Lattice Semiconductor Corporation - LCMXO2-2000HE-4TG144C Datasheet

Welcome to E-XFL.COM

Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

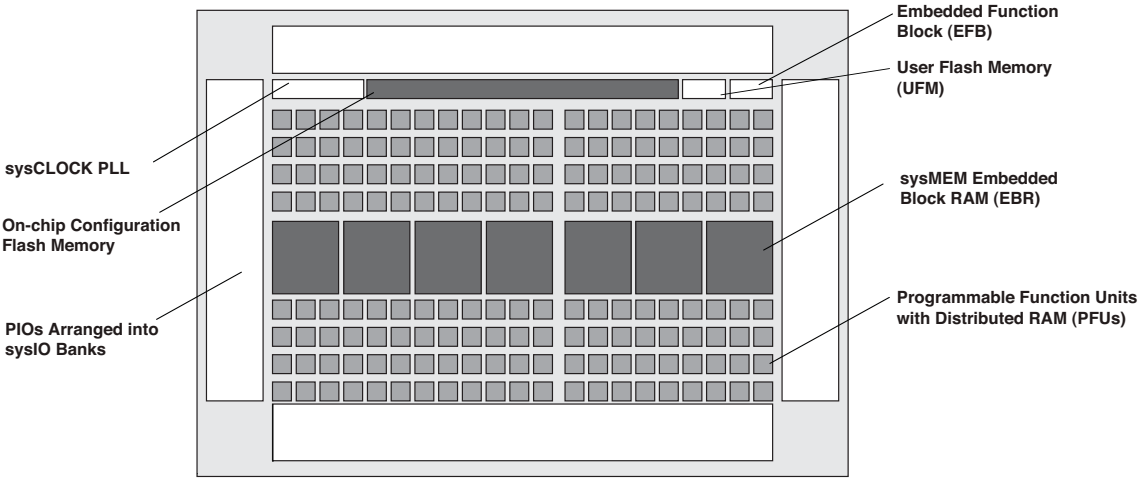
Details	
Product Status	Active
Number of LABs/CLBs	264
Number of Logic Elements/Cells	2112
Total RAM Bits	75776
Number of I/O	111
Number of Gates	-
Voltage - Supply	1.14V ~ 1.26V
Mounting Type	Surface Mount
Operating Temperature	0°C ~ 85°C (TJ)
Package / Case	144-LQFP
Supplier Device Package	144-TQFP (20x20)
Purchase URL	https://www.e-xfl.com/product-detail/lattice-semiconductor/lcmxo2-2000he-4tg144c

MachXO2 Family Data Sheet Architecture

Architecture Overview

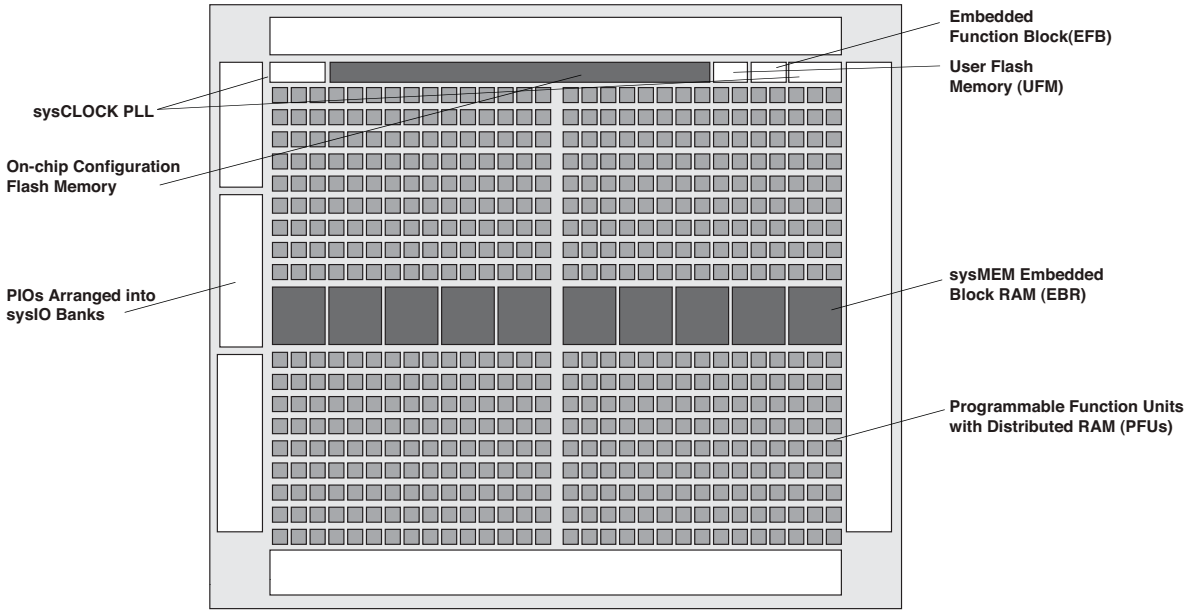
The MachXO2 family architecture contains an array of logic blocks surrounded by Programmable I/O (PIO). The larger logic density devices in this family have sysCLOCK™ PLLs and blocks of sysMEM Embedded Block RAM (EBRs). Figure 2-1 and Figure 2-2 show the block diagrams of the various family members.

