Understanding [Embedded - CPLDs \(Complex Programmable Logic Devices\)](#)

Embedded - CPLDs, or Complex Programmable Logic Devices, are highly versatile digital logic devices used in electronic systems. These programmable components are designed to perform complex logical operations and can be customized for specific applications. Unlike fixed-function ICs, CPLDs offer the flexibility to reprogram their configuration, making them an ideal choice for various embedded systems. They consist of a set of logic gates and programmable interconnects, allowing designers to implement complex logic circuits without needing custom hardware.

Applications of Embedded - CPLDs

Details

Product Status	Obsolete
Programmable Type	EE PLD
Delay Time tpd(1) Max	15 ns
Voltage Supply - Internal	3V ~ 5.5V
Number of Logic Elements/Blocks	-
Number of Macrocells	10
Number of Gates	-
Number of I/O	10
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Through Hole
Package / Case	24-DIP (0.300", 7.62mm)
Supplier Device Package	24-PDIP
Purchase URL	https://www.e-xfl.com/product-detail/microchip-technology/atf750lvc-15pi

Features

- 3.0V to 5.5V Operating Range
- Advanced, High-speed, Electrically-erasable Programmable Logic Device
 - Superset of 22V10
 - Enhanced Logic Flexibility
 - Architecturally Compatible with ATF750B and ATF750 Software and Hardware
- D- or T-type Flip-flop
- Product Term or Direct Input Pin Clocking
- 10 ns Maximum Pin-to-pin Delay with 5V Operation
- 15 ns Maximum Pin-to-pin Delay with 3V Operation
- Highest Density Programmable Logic Available in 24-pin Package
 - Advanced Electrically-erasable Technology
 - Reprogrammable
 - 100% Tested
- Increased Logic Flexibility
 - 42 Array Inputs, 20 Sum Terms and 20 Flip-flops
- Enhanced Output Logic Flexibility
 - All 20 Flip-flops Feed Back Internally
 - 10 Flip-flops are also Available as Outputs
- Programmable Pin-keeper Circuits
- Dual-in-line and Surface Mount Package in Standard Pinouts
- Commercial and Industrial Temperature Ranges
- 20-year Data Retention
- 2000V ESD Protection
- 1000 Erase/Write Cycles
- Green Package Options (Pb/Halide-free/RoHS Compliant) Available

1. Block Diagram

2. Description

The Atmel® “750” architecture is twice as powerful as most other 24-pin programmable logic devices. Increased product terms, sum terms, flip-flops and output logic configurations translate into more usable gates. High-speed logic and uniform, predictable delays guarantee fast in-system performance. The ATF750LVC is a high-performance CMOS (electrically-erasable) complex programmable logic device (CPLD) that utilizes Atmel’s proven electrically-erasable technology.

High-speed Complex Programmable Logic Device

ATF750LVC

Pin Name	Function
CLK	Clock
IN	Logic Inputs
I/O	Bi-directional Buffers
GND	Ground
VCC	3V to 5.5V Supply

Pinout diagram for the 28-pin DIP package of the ADXL045. The package is shown with pins numbered 1 to 28. Pin 1 is CLK/IN, Pin 2 is IN, Pin 3 is IN, Pin 4 is IN, Pin 5 is IN, Pin 6 is IN, Pin 7 is IN, Pin 8 is IN, Pin 9 is IN, Pin 10 is IN, Pin 11 is IN, Pin 12 is GND, Pin 13 is IN, Pin 14 is I/O, Pin 15 is I/O, Pin 16 is I/O, Pin 17 is I/O, Pin 18 is I/O, Pin 19 is I/O, Pin 20 is I/O, Pin 21 is I/O, Pin 22 is I/O, Pin 23 is I/O, Pin 24 is VCC.

4. Absolute Maximum Ratings*

Temperature Under Bias.....	-40°C to +85°C
Storage Temperature	-65°C to +150°C
Voltage on Any Pin with Respect to Ground	-2.0V to +7V ⁽¹⁾
Voltage on Input Pins with Respect to Ground During Programming.....	-2.0V to +14.0V ⁽¹⁾
Programming Voltage with Respect to Ground	-2.0V to +14.0V ⁽¹⁾

***NOTICE:** Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Note: 1. Minimum voltage is -0.6V DC, which may undershoot to -2.0V for pulses of less than 20 ns. Maximum output pin voltage is $V_{CC} + 0.75V$ DC, which may overshoot to 7V for pulses of less than 20 ns with VCC at VCC max.

5. DC and AC Operating Conditions

	Commercial	Industrial
Operating Temperature (Ambient)	0°C - 70°C	-40°C - +85°C
V _{CC} Power Supply	3.0 - 5.25V	3.0 - 5.5V

6. Clock Mux

7. Output Options

8. Bus-friendly Pin-keeper Input and I/Os

All input and I/O pins on the ATF750LVC have programmable “pin-keeper” circuits. If activated, when any pin is driven high or low and then subsequently left floating, it will stay at that previous high or low level.

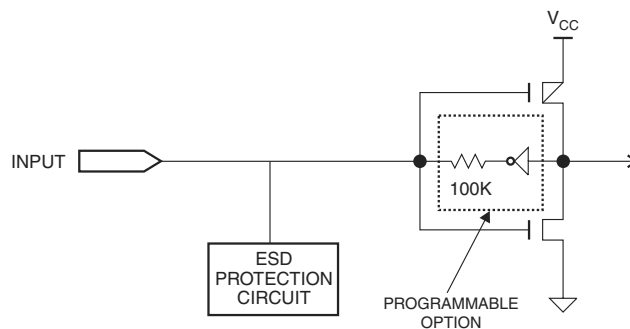

This circuitry prevents unused input and I/O lines from floating to intermediate voltage levels, which cause unnecessary power consumption and system noise. The keeper circuits eliminate the need for external pull-up resistors and eliminate their DC power consumption.

