### Understanding **Embedded - FPGAs (Field Programmable Gate Array)**

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

### **Applications of Embedded - FPGAs**

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications,

#### **Details**

Product Status	Active
Number of LABs/CLBs	264
Number of Logic Elements/Cells	2112
Total RAM Bits	75776
Number of I/O	111
Number of Gates	-
Voltage - Supply	1.14V ~ 1.26V
Mounting Type	Surface Mount
Operating Temperature	0°C ~ 85°C (TJ)
Package / Case	144-LQFP
Supplier Device Package	144-TQFP (20x20)
Purchase URL	<a href="https://www.e-xfl.com/product-detail/lattice-semiconductor/lcmxo2-2000he-5tg144c">https://www.e-xfl.com/product-detail/lattice-semiconductor/lcmxo2-2000he-5tg144c</a>

Data Sheet DS1035

### Architecture Overview

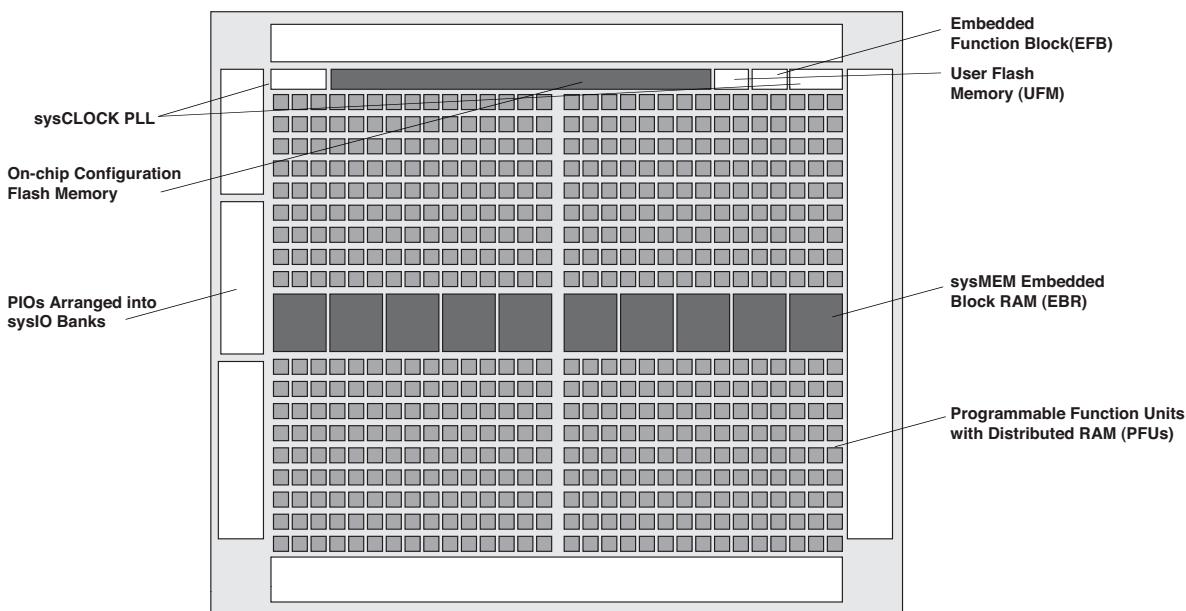

The MachXO2 family architecture contains an array of logic blocks surrounded by Programmable I/O (PIO). The larger logic density devices in this family have sysCLOCK™ PLLs and blocks of sysMEM Embedded Block RAM (EBRs). Figure 2-1 and Figure 2-2 show the block diagrams of the various family members.

**Figure 2-1. Top View of the MachXO2-1200 Device**

Note: MachXO2-256, and MachXO2-640/U are similar to MachXO2-1200. MachXO2-256 has a lower LUT count and no PLL or EBR blocks. MachXO2-640 has no PLL, a lower LUT count and two EBR blocks. MachXO2-640U has a lower LUT count, one PLL and seven EBR blocks.

**Figure 2-2. Top View of the MachXO2-4000 Device**

Note: MachXO2-1200U, MachXO2-2000/U and MachXO2-7000 are similar to MachXO2-4000. MachXO2-1200U and MachXO2-2000 have a lower LUT count, one PLL, and eight EBR blocks. MachXO2-2000U has a lower LUT count, two PLLs, and 10 EBR blocks. MachXO2-7000 has a higher LUT count, two PLLs, and 26 EBR blocks.