Figure 2-1. Top View of the MachXO2-1200 Device



Note: MachXO2-256, and MachXO2-640/U are similar to MachXO2-1200. MachXO2-256 has a lower LUT count and no PLL or EBR blocks. MachXO2-640 has no PLL, a lower LUT count and two EBR blocks. MachXO2-640U has a lower LUT count, one PLL and seven EBR blocks.

Figure 2-2. Top View of the MachXO2-4000 Device



Note: MachXO2-1200U, MachXO2-2000/U and MachXO2-7000 are similar to MachXO2-4000. MachXO2-1200U and MachXO2-2000 have a lower LUT count, one PLL, and eight EBR blocks. MachXO2-2000U has a lower LUT count, two PLLs, and 10 EBR blocks. MachXO2-7000 has a higher LUT count, two PLLs, and 26 EBR blocks.

This phase shift can be either programmed during configuration or can be adjusted dynamically. In dynamic mode, the PLL may lose lock after a phase adjustment on the output used as the feedback source and not relock until the t_{LOCK} parameter has been satisfied.

The MachXO2 also has a feature that allows the user to select between two different reference clock sources dynamically. This feature is implemented using the PLLREFCS primitive. The timing parameters for the PLL are shown in the sysCLOCK PLL Timing table.

The MachXO2 PLL contains a WISHBONE port feature that allows the PLL settings, including divider values, to be dynamically changed from the user logic. When using this feature the EFB block must also be instantiated in the design to allow access to the WISHBONE ports. Similar to the dynamic phase adjustment, when PLL settings are updated through the WISHBONE port the PLL may lose lock and not relock until the t_{LOCK} parameter has been satisfied. The timing parameters for the PLL are shown in the sysCLOCK PLL Timing table.

For more details on the PLL and the WISHBONE interface, see TN1199, MachXO2 sysCLOCK PLL Design and Usage Guide.