Enabling or disabling of the pin-keeper circuits is controlled by the device type chosen in the logic compiler device selection menu. Please refer to the software compiler table for more details. Once the pin-keeper circuits are disabled, normal termination procedures are required for unused inputs and I/Os.

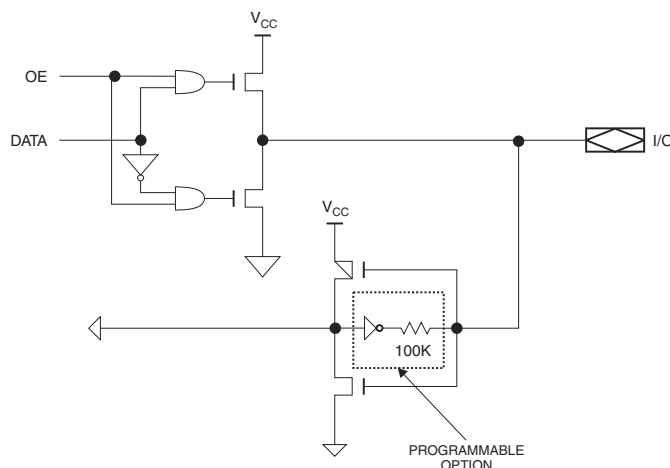

Table 1. Software Compiler Mode Selection

Synario	WinCupl	Pin-keeper Circuit
ATF750LVC	V750C	Disabled
ATF750LVC (PPK)	V750CPPK	Enabled

19. Functional Logic Diagram ATF750LVC, Lower Half

20. Using the ATF750LVC's Many Advanced Features

The ATF750LVC's advanced flexibility packs more usable gates into 24-pins than any other logic device. The ATF750LVCs start with the popular 22V10 architecture, and add several enhanced features:

- **Selectable D- and T-type Registers**

Each ATF750LVC flip-flop can be individually configured as either D- or T-type. Using the T-type configuration, JK and SR flip-flops are also easily created. These options allow more efficient product term usage.

- **Selectable Asynchronous Clocks**

Each of the ATF750LVC's flip-flops may be clocked by its own clock product term or directly from Pin 1 (SMD Lead 2). This removes the constraint that all registers must use the same clock. Buried state machines, counters and registers can all coexist in one device while running on separate clocks. Individual flip-flop clock source selection further allows mixing higher performance pin clocking and flexible product term clocking within one design.

- **A Full Bank of Ten More Registers**

The ATF750LVC provides two flip-flops per output logic cell for a total of 20. Each register has its own sum term, its own reset term and its own clock term.

- **Independent I/O Pin and Feedback Paths**

Each I/O pin on the ATF750LVC has a dedicated input path. Each of the 20 registers has its own feedback terms into the array as well. This feature, combined with individual product terms for each I/O's output enable, facilitates true bi-directional I/O design.

21. Synchronous Preset and Asynchronous Reset

One synchronous preset line is provided for all 20 registers in the ATF750LVC. The appropriate input signals to cause the internal clocks to go to a high state must be received during a synchronous preset. Appropriate setup and hold times must be met, as shown in the switching waveform diagram.

An individual asynchronous reset line is provided for each of the 20 flip-flops. Both master and slave halves of the flip-flops are reset when the input signals received force the internal resets high.

22. Security Fuse Usage

A single fuse is provided to prevent unauthorized copying of the ATF750LVC fuse patterns. Once the security fuse is programmed, all fuses will appear programmed during verify.

The security fuse should be programmed last, as its effect is immediate.

**ATF750LVC OUTPUT SOURCE CURRENT
VS. SUPPLY VOLTAGE ($V_{OH} = 2.4V$)**

**ATF750LVC OUTPUT SINK CURRENT
VS. SUPPLY VOLTAGE ($V_{OL} = 0.5V$)**

**ATF750LVC INPUT CURRENT VS. INPUT VOLTAGE
($T_A = 25^\circ C$) WITH PIN KEEPER**

**ATF750LVC INPUT CLAMP CURRENT
VS. INPUT VOLTAGE ($T_A = 25^\circ C$)**

**ATF750LVC SUPPLY CURRENT
VS. SUPPLY VOLTAGE ($T_A = 25^\circ C$)**

**ATF750LVC OUTPUT SOURCE CURRENT
VS. OUTPUT VOLTAGE ($T_A = 25^\circ\text{C}$)**

**ATF750LVC OUTPUT SINK CURRENT VS.
OUTPUT VOLTAGE ($T_A = 25^\circ\text{C}$)**

**ATF750LVC SUPPLY CURRENT
VS. INPUT FREQUENCY ($T_A = 25^\circ\text{C}$)**

**NORMALIZED SUPPLY CURRENT
OVER TEMPERATURE (AT $V_{CC} = 3.3V$ & $5.0V$)**

23. ATF750LVC Ordering Information

23.1 ATF750LVC Green Package Options (Pb/Halide-free/RoHS Compliant)

t_{PD} (ns)	t_{COS} (ns)	Ext. f_{MAXS} (MHz)	Ordering Code	Package	Operation Range
15	10	55	ATF750LVC-15JU ATF750LVC-15PU ATF750LVC-15SU ATF750LVC-15XU ⁽¹⁾	28J 24P3 24S 24X	Industrial (-40°C to 85°C)

Note: 1. Special order only; TSSOP package requires special thermal management.

Package Type	
28J	28-Lead, Plastic J-leaded Chip Carrier (PLCC)
24P3	24-lead, 0.300" Wide, Plastic Dual Inline Package (PDIP)
