple power supply and hot-swap applications.

## On-chip Oscillator

Every MachXO2 device has an internal CMOS oscillator. The oscillator output can be routed as a clock to the clock tree or as a reference clock to the sysCLOCK PLL using general routing resources. The oscillator frequency can be divided by internal logic. There is a dedicated programming bit and a user input to enable/disable the oscillator. The oscillator frequency ranges from 2.08 MHz to 133 MHz. The software default value of the Master Clock (MCLK) is nominally 2.08 MHz. When a different MCLK is selected during the design process, the following sequence takes place:

1. Device powers up with a nominal MCLK frequency of 2.08 MHz.
2. During configuration, users select a different master clock frequency.
3. The MCLK frequency changes to the selected frequency once the clock configuration bits are received.
4. If the user does not select a master clock frequency, then the configuration bitstream defaults to the MCLK frequency of 2.08 MHz.

Table 2-14 lists all the available MCLK frequencies.

**Table 2-14. Available MCLK Frequencies**

MCLK (MHz, Nominal)	MCLK (MHz, Nominal)	MCLK (MHz, Nominal)
2.08 (default)	9.17	33.25
2.46	10.23	38
3.17	13.3	44.33
4.29	14.78	53.2
5.54	20.46	66.5
7	26.6	88.67
8.31	29.56	133

## Embedded Hardened IP Functions and User Flash Memory

All MachXO2 devices provide embedded hardened functions such as SPI, I<sup>2</sup>C and Timer/Counter. MachXO2-640/U and higher density devices also provide User Flash Memory (UFM). These embedded blocks interface through the WISHBONE interface with routing as shown in Figure 2-20.

For more details on these embedded functions, please refer to TN1205, [Using User Flash Memory and Hardened Control Functions in MachXO2 Devices](#).

## User Flash Memory (UFM)

MachXO2-640/U and higher density devices provide a User Flash Memory block, which can be used for a variety of applications including storing a portion of the configuration image, initializing EBRs, to store PROM data or, as a general purpose user Flash memory. The UFM block connects to the device core through the embedded function block WISHBONE interface. Users can also access the UFM block through the JTAG, I<sup>2</sup>C and SPI interfaces of the device. The UFM block offers the following features:

- Non-volatile storage up to 256 kbits
- 100K write cycles
- Write access is performed page-wise; each page has 128 bits (16 bytes)
- Auto-increment addressing
- WISHBONE interface

For more information on the UFM, please refer to TN1205, [Using User Flash Memory and Hardened Control Functions in MachXO2 Devices](#).

## Standby Mode and Power Saving Options

MachXO2 devices are available in three options for maximum flexibility: ZE, HC and HE devices. The ZE devices have ultra low static and dynamic power consumption. These devices use a 1.2 V core voltage that further reduces power consumption. The HC and HE devices are designed to provide high performance. The HC devices have a built-in voltage regulator to allow for 2.5 V V<sub>CC</sub> and 3.3 V V<sub>CC</sub> while the HE devices operate at 1.2 V V<sub>CC</sub>.

MachXO2 devices have been designed with features that allow users to meet the static and dynamic power requirements of their applications by controlling various device subsystems such as the bandgap, power-on-reset circuitry, I/O bank controllers, power guard, on-chip oscillator, PLLs, etc. In order to maximize power savings, MachXO2 devices support an ultra low power Stand-by mode. While most of these features are available in all three device types, these features are mainly intended for use with MachXO2 ZE devices to manage power consumption.

In the stand-by mode the MachXO2 devices are powered on and configured. Internal logic, I/Os and memories are switched on and remain operational, as the user logic waits for an external input. The device enters this mode when the standby input of the standby controller is toggled or when an appropriate I<sup>2</sup>C or JTAG instruction is issued by an external master. Various subsystems in the device such as the band gap, power-on-reset circuitry etc can be configured such that they are automatically turned “off” or go into a low power consumption state to save power when the device enters this state. Note that the MachXO2 devices are powered on when in standby mode and all power supplies should remain in the Recommended Operating Conditions.