Figure 2-7. PLL Diagram

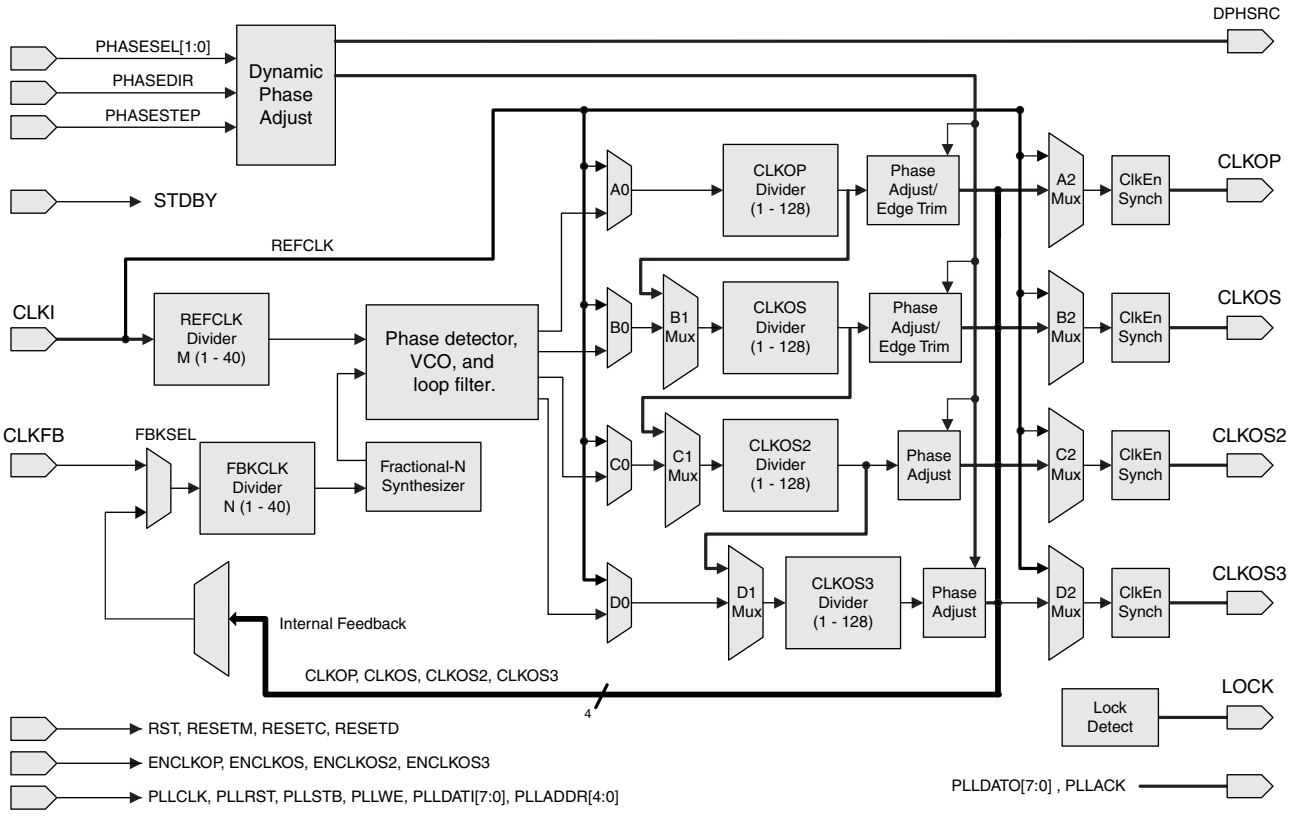

Table 2-4 provides signal descriptions of the PLL block.

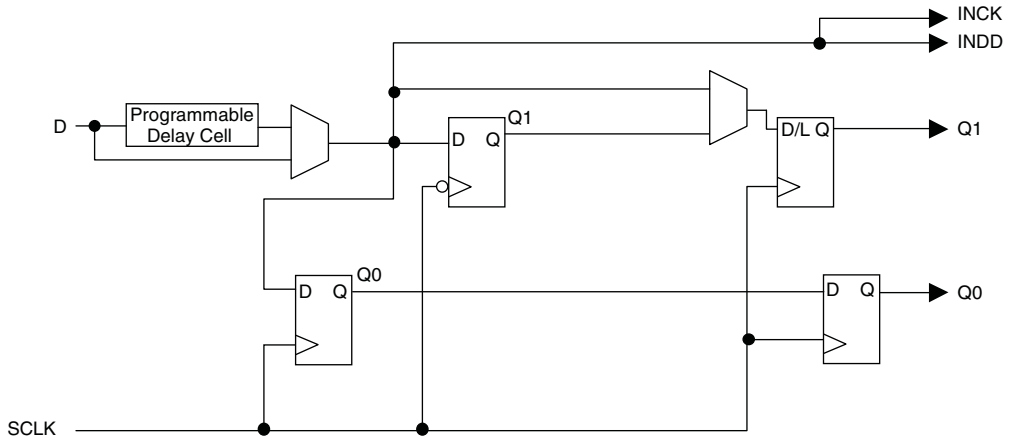
Table 2-4. PLL Signal Descriptions

Port Name	I/O	Description
CLKI	I	Input clock to PLL
CLKFB	I	Feedback clock
PHASESEL[1:0]	I	Select which output is affected by Dynamic Phase adjustment ports
PHASEDIR	I	Dynamic Phase adjustment direction
PHASESTEP	I	Dynamic Phase step – toggle shifts VCO phase adjust by one step.

Figure 2-12. MachXO2 Input Register Block Diagram (PIO on Left, Top and Bottom Edges)



Right Edge

The input register block on the right edge is a superset of the same block on the top, bottom, and left edges. In addition to the modes described above, the input register block on the right edge also supports DDR memory mode.

In DDR memory mode, two registers are used to sample the data on the positive and negative edges of the modified DQS (DQSR90) in the DDR Memory mode creating two data streams. Before entering the core, these two data streams are synchronized to the system clock to generate two data streams.

The signal DDRCLKPOL controls the polarity of the clock used in the synchronization registers. It ensures adequate timing when data is transferred to the system clock domain from the DQS domain. The DQSR90 and DDRCLKPOL signals are generated in the DQS read-write block.

Figure 2-13. MachXO2 Input Register Block Diagram (PIO on Right Edge)

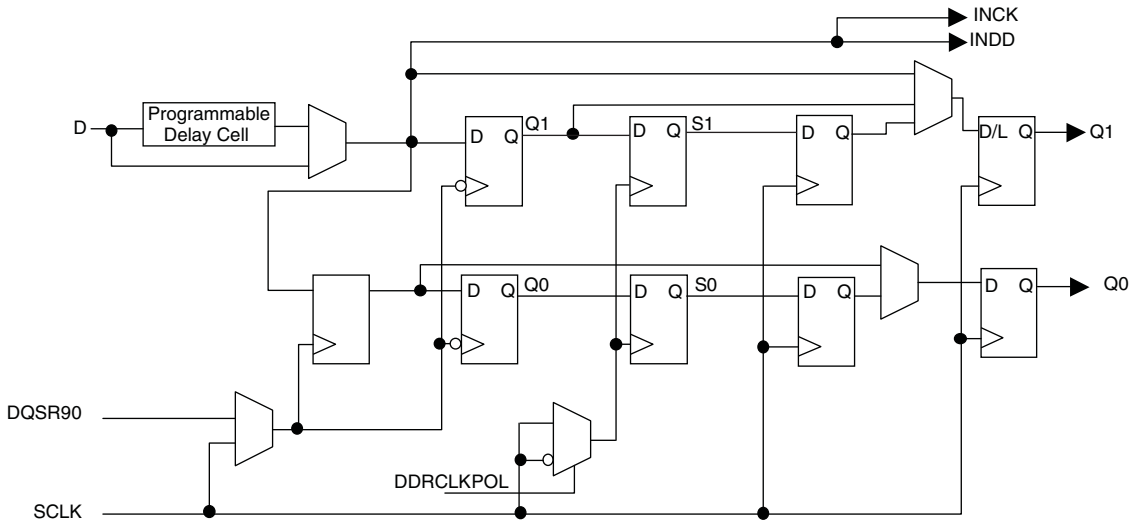


Figure 2-15. MachXO2 Output Register Block Diagram (PIO on the Right Edges)

