NXP USA Inc. - MPC859DSLCZP50A Datasheet

Understanding Embedded - Microprocessors

Embedded microprocessors are specialized computing chips designed to perform specific tasks within an embedded system. Unlike general-purpose microprocessors found in personal computers, embedded microprocessors are tailored for dedicated functions within larger systems, offering optimized performance, efficiency, and reliability. These microprocessors are integral to the operation of countless electronic devices, providing the computational power necessary for controlling processes, handling data, and managing communications.

Applications of Embedded - Microprocessors

Embedded microprocessors are utilized across a broad spectrum of applications, making them indispensable in

Details	
Product Status	Obsolete
Core Processor	MPC8xx
Number of Cores/Bus Width	1 Core, 32-Bit
Speed	50MHz
Co-Processors/DSP	Communications; CPM
RAM Controllers	DRAM
Graphics Acceleration	No
Display & Interface Controllers	-
Ethernet	10Mbps (1), 10/100Mbps (1)
SATA	-
USB	-
Voltage - I/O	3.3V
Operating Temperature	-40°C ~ 100°C (TA)
Security Features	-
Package / Case	357-BBGA
Supplier Device Package	357-PBGA (25x25)
Purchase URL	https://www.e-xfl.com/product-detail/nxp-semiconductors/mpc859dslczp50a

Table 1 shows the functionality supported by the members of the MPC866/859 family.

2 Features

Table 1. MPC866 Family Functionality

Part	Cache		Ethernet		SCC	SMC
	Instruction	Data	10T	10/100		
MPC866P	16 Kbytes	8 Kbytes	Up to 4	1	4	2
MPC866T	4 Kbytes	4 Kbytes	Up to 4	1	4	2
MPC859P	16 Kbytes	8 Kbytes	1	1	1	2
MPC859T	4 Kbytes	4 Kbytes	1	1	1	2
MPC859DSL	4 Kbytes	4 Kbytes	1	1	1 [1]	1 [2]
MPC852T [3]	4 KBytes	4 Kbytes	2	1	2	1

[1] On the MPC859DSL, the SCC (SCC1) is for ethernet only. Also, the MPC859DSL does not support the Time Slot Assigner (TSA).

[2] On the MPC859DSL, the SMC (SMC1) is for UART only.

[3] For more details on the MPC852T, please refer to the *MPC852T Hardware Specifications.*

The following list summarizes the key MPC866/859 features:

- Embedded single-issue, 32-bit PowerPC™ core (implementing the PowerPC architecture) with thirty-two 32-bit general-purpose registers (GPRs)
  - The core performs branch prediction with conditional prefetch, without conditional execution
  - 4- or 8-Kbyte data cache and 4- or 16-Kbyte instruction cache (see Table 1)
    - 16-Kbyte instruction cache (MPC866P and MPC859P) is four-way, set-associative with 256 sets; 4-Kbyte instruction cache (MPC866T, MPC859T, and MPC859DSL) is two-way, set-associative with 128 sets.
    - 8-Kbyte data cache (MPC866P and MPC859P) is two-way, set-associative with 256 sets; 4-Kbyte data cache(MPC866T, MPC859T, and MPC859DSL) is two-way, set-associative with 128 sets.
    - Cache coherency for both instruction and data caches is maintained on 128-bit (4-word) cache blocks
    - Caches are physically addressed, implement a least recently used (LRU) replacement algorithm, and are lockable on a cache block basis.
  - MMUs with 32-entry TLB, fully associative instruction and data TLBs
  - MMUs support multiple page sizes of 4, 16, and 512 Kbytes, and 8 Mbytes; 16 virtual address spaces and 16 protection groups.
  - Advanced on-chip-emulation debug mode
- The MPC866/859 provides enhanced ATM functionality over that of the MPC860SAR. The MPC866/859 adds major new features available in 'enhanced SAR' (ESAR) mode, including the following:
  - Improved operation, administration, and maintenance (OAM) support
  - OAM performance monitoring (PM) support
  - Multiple APC priority levels available to support a range of traffic pace requirements

The MPC866/859 is comprised of three modules that each use a 32-bit internal bus: MPC8xx core, system integration unit (SIU), and communication processor module (CPM). The MPC866P block diagram is shown in Figure 1. The MPC859P/859T/859DSL block diagram is shown in Figure 2.