## Modes of Operation

Each slice has up to four potential modes of operation: Logic, Ripple, RAM and ROM.

### Logic Mode

In this mode, the LUTs in each slice are configured as 4-input combinatorial lookup tables. A LUT4 can have 16 possible input combinations. Any four input logic functions can be generated by programming this lookup table. Since there are two LUT4s per slice, a LUT5 can be constructed within one slice. Larger look-up tables such as LUT6, LUT7 and LUT8 can be constructed by concatenating other slices. Note LUT8 requires more than four slices.

### Ripple Mode

Ripple mode supports the efficient implementation of small arithmetic functions. In Ripple mode, the following functions can be implemented by each slice:

- Addition 2-bit
- Subtraction 2-bit
- Add/subtract 2-bit using dynamic control
- Up counter 2-bit
- Down counter 2-bit
- Up/down counter with asynchronous clear
- Up/down counter with preload (sync)
- Ripple mode multiplier building block
- Multiplier support
- Comparator functions of A and B inputs
  - A greater-than-or-equal-to B
  - A not-equal-to B
  - A less-than-or-equal-to B

Ripple mode includes an optional configuration that performs arithmetic using fast carry chain methods. In this configuration (also referred to as CCU2 mode) two additional signals, Carry Generate and Carry Propagate, are generated on a per-slice basis to allow fast arithmetic functions to be constructed by concatenating slices.

### RAM Mode

In this mode, a 16x4-bit distributed single port RAM (SPR) can be constructed by using each LUT block in Slice 0 and Slice 1 as a 16x1-bit memory. Slice 2 is used to provide memory address and control signals.

MachXO2 devices support distributed memory initialization.

The Lattice design tools support the creation of a variety of different size memories. Where appropriate, the software will construct these using distributed memory primitives that represent the capabilities of the PFU. Table 2-3 shows the number of slices required to implement different distributed RAM primitives. For more information about using RAM in MachXO2 devices, please see TN1201, [Memory Usage Guide for MachXO2 Devices](#).

**Table 2-3. Number of Slices Required For Implementing Distributed RAM**

	SPR 16x4	PDPR 16x4
Number of slices	3	3

Note: SPR = Single Port RAM, PDPR = Pseudo Dual Port RAM

**Figure 2-5. Primary Clocks for MachXO2 Devices**

Primary clocks for MachXO2-640U, MachXO2-1200/U and larger devices.

Note: MachXO2-640 and smaller devices do not have inputs from the Edge Clock Divider or PLL and fewer routing inputs. These devices have 17:1 muxes instead of 27:1 muxes.

Eight secondary high fanout nets are generated from eight 8:1 muxes as shown in Figure 2-6. One of the eight inputs to the secondary high fanout net input mux comes from dual function clock pins and the remaining seven come from internal routing. The maximum frequency for the secondary clock network is shown in MachXO2 External Switching Characteristics table.

## Hot Socketing

The MachXO2 devices have been carefully designed to ensure predictable behavior during power-up and power-down. Leakage into I/O pins is controlled to within specified limits. This allows for easy integration with the rest of the system. These capabilities make the MachXO2 ideal for many multiple power supply and hot-swap applications.

## On-chip Oscillator

Every MachXO2 device has an internal CMOS oscillator. The oscillator output can be routed as a clock to the clock tree or as a reference clock to the sysCLOCK PLL using general routing resources. The oscillator frequency can be divided by internal logic. There is a dedicated programming bit and a user input to enable/disable the oscillator. The oscillator frequency ranges from 2.08 MHz to 133 MHz. The software default value of the Master Clock (MCLK) is nominally 2.08 MHz. When a different MCLK is selected during the design process, the following sequence takes place:

1. Device powers up with a nominal MCLK frequency of 2.08 MHz.
2. During configuration, users select a different master clock frequency.
3. The MCLK frequency changes to the selected frequency once the clock configuration bits are received.
4. If the user does not select a master clock frequency, then the configuration bitstream defaults to the MCLK frequency of 2.08 MHz.

Table 2-14 lists all the available MCLK frequencies.