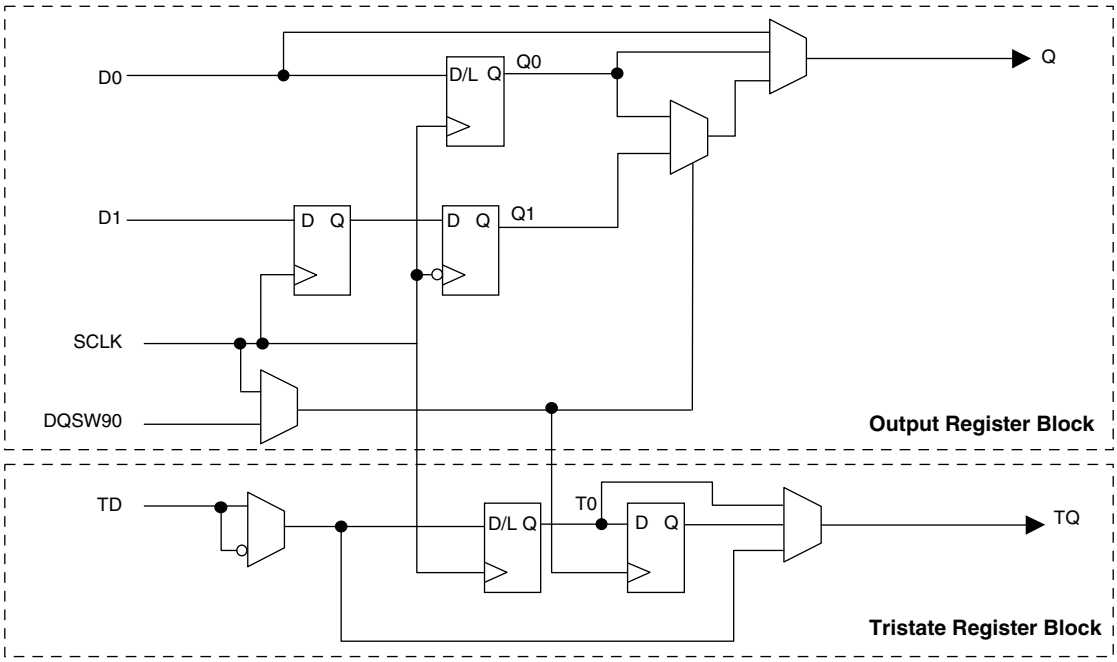


Tri-state Register Block

The tri-state register block registers tri-state control signals from the core of the device before they are passed to the sysIO buffers. The block contains a register for SDR operation. In SDR, TD input feeds one of the flip-flops that then feeds the output.

The tri-state register blocks on the right edge contain an additional register for DDR memory operation. In DDR memory mode, the register TS input is fed into another register that is clocked using the DQSW90 signal. The output of this register is used as a tri-state control.