## Configuration and Testing

This section describes the configuration and testing features of the MachXO2 family.

### IEEE 1149.1-Compliant Boundary Scan Testability

All MachXO2 devices have boundary scan cells that are accessed through an IEEE 1149.1 compliant test access port (TAP). This allows functional testing of the circuit board, on which the device is mounted, through a serial scan path that can access all critical logic nodes. Internal registers are linked internally, allowing test data to be shifted in and loaded directly onto test nodes, or test data to be captured and shifted out for verification. The test access port consists of dedicated I/Os: TDI, TDO, TCK and TMS. The test access port shares its power supply with V<sub>CCIO</sub> Bank 0 and can operate with LVC MOS3.3, 2.5, 1.8, 1.5, and 1.2 standards.

For more details on boundary scan test, see AN8066, [Boundary Scan Testability with Lattice sysIO Capability](#) and TN1087, [Minimizing System Interruption During Configuration Using TransFR Technology](#).

### Device Configuration

All MachXO2 devices contain two ports that can be used for device configuration. The Test Access Port (TAP), which supports bit-wide configuration and the sysCONFIG port which supports serial configuration through I<sup>2</sup>C or SPI. The TAP supports both the IEEE Standard 1149.1 Boundary Scan specification and the IEEE Standard 1532 In-System Configuration specification. There are various ways to configure a MachXO2 device:

1. Internal Flash Download
2. JTAG
3. Standard Serial Peripheral Interface (Master SPI mode) – interface to boot PROM memory
4. System microprocessor to drive a serial slave SPI port (SSPI mode)
5. Standard I<sup>2</sup>C Interface to system microprocessor

Upon power-up, the configuration SRAM is ready to be configured using the selected sysCONFIG port. Once a configuration port is selected, it will remain active throughout that configuration cycle. The IEEE 1149.1 port can be activated any time after power-up by sending the appropriate command through the TAP port. Optionally the device can run a CRC check upon entering the user mode. This will ensure that the device was configured correctly.

The sysCONFIG port has 10 dual-function pins which can be used as general purpose I/Os if they are not required for configuration. See TN1204, [MachXO2 Programming and Configuration Usage Guide](#) for more information about using the dual-use pins as general purpose I/Os.

Lattice design software uses proprietary compression technology to compress bit-streams for use in MachXO2 devices. Use of this technology allows Lattice to provide a lower cost solution. In the unlikely event that this technology is unable to compress bitstreams to fit into the amount of on-chip Flash memory, there are a variety of techniques that can be utilized to allow the bitstream to fit in the on-chip Flash memory. For more details, refer to TN1204, [MachXO2 Programming and Configuration Usage Guide](#).

The Test Access Port (TAP) has five dual purpose pins (TDI, TDO, TMS, TCK and JTAGENB). These pins are dual function pins - TDI, TDO, TMS and TCK can be used as general purpose I/O if desired. For more details, refer to TN1204, [MachXO2 Programming and Configuration Usage Guide](#).

### TransFR (Transparent Field Reconfiguration)

TransFR is a unique Lattice technology that allows users to update their logic in the field without interrupting system operation using a simple push-button solution. For more details refer to TN1087, [Minimizing System Interruption During Configuration Using TransFR Technology](#) for details.

## Power-On-Reset Voltage Levels<sup>1, 2, 3, 4, 5</sup>

Symbol	Parameter	Min.	Typ.	Max.	Units
$V_{PORUP}$	Power-On-Reset ramp up trip point (band gap based circuit monitoring $V_{CCINT}$ and $V_{CCIO0}$ )	0.9	—	1.06	V
$V_{PORUPEXT}$	Power-On-Reset ramp up trip point (band gap based circuit monitoring external $V_{CC}$ power supply)	1.5	—	2.1	V
$V_{PORDNBG}$	Power-On-Reset ramp down trip point (band gap based circuit monitoring $V_{CCINT}$ )	0.75	—	0.93	V
$V_{PORDNBGEXT}$	Power-On-Reset ramp down trip point (band gap based circuit monitoring $V_{CC}$ )	0.98	—	1.33	V
$V_{PORDNSRAM}$	Power-On-Reset ramp down trip point (SRAM based circuit monitoring $V_{CCINT}$ )	—	0.6	—	V
$V_{PORDNSRAMEXT}$	Power-On-Reset ramp down trip point (SRAM based circuit monitoring $V_{CC}$ )	—	0.96	—	V