**Table 2-14. Available MCLK Frequencies**

MCLK (MHz, Nominal)	MCLK (MHz, Nominal)	MCLK (MHz, Nominal)
2.08 (default)	9.17	33.25
2.46	10.23	38
3.17	13.3	44.33
4.29	14.78	53.2
5.54	20.46	66.5
7	26.6	88.67
8.31	29.56	133

## Embedded Hardened IP Functions and User Flash Memory

All MachXO2 devices provide embedded hardened functions such as SPI, I<sup>2</sup>C and Timer/Counter. MachXO2-640/U and higher density devices also provide User Flash Memory (UFM). These embedded blocks interface through the WISHBONE interface with routing as shown in Figure 2-20.

**Figure 2-21. I<sup>2</sup>C Core Block Diagram**

Table 2-15 describes the signals interfacing with the I<sup>2</sup>C cores.

**Table 2-15. I<sup>2</sup>C Core Signal Description**

Signal Name	I/O	Description
i2c_scl	Bi-directional	Bi-directional clock line of the I <sup>2</sup> C core. The signal is an output if the I <sup>2</sup> C core is in master mode. The signal is an input if the I <sup>2</sup> C core is in slave mode. MUST be routed directly to the pre-assigned I/O of the chip. Refer to the Pinout Information section of this document for detailed pad and pin locations of I <sup>2</sup> C ports in each MachXO2 device.
i2c_sda	Bi-directional	Bi-directional data line of the I <sup>2</sup> C core. The signal is an output when data is transmitted from the I <sup>2</sup> C core. The signal is an input when data is received into the I <sup>2</sup> C core. MUST be routed directly to the pre-assigned I/O of the chip. Refer to the Pinout Information section of this document for detailed pad and pin locations of I <sup>2</sup> C ports in each MachXO2 device.
i2c_irqo	Output	Interrupt request output signal of the I <sup>2</sup> C core. The intended usage of this signal is for it to be connected to the WISHBONE master controller (i.e. a microcontroller or state machine) and request an interrupt when a specific condition is met. These conditions are described with the I <sup>2</sup> C register definitions.
cfg_wake	Output	Wake-up signal – To be connected only to the power module of the MachXO2 device. The signal is enabled only if the “Wakeup Enable” feature has been set within the EFB GUI, I <sup>2</sup> C Tab.
cfg_stby	Output	Stand-by signal – To be connected only to the power module of the MachXO2 device. The signal is enabled only if the “Wakeup Enable” feature has been set within the EFB GUI, I <sup>2</sup> C Tab.

## Hardened SPI IP Core

Every MachXO2 device has a hard SPI IP core that can be configured as a SPI master or slave. When the IP core is configured as a master it will be able to control other SPI enabled chips connected to the SPI bus. When the core is configured as the slave, the device will be able to interface to an external SPI master. The SPI IP core on MachXO2 devices supports the following functions:

- Configurable Master and Slave modes
- Full-Duplex data transfer
- Mode fault error flag with CPU interrupt capability
- Double-buffered data register
- Serial clock with programmable polarity and phase
- LSB First or MSB First Data Transfer
- Interface to custom logic through 8-bit WISHBONE interface

## BLVDS

The MachXO2 family supports the BLVDS standard through emulation. The output is emulated using complementary LVCMS outputs in conjunction with resistors across the driver outputs. The input standard is supported by the LVDS differential input buffer. BLVDS is intended for use when multi-drop and bi-directional multi-point differential signaling is required. The scheme shown in Figure 3-2 is one possible solution for bi-directional multi-point differential signals.

**Figure 3-2. BLVDS Multi-point Output Example**

**Table 3-2. BLVDS DC Conditions<sup>1</sup>**

**Over Recommended Operating Conditions**

Symbol	Description	Nominal		Units
		Zo = 45	Zo = 90	
Z <sub>OUT</sub>	Output impedance	20	20	Ohms
R <sub>S</sub>	Driver series resistance	80	80	Ohms
R <sub>TLEFT</sub>	Left end termination	45	90	Ohms
R <sub>TRIGHT</sub>	Right end termination	45	90	Ohms
V <sub>OH</sub>	Output high voltage	1.376	1.480	V
V <sub>OL</sub>	Output low voltage	1.124	1.020	V
V <sub>OD</sub>	Output differential voltage	0.253	0.459	V
V <sub>CM</sub>	Output common mode voltage	1.250	1.250	V
I <sub>DC</sub>	DC output current	11.236	10.204	mA

1. For input buffer, see LVDS table.

## LVPECL

The MachXO2 family supports the differential LVPECL standard through emulation. This output standard is emulated using complementary LVCMS outputs in conjunction with resistors across the driver outputs on all the devices. The LVPECL input standard is supported by the LVDS differential input buffer. The scheme shown in Differential LVPECL is one possible solution for point-to-point signals.