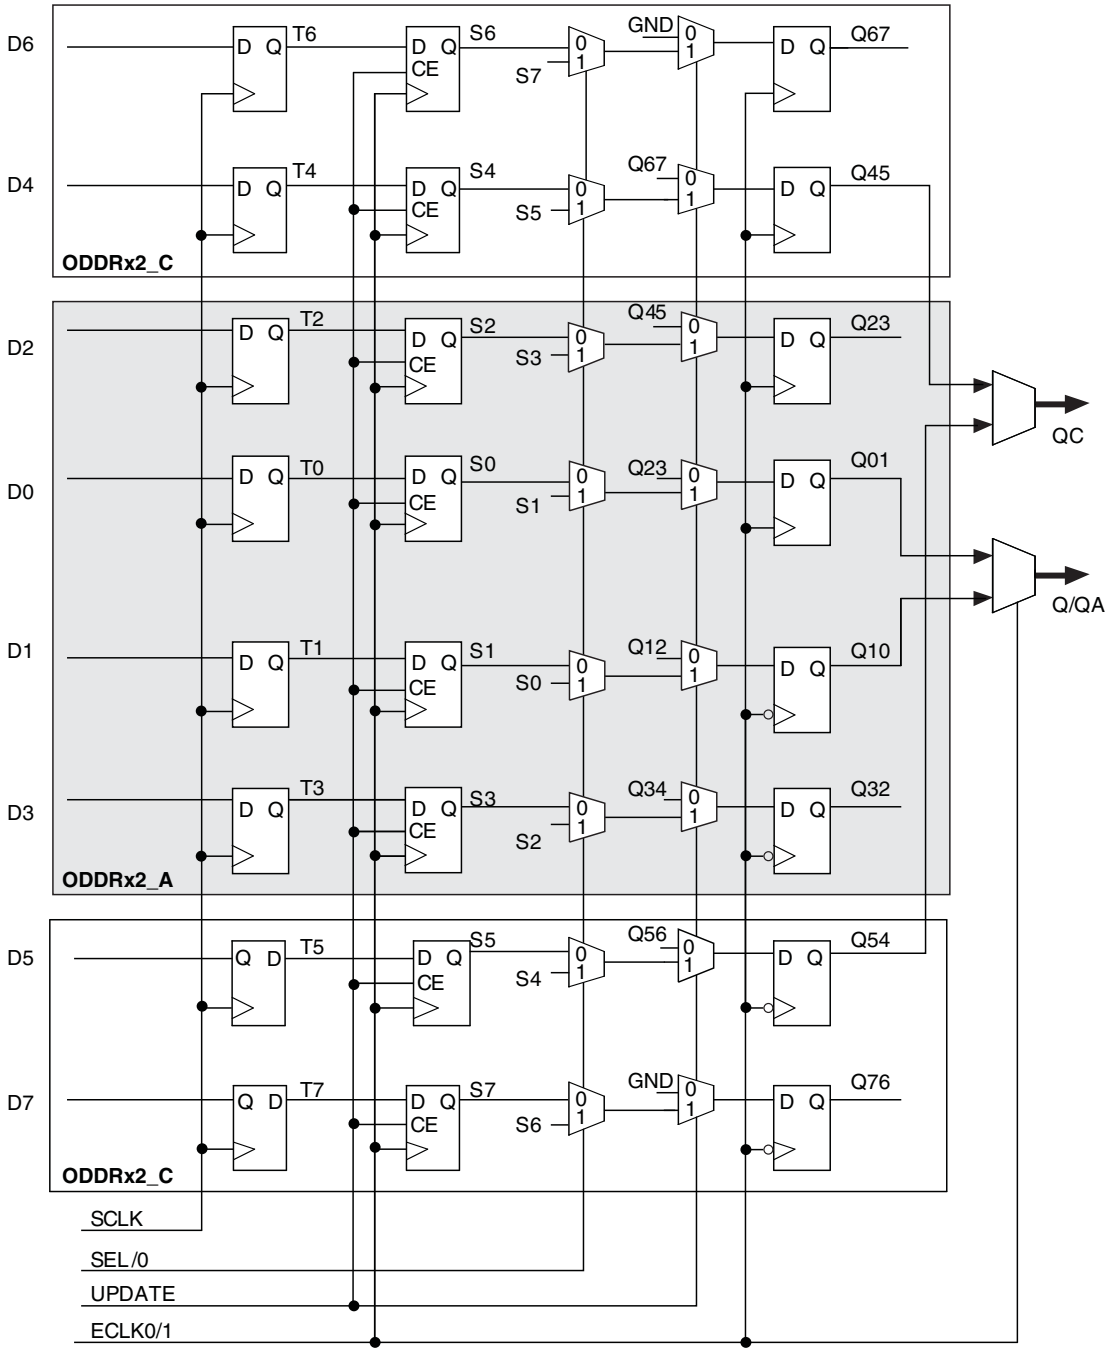
Input Gearbox

Each PIC on the bottom edge has a built-in 1:8 input gearbox. Each of these input gearboxes may be programmed as a 1:7 de-serializer or as one IDDRX4 (1:8) gearbox or as two IDDRX2 (1:4) gearboxes. Table 2-9 shows the gearbox signals.

Table 2-9. Input Gearbox Signal List

Name	I/O Type	Description
D	Input	High-speed data input after programmable delay in PIO A input register block
ALIGNWD	Input	Data alignment signal from device core
SCLK	Input	Slow-speed system clock
ECLK[1:0]	Input	High-speed edge clock
RST	Input	Reset
Q[7:0]	Output	Low-speed data to device core: Video RX(1:7): Q[6:0] GDDRX4(1:8): Q[7:0] GDDRX2(1:4)(IOL-A): Q4, Q5, Q6, Q7 GDDRX2(1:4)(IOL-C): Q0, Q1, Q2, Q3

Figure 2-17. Output Gearbox



More information on the output gearbox is available in TN1203, Implementing High-Speed Interfaces with MachXO2 Devices.

DDR Memory Support

Certain PICs on the right edge of MachXO2-640U, MachXO2-1200/U and larger devices, have additional circuitry to allow the implementation of DDR memory interfaces. There are two groups of 14 or 12 PIOs each on the right edge with additional circuitry to implement DDR memory interfaces. This capability allows the implementation of up to 16-bit wide memory interfaces. One PIO from each group contains a control element, the DQS Read/Write Block, to facilitate the generation of clock and control signals (DQSR90, DQSW90, DDRCLKPOL and DATAVALID). These clock and control signals are distributed to the other PIO in the group through dedicated low skew routing.

