What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

NOTES :
1. The numbers in each grid (circle) show the pin numbers of the M30280FAHP (80P6Q-A package)
2. Connect grids written as (Vss) to Vss(GND) or leave them open.
3. Set PACR2 to PACR0 bits in the PACR register to "0112" before you input and output it after resetting to each pin. When the PACR register is not set, the input and output function of some pins are disabled.

3. Memory

Figure 3.1 is a memory map of the M16C/28 Group (M16C/28, M16C/28B). M16C/28 Group provides 1-Mbyte address space from addresses 00000$_{16}$ to FFFFF$_{16}$. The internal ROM is allocated lower addresses beginning with address FFFFF$_{16}$. For example, 64 Kbytes internal ROM is allocated addresses F0000$_{16}$ to FFFFF$_{16}$.

Two 2-Kbyte internal ROM areas, block A and block B, are available in the flash memory version. The blocks are allocated addresses F000$_{16}$ to FFFF$_{16}$.

The fixed interrupt vector tables are allocated addresses FFFDC$_{16}$ to FFFFF$_{16}$. It stores the starting address of each interrupt routine. See the section on interrupts for details.

The internal RAM is allocated higher addresses beginning with address 00400$_{16}$. For example, 4-Kbytes internal RAM is allocated addresses 00400$_{16}$ to 013FF$_{16}$. Besides storing data, it becomes stacks when the subroutine is called or an interrupt is acknowledged.

SFR, consisting of control registers for peripheral functions such as I/O port, A/D converter, serial I/O, timers is allocated addresses 00000$_{16}$ to 003FF$_{16}$. All blank spaces within SFR are reserved and cannot be accessed by users.

The special page vector table is allocated to the addresses FFE00$_{16}$ to FFFDB$_{16}$. This vector is used by the JMPS or JSRS instruction. For details, refer to the ***M16C/60 and M16C/20 Series Software Manual***.