**Figure 3-3. Differential LVPECL**

**Table 3-3. LVPECL DC Conditions<sup>1</sup>**

Over Recommended Operating Conditions

Symbol	Description	Nominal	Units
Z <sub>OUT</sub>	Output impedance	20	Ohms
R <sub>S</sub>	Driver series resistor	93	Ohms
R <sub>P</sub>	Driver parallel resistor	196	Ohms
R <sub>T</sub>	Receiver termination	100	Ohms
V <sub>OH</sub>	Output high voltage	2.05	V
V <sub>OL</sub>	Output low voltage	1.25	V
V <sub>OD</sub>	Output differential voltage	0.80	V
V <sub>CM</sub>	Output common mode voltage	1.65	V
Z <sub>BACK</sub>	Back impedance	100.5	Ohms
I <sub>DC</sub>	DC output current	12.11	mA

1. For input buffer, see LVDS table.

For further information on LVPECL, BLVDS and other differential interfaces please see details of additional technical documentation at the end of the data sheet.

- Exact performance may vary with device and design implementation. Commercial timing numbers are shown at 85 °C and 1.14 V. Other operating conditions, including industrial, can be extracted from the Diamond software.
- General I/O timing numbers based on LVC MOS 2.5, 8 mA, 0pf load, fast slew rate.
- Generic DDR timing numbers based on LVDS I/O (for input, output, and clock ports).
- DDR timing numbers based on SSTL25. DDR2 timing numbers based on SSTL18. LPDDR timing numbers based in LVC MOS18.
- 7:1 LVDS (GDDR71) uses the LVDS I/O standard (for input, output, and clock ports).
- For Generic DDRX1 mode  $t_{SU} = t_{HO} = (t_{DVE} - t_{DVA} - 0.03 \text{ ns})/2$ .
- The  $t_{SU\_DEL}$  and  $t_{H\_DEL}$  values use the SCLK\_ZERHOLD default step size. Each step is 105 ps (-6), 113 ps (-5), 120 ps (-4).
- This number for general purpose usage. Duty cycle tolerance is +/- 10%.
- Duty cycle is +/- 5% for system usage.
- The above timing numbers are generated using the Diamond design tool. Exact performance may vary with the device selected.
- High-speed DDR and LVDS not supported in SG32 (32 QFN) packages.
- Advance information for MachXO2 devices in 48 QFN packages.
- DDR memory interface not supported in QN84 (84 QFN) and SG32 (32 QFN) packages.

## sysCLOCK PLL Timing (Continued)

### Over Recommended Operating Conditions

Parameter	Descriptions	Conditions	Min.	Max.	Units
$t_{ROTATE\_WD}$	PHASESTEP Pulse Width		4	—	VCO Cycles

1. Period jitter sample is taken over 10,000 samples of the primary PLL output with a clean reference clock. Cycle-to-cycle jitter is taken over 1000 cycles. Phase jitter is taken over 2000 cycles. All values per JESD65B.
2. Output clock is valid after  $t_{LOCK}$  for PLL reset and dynamic delay adjustment.
3. Using LVDS output buffers.
4. CLKOS as compared to CLKOP output for one phase step at the maximum VCO frequency. See TN1199, [MachXO2 sysCLOCK PLL Design and Usage Guide](#) for more details.
5. At minimum  $f_{PF}$ . As the  $f_{PF}$  increases the time will decrease to approximately 60% the value listed.
6. Maximum allowed jitter on an input clock. PLL unlock may occur if the input jitter exceeds this specification. Jitter on the input clock may be transferred to the output clocks, resulting in jitter measurements outside the output specifications listed in this table.
7. Edge Duty Trim Accuracy is a percentage of the setting value. Settings available are 70 ps, 140 ps, and 280 ps in addition to the default value of none.
8. Jitter values measured with the internal oscillator operating. The jitter values will increase with loading of the PLD fabric and in the presence of SSO noise.