DQS Read Write Block

Source synchronous interfaces generally require the input clock to be adjusted in order to correctly capture data at the input register. For most interfaces a PLL is used for this adjustment. However, in DDR memories the clock (referred to as DQS) is not free-running so this approach cannot be used. The DQS Read Write block provides the required clock alignment for DDR memory interfaces. DQSR90 and DQSW90 signals are generated by the DQS Read Write block from the DQS input.

In a typical DDR memory interface design, the phase relationship between the incoming delayed DQS strobe and the internal system clock (during the read cycle) is unknown. The MachXO2 family contains dedicated circuits to transfer data between these domains. To prevent set-up and hold violations, at the domain transfer between DQS (delayed) and the system clock, a clock polarity selector is used. This circuit changes the edge on which the data is registered in the synchronizing registers in the input register block. This requires evaluation at the start of each read cycle for the correct clock polarity. Prior to the read operation in DDR memories, DQS is in tri-state (pulled by termination). The DDR memory device drives DQS low at the start of the preamble state. A dedicated circuit in the DQS Read Write block detects the first DQS rising edge after the preamble state and generates the DDRCLKPOL signal. This signal is used to control the polarity of the clock to the synchronizing registers.

The temperature, voltage and process variations of the DQS delay block are compensated by a set of calibration signals (6-bit bus) from a DLL on the right edge of the device. The DLL loop is compensated for temperature, voltage and process variations by the system clock and feedback loop.

sysIO Buffer

Each I/O is associated with a flexible buffer referred to as a sysIO buffer. These buffers are arranged around the periphery of the device in groups referred to as banks. The sysIO buffers allow users to implement a wide variety of standards that are found in today's systems including LVCMOS, TTL, PCI, SSTL, HSTL, LVDS, BLVDS, MLVDS and LVPECL.

Each bank is capable of supporting multiple I/O standards. In the MachXO2 devices, single-ended output buffers, ratioed input buffers (LVTTL, LVCMOS and PCI), differential (LVDS) and referenced input buffers (SSTL and HSTL) are powered using I/O supply voltage (V_{CCIO}). Each sysIO bank has its own V_{CCIO}. In addition, each bank has a voltage reference, V_{REF}, which allows the use of referenced input buffers independent of the bank V_{CCIO}.

MachXO2-256 and MachXO2-640 devices contain single-ended ratioed input buffers and single-ended output buffers with complementary outputs on all the I/O banks. Note that the single-ended input buffers on these devices do not contain PCI clamps. In addition to the single-ended I/O buffers these two devices also have differential and referenced input buffers on all I/Os. The I/Os are arranged in pairs, the two pads in the pair are described as "T" and "C", where the true pad is associated with the positive side of the differential input buffer and the comp (complementary) pad is associated with the negative side of the differential input buffer.

Programming and Erase Flash Supply Current – ZE Devices[1, 2, 3, 4]

Symbol	Parameter	Device	Typ.[5]	Units
I_{CC}	Core Power Supply	LCMXO2-256ZE	13	mA
		LCMXO2-640ZE	14	mA
		LCMXO2-1200ZE	15	mA
		LCMXO2-2000ZE	17	mA
		LCMXO2-4000ZE	18	mA
		LCMXO2-7000ZE	20	mA
I_{CCIO}	Bank Power Supply[6]	All devices	0	mA

1. For further information on supply current, please refer to TN1198, Power Estimation and Management for MachXO2 Devices.
2. Assumes all inputs are held at V_{CCIO} or GND and all outputs are tri-stated.
3. Typical user pattern.
4. JTAG programming is at 25 MHz.
5. TJ = 25 °C, power supplies at nominal voltage.
6. Per bank. V_{CCIO} = 2.5 V. Does not include pull-up/pull-down.

1. Exact performance may vary with device and design implementation. Commercial timing numbers are shown at 85 °C and 1.14 V. Other operating conditions, including industrial, can be extracted from the Diamond software.
2. General I/O timing numbers based on LVCMOS 2.5, 8 mA, 0 pf load, fast slew rate.
3. Generic DDR timing numbers based on LVDS I/O (for input, output, and clock ports).
4. DDR timing numbers based on SSTL25. DDR2 timing numbers based on SSTL18. LPDDR timing numbers based in LVCMOS18.
5. 7:1 LVDS (GDDR71) uses the LVDS I/O standard (for input, output, and clock ports).
6. For Generic DDRX1 mode $t_{SU} = t_{HO} = (t_{DVE} - t_{DVA} - 0.03\ ns)/2$.
7. The t_{SU_DEL} and t_{H_DEL} values use the SCLK_ZERHOLD default step size. Each step is 167 ps (–3), 182 ps (–2), 195 ps (–1).
8. This number for general purpose usage. Duty cycle tolerance is +/–10%.
9. Duty cycle is +/– 5% for system usage.
10. The above timing numbers are generated using the Diamond design tool. Exact performance may vary with the device selected.
11. High-speed DDR and LVDS not supported in SG32 (32-Pin QFN) packages.
12. Advance information for MachXO2 devices in 48 QFN packages.
13. DDR memory interface not supported in QN84 (84 QFN) and SG32 (32 QFN) packages.