1. These POR trip points are only provided for guidance. Device operation is only characterized for power supply voltages specified under recommended operating conditions.
2. For devices without voltage regulators  $V_{CCINT}$  is the same as the  $V_{CC}$  supply voltage. For devices with voltage regulators,  $V_{CCINT}$  is regulated from the  $V_{CC}$  supply voltage.
3. Note that  $V_{PORUP}$  (min.) and  $V_{PORDNBG}$  (max.) are in different process corners. For any given process corner  $V_{PORDNBG}$  (max.) is always 12.0 mV below  $V_{PORUP}$  (min.).
4.  $V_{PORUPEXT}$  is for HC devices only. In these devices a separate POR circuit monitors the external  $V_{CC}$  power supply.
5.  $V_{CCIO0}$  does not have a Power-On-Reset ramp down trip point.  $V_{CCIO0}$  must remain within the Recommended Operating Conditions to ensure proper operation.

## Programming/Erase Specifications

Symbol	Parameter	Min.	Max. <sup>1</sup>	Units
$N_{PROGCYC}$	Flash Programming cycles per $t_{RETENTION}$	—	10,000	Cycles
	Flash functional programming cycles	—	100,000	
$t_{RETENTION}$	Data retention at 100 °C junction temperature	10	—	Years
	Data retention at 85 °C junction temperature	20	—	

1. Maximum Flash memory reads are limited to 7.5E13 cycles over the lifetime of the product.

## Hot Socketing Specifications<sup>1, 2, 3</sup>

Symbol	Parameter	Condition	Max.	Units
$I_{DK}$	Input or I/O leakage Current	$0 < V_{IN} < V_{IH}$ (MAX)	+/-1000	µA

1. Insensitive to sequence of  $V_{CC}$  and  $V_{CCIO}$ . However, assumes monotonic rise/fall rates for  $V_{CC}$  and  $V_{CCIO}$ .
2.  $0 < V_{CC} < V_{CC}$  (MAX),  $0 < V_{CCIO} < V_{CCIO}$  (MAX).
3.  $I_{DK}$  is additive to  $I_{PU}$ ,  $I_{PD}$  or  $I_{BH}$ .

## ESD Performance

Please refer to the [MachXO2 Product Family Qualification Summary](#) for complete qualification data, including ESD performance.

## sysIO Recommended Operating Conditions

1. This part number has a tape and reel quantity of 5,000 units with a minimum order quantity of 10,000 units. Order quantities must be in increments of 5,000 units. For example, a 10,000 unit order will be shipped in two reels with one reel containing 5,000 units and the other reel with less than 5,000 units (depending on test yields). Unserviced backlog will be canceled.
2. This part number has a tape and reel quantity of 1,000 units with a minimum order quantity of 1,000. Order quantities must be in increments of 1,000 units. For example, a 5,000 unit order will be shipped as 5 reels of 1000 units each.
3. This part number has a tape and reel quantity of 50 units with a minimum order quantity of 50. Order quantities must be in increments of 50 units. For example, a 1,000 unit order will be shipped as 20 reels of 50 units each.