## sysCONFIG Port Timing Specifications

Symbol	Parameter	Min.	Max.	Units
<b>All Configuration Modes</b>				
$t_{PRGM}$	PROGRAMN low pulse accept	55	—	ns
$t_{PRGMJ}$	PROGRAMN low pulse rejection	—	25	ns
$t_{INITL}$	INITN low time	LCMxo2-256	—	30
		LCMxo2-640	—	35
		LCMxo2-640U/ LCMxo2-1200	—	55
		LCMxo2-1200U/ LCMxo2-2000	—	70
		LCMxo2-2000U/ LCMxo2-4000	—	105
		LCMxo2-7000	—	130
$t_{DPPINIT}$	PROGRAMN low to INITN low	—	150	ns
$t_{DPPDONE}$	PROGRAMN low to DONE low	—	150	ns
$t_{IODISS}$	PROGRAMN low to I/O disable	—	120	ns
<b>Slave SPI</b>				
$f_{MAX}$	CCLK clock frequency	—	66	MHz
$t_{CCLKH}$	CCLK clock pulse width high	7.5	—	ns
$t_{CCLKL}$	CCLK clock pulse width low	7.5	—	ns
$t_{STSU}$	CCLK setup time	2	—	ns
$t_{STH}$	CCLK hold time	0	—	ns
$t_{STCO}$	CCLK falling edge to valid output	—	10	ns
$t_{STOZ}$	CCLK falling edge to valid disable	—	10	ns
$t_{STOV}$	CCLK falling edge to valid enable	—	10	ns
$t_{SCS}$	Chip select high time	25	—	ns
$t_{SCSS}$	Chip select setup time	3	—	ns
$t_{SCSH}$	Chip select hold time	3	—	ns
<b>Master SPI</b>				
$f_{MAX}$	MCLK clock frequency	—	133	MHz
$t_{MCLKH}$	MCLK clock pulse width high	3.75	—	ns
$t_{MCLKL}$	MCLK clock pulse width low	3.75	—	ns
$t_{STSU}$	MCLK setup time	5	—	ns
$t_{STH}$	MCLK hold time	1	—	ns
$t_{CSSPI}$	INITN high to chip select low	100	200	ns
$t_{MCLK}$	INITN high to first MCLK edge	0.75	1	μs

1. Lattice recommends soldering the central thermal pad onto the top PCB ground for improved thermal resistance.

2. For 48 QFN package, exposed die pad is the device ground.

3. 48-pin QFN information is 'Advanced'.

1. This part number has a tape and reel quantity of 5,000 units with a minimum order quantity of 10,000 units. Order quantities must be in increments of 5,000 units. For example, a 10,000 unit order will be shipped in two reels with one reel containing 5,000 units and the other reel with less than 5,000 units (depending on test yields). Unserviced backlog will be canceled.
2. This part number has a tape and reel quantity of 1,000 units with a minimum order quantity of 1,000. Order quantities must be in increments of 1,000 units. For example, a 5,000 unit order will be shipped as 5 reels of 1000 units each.
3. This part number has a tape and reel quantity of 50 units with a minimum order quantity of 50. Order quantities must be in increments of 50 units. For example, a 1,000 unit order will be shipped as 20 reels of 50 units each.