Flash Download Time[1, 2]

Symbol	Parameter	Device	Typ.	Units
$t_{REFRESH}$	POR to Device I/O Active	LCMXO2-256	0.6	ms
		LCMXO2-640	1.0	ms
		LCMXO2-640U	1.9	ms
		LCMXO2-1200	1.9	ms
		LCMXO2-1200U	1.4	ms
		LCMXO2-2000	1.4	ms
		LCMXO2-2000U	2.4	ms
		LCMXO2-4000	2.4	ms
		LCMXO2-7000	3.8	ms

1. Assumes sysMEM EBR initialized to an all zero pattern if they are used.
2. The Flash download time is measured starting from the maximum voltage of POR trip point.

JTAG Port Timing Specifications

Symbol	Parameter	Min.	Max.	Units
f_{MAX}	TCK clock frequency	—	25	MHz
t_{BTCPH}	TCK [BSCAN] clock pulse width high	20	—	ns

1. This part number has a tape and reel quantity of 5,000 units with a minimum order quantity of 10,000 units. Order quantities must be in increments of 5,000 units. For example, a 10,000 unit order will be shipped in two reels with one reel containing 5,000 units and the other reel with less than 5,000 units (depending on test yields). Unserviced backlog will be canceled.
2. This part number has a tape and reel quantity of 1,000 units with a minimum order quantity of 1,000. Order quantities must be in increments of 1,000 units. For example, a 5,000 unit order will be shipped as 5 reels of 1000 units each.
3. This part number has a tape and reel quantity of 50 units with a minimum order quantity of 50. Order quantities must be in increments of 50 units. For example, a 1,000 unit order will be shipped as 20 reels of 50 units each.

Date	Version	Section	Change Summary
May 2016	3.2	All	Moved designation for 84 QFN package information from 'Advanced' to 'Final'.
		Introduction	Updated the Features section. Revised Table 1-1, MachXO2 Family Selection Guide. — Added ‘Advanced’ 48 QFN package. — Revised footnote 6. — Added footnote 9.
		DC and Switching Characteristics	Updated the MachXO2 External Switching Characteristics – HC/HE Devices section. Added footnote 12.
			Updated the MachXO2 External Switching Characteristics – ZE Devices section. Added footnote 12.
		Pinout Information	Updated the Signal Descriptions section. Added information on GND signal.
			Updated the Pinout Information Summary section. — Added ‘Advanced’ MachXO2-256 48 QFN values. — Added ‘Advanced’ MachXO2-640 48 QFN values. — Added footnote to GND. — Added footnotes 2 and 3.
		Ordering Information	Updated the MachXO2 Part Number Description section. Added ‘Advanced’ SG48 package and revised footnote.
			Updated the Ordering Information section. — Added part numbers for ‘Advanced’ QFN 48 package.
March 2016	3.1	Introduction	Updated the Features section. Revised Table 1-1, MachXO2 Family Selection Guide. — Added 32 QFN value for XO2-1200. — Added 84 QFN (7 mm x 7 mm, 0.5 mm) package. — Modified package name to 100-pin TQFP. — Modified package name to 144-pin TQFP. — Added footnote.
		Architecture	Updated the Typical I/O Behavior During Power-up section. Removed reference to TN1202.
		DC and Switching Characteristics	Updated the sysCONFIG Port Timing Specifications section. Revised $t_{DPPDONE}$ and $t_{DPPINIT}$ Max. values per PCN 03A-16, released March 2016.
		Pinout Information	Updated the Pinout Information Summary section. — Added MachXO2-1200 32 QFN values. — Added ‘Advanced’ MachXO2-4000 84 QFN values.
		Ordering Information	Updated the MachXO2 Part Number Description section. Added ‘Advanced’ QN84 package and footnote.
			Updated the Ordering Information section. — Added part numbers for 1280 LUTs QFN 32 package. — Added part numbers for 4320 LUTs QFN 84 package.
March 2015	3.0	Introduction	Updated the Features section. Revised Table 1-1, MachXO2 Family Selection Guide. — Changed 64-ball ucBGA dimension.
		Architecture	Updated the Device Configuration section. Added JTAGENB to TAP dual purpose pins.