LCMXO2-7000HE-5TG144I	6864	1.2 V	-5	Halogen-Free TQFP	144	IND
LCMXO2-7000HE-6TG144I	6864	1.2 V	-6	Halogen-Free TQFP	144	IND
LCMXO2-7000HE-4BG256I	6864	1.2 V	-4	Halogen-Free caBGA	256	IND
LCMXO2-7000HE-5BG256I	6864	1.2 V	-5	Halogen-Free caBGA	256	IND
LCMXO2-7000HE-6BG256I	6864	1.2 V	-6	Halogen-Free caBGA	256	IND
LCMXO2-7000HE-4FTG256I	6864	1.2 V	-4	Halogen-Free ftBGA	256	IND
LCMXO2-7000HE-5FTG256I	6864	1.2 V	-5	Halogen-Free ftBGA	256	IND
LCMXO2-7000HE-6FTG256I	6864	1.2 V	-6	Halogen-Free ftBGA	256	IND
LCMXO2-7000HE-4BG332I	6864	1.2 V	-4	Halogen-Free caBGA	332	IND
LCMXO2-7000HE-5BG332I	6864	1.2 V	-5	Halogen-Free caBGA	332	IND
LCMXO2-7000HE-6BG332I	6864	1.2 V	-6	Halogen-Free caBGA	332	IND
LCMXO2-7000HE-4FG484I	6864	1.2 V	-4	Halogen-Free fpBGA	484	IND
LCMXO2-7000HE-5FG484I	6864	1.2 V	-5	Halogen-Free fpBGA	484	IND
LCMXO2-7000HE-6FG484I	6864	1.2 V	-6	Halogen-Free fpBGA	484	IND

## R1 Device Specifications

The LCMXO2-1200ZE/HC “R1” devices have the same specifications as their Standard (non-R1) counterparts except as listed below. For more details on the R1 to Standard migration refer to AN8086, [Designing for Migration from MachXO2-1200-R1 to Standard Non-R1 Devices](#).

- The User Flash Memory (UFM) cannot be programmed through the internal WISHBONE interface. It can still be programmed through the JTAG/SPI/I<sup>2</sup>C ports.
- The on-chip differential input termination resistor value is higher than intended. It is approximately 200Ω as opposed to the intended 100Ω. It is recommended to use external termination resistors for differential inputs. The on-chip termination resistors can be disabled through Lattice design software.
- Soft Error Detection logic may not produce the correct result when it is run for the first time after configuration. To use this feature, discard the result from the first operation. Subsequent operations will produce the correct result.
- Under certain conditions, I<sub>ILH</sub> exceeds data sheet specifications. The following table provides more details:

Condition	Clamp	Pad Rising I <sub>ILH</sub> Max.	Pad Falling I <sub>ILH</sub> Min.	Steady State Pad High I <sub>ILH</sub>	Steady State Pad Low I <sub>ILH</sub>
VPAD > VCCIO	OFF	1 mA	-1 mA	1 mA	10 μA
VPAD = VCCIO	ON	10 μA	-10 μA	10 μA	10 μA
VPAD = VCCIO	OFF	1 mA	-1 mA	1 mA	10 μA
VPAD < VCCIO	OFF	10 μA	-10 μA	10 μA	10 μA

- The user SPI interface does not operate correctly in some situations. During master read access and slave write access, the last byte received does not generate the RRDY interrupt.
- In GDDRX2, GDDRX4 and GDDR71 modes, ECLKSYNC may have a glitch in the output under certain conditions, leading to possible loss of synchronization.
- When using the hard I<sup>2</sup>C IP core, the I<sup>2</sup>C status registers I<sub>2</sub>C\_1\_SR and I<sub>2</sub>C\_2\_SR may not update correctly.
- PLL Lock signal will glitch high when coming out of standby. This glitch lasts for about 10 μsec before returning low.
- Dual boot only available on HC devices, requires tying VCC and VCCIO2 to the same 3.3 V or 2.5 V supply.