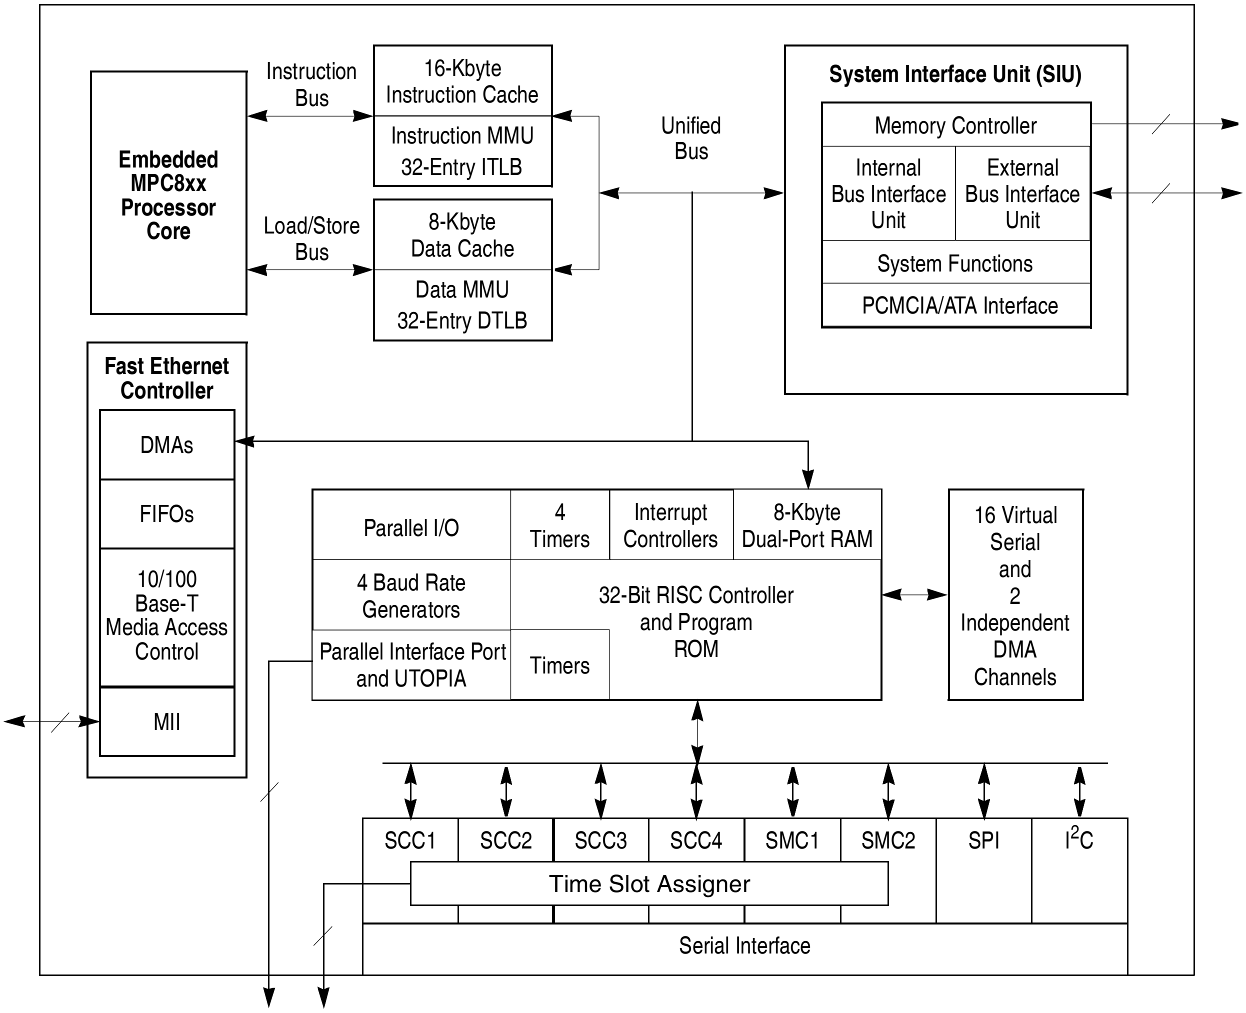

Figure 1. MPC866P Block Diagram

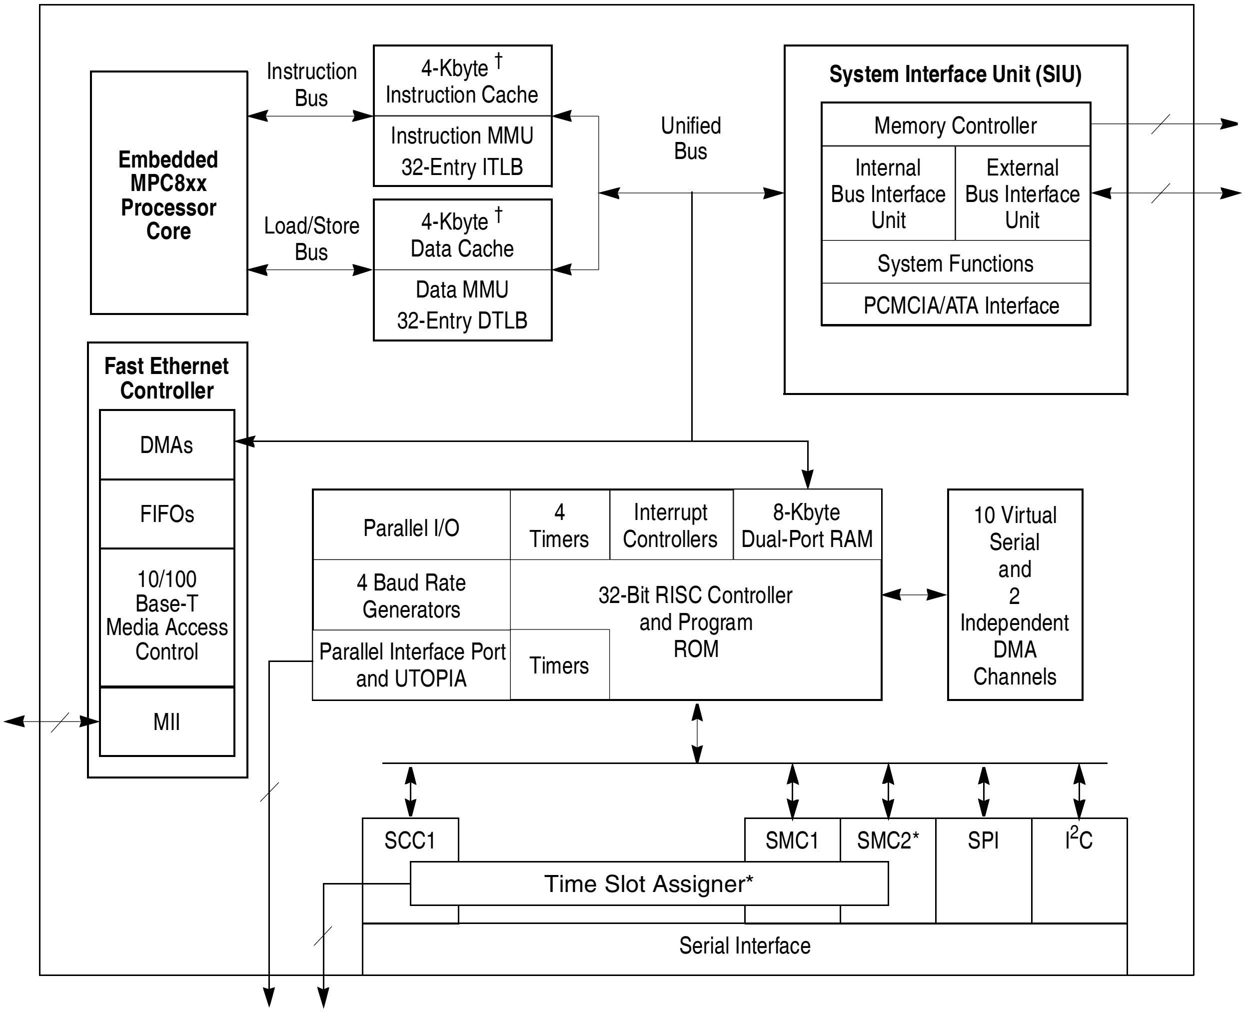

† The MPC859P has a 16-Kbyte instruction cache and a 8-Kbyte data cache.

* The MPC859DSL does not contain SMC2 nor the time slot assigner, and provides eight SDMA controllers.

Figure 2. MPC859P/859T/MPC859DSL Block Diagram

7.5 Experimental Determination

To determine the junction temperature of the device in the application after prototypes are available, the thermal characterization parameter (Ψ_{JT}) can be used to determine the junction temperature with a measurement of the temperature at the top center of the package case using the following equation:

$$T_J = T_T + (\Psi_{JT} \times P_D)$$

where:

Ψ_{JT} = thermal characterization parameter
T_T = thermocouple temperature on top of package
P_D = power dissipation in package

The thermal characterization parameter is measured per JESD51-2 specification published by JEDEC using a 40 gauge type T thermocouple epoxied to the top center of the package case. The thermocouple should be positioned so that the thermocouple junction rests on the package. A small amount of epoxy is placed over the thermocouple junction and over about 1 mm of wire extending from the junction. The thermocouple wire is placed flat against the package case to avoid measurement errors caused by cooling effects of the thermocouple wire.

16 Document Revision History

Table 40 lists significant changes between revisions of this document.

Table 40. Document Revision History

Revision Number	Date	Substantive Changes
0	5/2002	Initial revision
1	11/2002	Added the 5-V tolerant pins, new package dimensions, and other changes.
1.1	4/2003	Added the Spec. B1d and changed spec. B1a. Added the Note Solder sphere composition for MPC866XZP, MPC859DSLZP, and MPC859TZP is 62%Sn 36%Pb 2%Ag to Figure 15-79.
1.2	4/2003	Added the MPC859P.
1.3	5/2003	Changed the SPI Master Timing Specs. 162 and 164.
1.4	7-8/2003	• Added TxClav and RxClav to PB15 and PC15. Changed B28a through B28d and B29b to show that TRLX can be 0 or 1. • Added nontechnical reformatting.
1.5	3/14/2005	• Updated document template.
2	2/10/2006	• Updated orderable parts table.