Date	Version	Section	Change Summary
December 2014	2.9	Introduction	Updated the Features section. Revised Table 1-1, MachXO2 Family Selection Guide. — Removed XO2-4000U data. — Removed 400-ball ftBGA. — Removed 25-ball WLCSP value for XO2-2000U.
		DC and Switching Characteristics	Updated the Recommended Operating Conditions section. Adjusted Max. values for V_{CC} and V_{CCIO}.
			Updated the sysIO Recommended Operating Conditions section. Adjusted Max. values for LVCMOS 3.3, LVTTL, PCI, LVDS33 and LVPECL.
		Pinout Information	Updated the Pinout Information Summary section. Removed MachXO2-4000U.
		Ordering Information	Updated the MachXO2 Part Number Description section. Removed BG400 package.
			Updated the High-Performance Commercial Grade Devices with Voltage Regulator, Halogen Free (RoHS) Packaging section. Removed LCMXO2-4000UHC part numbers.
			Updated the High-Performance Industrial Grade Devices with Voltage Regulator, Halogen Free (RoHS) Packaging section. Removed LCMXO2-4000UHC part numbers.
November 2014	2.8	Introduction	Updated the Features section. — Revised I/Os under Flexible Logic Architecture. — Revised standby power under Ultra Low Power Devices. — Revise input frequency range under Flexible On-Chip Clocking.
			Updated Table 1-1, MachXO2 Family Selection Guide. — Added XO2-4000U data. — Removed HE and ZE device options for XO2-4000. — Added 400-ball ftBGA.
		Pinout Information	Updated the Pinout Information Summary section. Added MachXO2-4000U caBGA400 and MachXO2-7000 caBGA400.
		Ordering Information	Updated the MachXO2 Part Number Description section. Added BG400 package.
			Updated the Ordering Information section. Added MachXO2-4000U caBGA400 and MachXO2-7000 caBGA400 part numbers.
October 2014	2.7	Ordering Information	Updated the Ultra Low Power Industrial Grade Devices, Halogen Free (RoHS) Packaging section. Fixed typo in LCMXO2-2000ZE-1UWG49ITR part number package.
		Architecture	Updated the Supported Standards section. Added MIPI information to Table 2-12. Supported Input Standards and Table 2-13. Supported Output Standards.
		DC and Switching Characteristics	Updated the BLVDS section. Changed output impedance nominal values in Table 3-2, BLVDS DC Condition.
			Updated the LVPECL section. Changed output impedance nominal value in Table 3-3, LVPECL DC Condition.
			Updated the sysCONFIG Port Timing Specifications section. Updated INITN low time values.
July 2014	2.6	DC and Switching Characteristics	Updated sysIO Single-Ended DC Electrical Characteristics[1, 2] section. Updated footnote 4.
			Updated Register-to-Register Performance section. Updated footnote.
		Ordering Information	Updated UW49 package to UWG49 in MachXO2 Part Number Description.
			Updated LCMXO2-2000ZE-1UWG49CTR package in Ultra Low Power Commercial Grade Devices, Halogen Free (RoHS) Packaging.

Date	Version	Section	Change Summary
February 2012	01.7	All	Updated document with new corporate logo.
	01.6	—	Data sheet status changed from preliminary to final.
		Introduction	MachXO2 Family Selection Guide table – Removed references to 49-ball WLCSP.
		DC and Switching Characteristics	Updated Flash Download Time table.
			Modified Storage Temperature in the Absolute Maximum Ratings section.
			Updated I_{DK} max in Hot Socket Specifications table.
			Modified Static Supply Current tables for ZE and HC/HE devices.
			Updated Power Supply Ramp Rates table.
			Updated Programming and Erase Supply Current tables.
			Updated data in the External Switching Characteristics table.
			Corrected Absolute Maximum Ratings for Dedicated Input Voltage Applied for LCMXO2 HC.
			DC Electrical Characteristics table – Minor corrections to conditions for I_{IL}, I_{IH}.
		Pinout Information	Removed references to 49-ball WLCSP.
			Signal Descriptions table – Updated description for GND, VCC, and VCCIOx.
			Updated Pin Information Summary table – Number of VCCIOs, GNDs, VCCs, and Total Count of Bonded Pins for MachXO2-256, 640, and 640U and Dual Function I/O for MachXO2-4000 332caBGA.
		Ordering Information	Removed references to 49-ball WLCSP
August 2011	01.5	DC and Switching Characteristics	Updated ESD information.
		Ordering Information	Updated footnote for ordering WLCSP devices.
	01.4	Architecture	Updated information in Clock/Control Distribution Network and sysCLOCK Phase Locked Loops (PLLs).
		DC and Switching Characteristics	Updated I_{IL} and I_{IH} conditions in the DC Electrical Characteristics table.
		Pinout Information	Included number of 7:1 and 8:1 gearboxes (input and output) in the pin information summary tables.
			Updated Pin Information Summary table: Dual Function I/O, DQS Groups Bank 1, Total General Purpose Single-Ended I/O, Differential I/O Per Bank, Total Count of Bonded Pins, Gearboxes. Added column of data for MachXO2-2000 49 WLCSP.
		Ordering Information	Updated R1 Device Specifications text section with information on migration from MachXO2-1200-R1 to Standard (non-R1) devices.
			Corrected Supply Voltage typo for part numbers: LCMX02-2000UHE-4FG484I, LCMX02-2000UHE-5FG484I, LCMX02-2000UHE-6FG484I.
			Added footnote for WLCSP package parts.
		Supplemental Information	Removed reference to Stand-alone Power Calculator for MachXO2 Devices. Added reference to AN8086, Designing for Migration from MachXO2-1200-R1 to Standard (non-R1) Devices.