# MachXO2 Family Data Sheet

## Revision History

March 2017

Data Sheet DS1035

Date	Version	Section	Change Summary
March 2017	3.3	DC and Switching Characteristics	Updated the <a href="#">Absolute Maximum Ratings</a> section. Added standards.
			Updated the <a href="#">sysIO Recommended Operating Conditions</a> section. Added standards.
			Updated the <a href="#">sysIO Single-Ended DC Electrical Characteristics</a> section. Added standards.
			Updated the <a href="#">MachXO2 External Switching Characteristics – HC/HE Devices</a> section. Under 7:1 LVDS Outputs – GDDR71_TX.ECLK.7:1, the D <sub>V<sub>B</sub></sub> and the D <sub>V<sub>A</sub></sub> parameters were changed to D <sub>I<sub>B</sub></sub> and D <sub>I<sub>A</sub></sub> . The parameter descriptions were also modified.
			Updated the <a href="#">MachXO2 External Switching Characteristics – ZE Devices</a> section. Under 7:1 LVDS Outputs – GDDR71_TX.ECLK.7:1, the D <sub>V<sub>B</sub></sub> and the D <sub>V<sub>A</sub></sub> parameters were changed to D <sub>I<sub>B</sub></sub> and D <sub>I<sub>A</sub></sub> . The parameter descriptions were also modified.
		Pinout Information	Updated the <a href="#">Signal Descriptions</a> section. Revised the descriptions of the PROGRAMN, INITN, and DONE signals.
			Updated the <a href="#">Pinout Information Summary</a> section. Added footnote to MachXO2-1200 32 QFN.
	3.3	Ordering Information	Updated the <a href="#">MachXO2 Part Number Description</a> section. Corrected the MG184, BG256, FTG256 package information. Added "(0.8 mm Pitch)" to BG332.
			Updated the <a href="#">Ultra Low Power Industrial Grade Devices, Halogen Free (RoHS) Packaging</a> section. — Updated LCMXO2-1200ZE-1UWG25ITR50 footnote. — Corrected footnote numbering typo. — Added the LCMXO2-2000ZE-1UWG49ITR50 and LCMXO2-2000ZE-1UWG49ITR1K part numbers. Updated/added footnote/s.

Date	Version	Section	Change Summary
May 2016	3.2	All	Moved designation for 84 QFN package information from 'Advanced' to 'Final'.
		Introduction	Updated the Features section. Revised Table 1-1, MachXO2 Family Selection Guide. — Added 'Advanced' 48 QFN package. — Revised footnote 6. — Added footnote 9.
		DC and Switching Characteristics	Updated the MachXO2 External Switching Characteristics – HC/HE Devices section. Added footnote 12. Updated the MachXO2 External Switching Characteristics – ZE Devices section. Added footnote 12.
		Pinout Information	Updated the Signal Descriptions section. Added information on GND signal. Updated the Pinout Information Summary section. — Added 'Advanced' MachXO2-256 48 QFN values. — Added 'Advanced' MachXO2-640 48 QFN values. — Added footnote to GND. — Added footnotes 2 and 3.
		Ordering Information	Updated the MachXO2 Part Number Description section. Added 'Advanced' SG48 package and revised footnote. Updated the Ordering Information section. — Added part numbers for 'Advanced' QFN 48 package.
March 2016	3.1	Introduction	Updated the Features section. Revised Table 1-1, MachXO2 Family Selection Guide. — Added 32 QFN value for XO2-1200. — Added 84 QFN (7 mm x 7 mm, 0.5 mm) package. — Modified package name to 100-pin TQFP. — Modified package name to 144-pin TQFP. — Added footnote.
		Architecture	Updated the Typical I/O Behavior During Power-up section. Removed reference to TN1202.
		DC and Switching Characteristics	Updated the sysCONFIG Port Timing Specifications section. Revised $t_{DPPDONE}$ and $t_{DPPINIT}$ Max. values per PCN 03A-16, released March 2016.
		Pinout Information	Updated the Pinout Information Summary section. — Added MachXO2-1200 32 QFN values. — Added 'Advanced' MachXO2-4000 84 QFN values.
		Ordering Information	Updated the MachXO2 Part Number Description section. Added 'Advanced' QN84 package and footnote. Updated the Ordering Information section. — Added part numbers for 1280 LUTs QFN 32 package. — Added part numbers for 4320 LUTs QFN 84 package.
March 2015	3.0	Introduction	Updated the Features section. Revised Table 1-1, MachXO2 Family Selection Guide. — Changed 64-ball ucBGA dimension.
		Architecture	Updated the Device Configuration section. Added JTAGENB to TAP dual purpose pins.