# MachXO2 Family Data Sheet

## Revision History

March 2017

Data Sheet DS1035

Date	Version	Section	Change Summary
March 2017	3.3	DC and Switching Characteristics	Updated the <a href="#">Absolute Maximum Ratings</a> section. Added standards.
			Updated the <a href="#">sysIO Recommended Operating Conditions</a> section. Added standards.
			Updated the <a href="#">sysIO Single-Ended DC Electrical Characteristics</a> section. Added standards.
			Updated the <a href="#">MachXO2 External Switching Characteristics – HC/HE Devices</a> section. Under 7:1 LVDS Outputs – GDDR71_TX.ECLK.7:1, the D <sub>V<sub>B</sub></sub> and the D <sub>V<sub>A</sub></sub> parameters were changed to D <sub>I<sub>B</sub></sub> and D <sub>I<sub>A</sub></sub> . The parameter descriptions were also modified.
			Updated the <a href="#">MachXO2 External Switching Characteristics – ZE Devices</a> section. Under 7:1 LVDS Outputs – GDDR71_TX.ECLK.7:1, the D <sub>V<sub>B</sub></sub> and the D <sub>V<sub>A</sub></sub> parameters were changed to D <sub>I<sub>B</sub></sub> and D <sub>I<sub>A</sub></sub> . The parameter descriptions were also modified.
		Pinout Information	Updated the <a href="#">Signal Descriptions</a> section. Revised the descriptions of the PROGRAMN, INITN, and DONE signals.
			Updated the <a href="#">Pinout Information Summary</a> section. Added footnote to MachXO2-1200 32 QFN.
	3.3	Ordering Information	Updated the <a href="#">MachXO2 Part Number Description</a> section. Corrected the MG184, BG256, FTG256 package information. Added "(0.8 mm Pitch)" to BG332.
			Updated the <a href="#">Ultra Low Power Industrial Grade Devices, Halogen Free (RoHS) Packaging</a> section. — Updated LCMXO2-1200ZE-1UWG25ITR50 footnote. — Corrected footnote numbering typo. — Added the LCMXO2-2000ZE-1UWG49ITR50 and LCMXO2-2000ZE-1UWG49ITR1K part numbers. Updated/added footnote/s.

Date	Version	Section	Change Summary
December 2014	2.9	Introduction	Updated the Features section. Revised Table 1-1, MachXO2 Family Selection Guide. — Removed XO2-4000U data. — Removed 400-ball ftBGA. — Removed 25-ball WLCSP value for XO2-2000U.
		DC and Switching Characteristics	Updated the Recommended Operating Conditions section. Adjusted Max. values for $V_{CC}$ and $V_{CCIO}$ .
		Pinout Information	Updated the sysIO Recommended Operating Conditions section. Adjusted Max. values for LVCMOS 3.3, LVTTL, PCI, LVDS33 and LVPECL.
		Ordering Information	Updated the Pinout Information Summary section. Removed MachXO2-4000U.
			Updated the MachXO2 Part Number Description section. Removed BG400 package.
			Updated the High-Performance Commercial Grade Devices with Voltage Regulator, Halogen Free (RoHS) Packaging section. Removed LCMXO2-4000UHC part numbers.
November 2014	2.8	Introduction	Updated the Features section. — Revised I/Os under Flexible Logic Architecture. — Revised standby power under Ultra Low Power Devices. — Revise input frequency range under Flexible On-Chip Clocking.
			Updated Table 1-1, MachXO2 Family Selection Guide. — Added XO2-4000U data. — Removed HE and ZE device options for XO2-4000. — Added 400-ball ftBGA.
		Pinout Information	Updated the Pinout Information Summary section. Added MachXO2-4000U caBGA400 and MachXO2-7000 caBGA400.
		Ordering Information	Updated the MachXO2 Part Number Description section. Added BG400 package.
			Updated the Ordering Information section. Added MachXO2-4000U caBGA400 and MachXO2-7000 caBGA400 part numbers.
October 2014	2.7	Ordering Information	Updated the Ultra Low Power Industrial Grade Devices, Halogen Free (RoHS) Packaging section. Fixed typo in LCMXO2-2000ZE-1UWG49ITR part number package.
		Architecture	Updated the Supported Standards section. Added MIPI information to Table 2-12. Supported Input Standards and Table 2-13. Supported Output Standards.
		DC and Switching Characteristics	Updated the BLVDS section. Changed output impedance nominal values in Table 3-2, BLVDS DC Condition.
			Updated the LVPECL section. Changed output impedance nominal value in Table 3-3, LVPECL DC Condition.
			Updated the sysCONFIG Port Timing Specifications section. Updated INITN low time values.
July 2014	2.6	DC and Switching Characteristics	Updated sysIO Single-Ended DC Electrical Characteristics <sup>1,2</sup> section. Updated footnote 4.
			Updated Register-to-Register Performance section. Updated footnote.
		Ordering Information	Updated UW49 package to UWG49 in MachXO2 Part Number Description.
			Updated LCMXO2-2000ZE-1UWG49CTR package in Ultra Low Power Commercial Grade Devices, Halogen Free (RoHS) Packaging.
