Understanding [Embedded - Microprocessors](#)

Embedded microprocessors are specialized computing chips designed to perform specific tasks within an embedded system. Unlike general-purpose microprocessors found in personal computers, embedded microprocessors are tailored for dedicated functions within larger systems, offering optimized performance, efficiency, and reliability. These microprocessors are integral to the operation of countless electronic devices, providing the computational power necessary for controlling processes, handling data, and managing communications.

Applications of [Embedded - Microprocessors](#)

Embedded microprocessors are utilized across a broad spectrum of applications, making them indispensable in

4 Thermal Characteristics

Table 3 shows the thermal characteristics for the MPC862/857T/857DSL.

Table 3. MPC862/857T/857DSL Thermal Resistance Data

Rating	Environment		Symbol	Value	Unit
Junction to ambient ¹	Natural Convection	Single layer board (1s)	$R_{\theta JA}$ ²	37	°C/W
		Four layer board (2s2p)	$R_{\theta JMA}$ ³	23	
	Air flow (200 ft/min)	Single layer board (1s)	$R_{\theta JMA}$ ³	30	
		Four layer board (2s2p)	$R_{\theta JMA}$ ³	19	
Junction to board ⁴			$R_{\theta JB}$	13	
Junction to case ⁵			$R_{\theta JC}$	6	
Junction to package top ⁶	Natural Convection		Ψ_{JT}	2	
	Air flow (200 ft/min)		Ψ_{JT}	2	

¹ Junction temperature is a function of on-chip power dissipation, package thermal resistance, mounting site (board) temperature, ambient temperature, air flow, power dissipation of other components on the board, and board thermal resistance.

² Per SEMI G38-87 and JEDEC JESD51-2 with the single layer board horizontal.

³ Per JEDEC JESD51-6 with the board horizontal.

⁴ Thermal resistance between the die and the printed circuit board per JEDEC JESD51-8. Board temperature is measured on the top surface of the board near the package.

⁵ Indicates the average thermal resistance between the die and the case top surface as measured by the cold plate method (MIL SPEC-883 Method 1012.1) with the cold plate temperature used for the case temperature. For exposed pad packages where the pad would be expected to be soldered, junction to case thermal resistance is a simulated value from the junction to the exposed pad without contact resistance.

⁶ Thermal characterization parameter indicating the temperature difference between package top and the junction temperature per JEDEC JESD51-2.
