

Welcome to [E-XFL.COM](#)

### What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

### Applications of "[Embedded - Microcontrollers](#)"

#### Details

|                            |   |
|----------------------------|---|
| Product Status             | Not For New Designs   |
| Core Processor             | M16C/60   |
| Core Size                  | 16-Bit  |
| Speed                      | 20MHz   |
| Connectivity               | I <sup>2</sup> C, IEBus, SIO, UART/USART  |
| Peripherals                | DMA, POR, PWM, Voltage Detect, WDT  |
| Number of I/O              | 55  |
| Program Memory Size        | 48KB (48K x 8)  |
| Program Memory Type        | FLASH   |
| EEPROM Size                | -   |
| RAM Size                   | 4K x 8  |
| Voltage - Supply (Vcc/Vdd) | 2.7V ~ 5.5V   |
| Data Converters            | A/D 13x10b  |
| Oscillator Type            | Internal  |
| Operating Temperature      | -20°C ~ 85°C (TA)   |
| Mounting Type              | Surface Mount   |
| Package / Case             | 64-LQFP   |
| Supplier Device Package    | 64-LFQFP (10x10)  |

## Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: "Standard", "High Quality", and "Specific". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as "Specific" without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as "Specific" or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is "Standard" unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
  - "Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
  - "High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
  - "Specific": Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

## 1. Overview

The M16C/28 Group (M16C/28 and M16C/28B) MCU are single-chip control MCU, fabricated using high-performance silicon gate CMOS technology with the M16C/60 series CPU core. The M16C/28 Group (M16C/28 and M16C/28B) are housed in 64-pin and 80-pin plastic molded LQFP packages and also in 85-pin plastic molded TFLGA (Thin Fine Pitch Land Grid Array) package. With a 1-Mbyte address space, this MCU combines advanced instruction manipulation capabilities to process complex instructions by less bytes and execute instructions at higher speed. It includes a multiplier and DMAC adequate for office automation, communication devices and other high-speed processing applications.

The M16C/28 has Normal-ver., T-ver., and V-ver.. The M16C/28B has Normal-ver. only.

This hardware manual describes the Normal-ver. only. Please contact Renesas Technology Corp. for T-ver./V-ver. information.

### 1.1 Applications

Audio, cameras, office equipment, communication equipment, portable equipment, home appliances (inverter solution), motor control, industrial equipment, etc.

## 1.2 Performance Overview

**Table 1.1** and **1.2** outline performance overview of the M16C/28 Group (M16C/28, M16C/28B).

**Table 1.1 M16C/28 Group (M16C/28, M16C/28B) Performance (80/85-Pin Package)**

|                               | Item                               | Performance  |
|-------------------------------|------------------------------------|--|
| CPU                           | Number of basic instructions       | 91 instructions  |
|                               | Minimum instruction execution time | 41.7 ns (f(BCLK) = 24 MHz, Vcc = 4.2 V to 5.5 V) (M16C/28B)<br>50 ns (f(BCLK) = 20 MHz, Vcc = 3.0 V to 5.5 V) (M16C/28, M16C/28B)<br>100 ns (f(BCLK) = 10 MHz, Vcc = 2.7 V to 5.5 V) (M16C/28, M16C/28B)   |
|                               | Operation mode                     | Single chip mode   |
|                               | Address space                      | 1M bytes   |
|                               | Memory capacity                    | See <b>Table 1.3</b>   |
| Peripheral Function           | I/O port                           | Input/Output : 71 lines  |
|                               | Multifunction timer                | TimerA:16 bits x 5 channels, TimerB:16 bits x 3 channels<br>Three-phase Motor Control Timer<br>TimerS (Input Capture/Output Compare)<br>: 16bit base timer x 1 channel (Input/Output x 8 channels)   |
|                               | Serial I/O                         | 2 channels (UART0, UART1)<br>UART, clock synchronous<br>1 channel (UART2)<br>UART, clock synchronous, I <sup>2</sup> C bus <sup>(1)</sup> , or IEBus <sup>(2)</sup><br>2 channels (SI/O3, SI/O4)<br>Clock synchronous<br>1 channel (Multi-Master I <sup>2</sup> C bus <sup>(1)</sup> ) |
|                               | A/D converter                      | 10 bits x 24 channels  |
|                               | DMAC                               | 2 channels   |
|                               | Watchdog timer                     | 15 bits x 1 (with prescaler)   |
|                               | Interrupt                          | 25 internal and 8 external sources, 4 software sources, 7 levels   |
|                               | Clock generation circuit           | 4 circuits<br>• Main clock (*)<br>• Sub-clock (*)<br>• On-chip oscillator<br>• PLL frequency synthesizer<br>(*) Equipped with a built-in feedback resistor   |
|                               | Oscillation Stop Detect Function   | Main clock oscillation stop, re-oscillation detect function  |
|                               | Voltage detection circuit          | Available  |
| Electrical Characteristics    | Power supply voltage               | Vcc = 4.2 V to 5.5 V (f(BCLK) = 24 MHz) (M16C/28B)<br>Vcc = 3.0 V to 5.5 V (f(BCLK) = 20 MHz) (M16C/28, M16C/28B)<br>Vcc = 2.7 V to 5.5 V (f(BCLK) = 10 MHz) (M16C/28, M16C/28B)   |
|                               | Power consumption                  | 16 mA (Vcc = 5V, f(BCLK) = 20 MHz)<br>25 $\mu$ A (f(XCIN) = 32 KHz on RAM)<br>3.0 $\mu$ A (Vcc = 3V, f(XCIN) = 32 KHz, in wait mode)<br>0.7 $\mu$ A (Vcc = 3V, in stop mode)   |
| Flash Memory                  | Program/erase supply voltage       | 2.7 V to 5.5 V   |
|                               | Program and erase endurance        | 100 times (all space) or 1,000 times (Blocks 0 to 5)<br>/10,000 times (Block A, Block B <sup>(3)</sup> )   |
| Operating Ambient Temperature |                                    | -20 to 85°C/-40 to 85°C <sup>(3)</sup>   |
| Package                       |                                    | 80-pin plastic mold LQFP, 85-pin plastic mold TFLGA  |

**NOTES:**

1. I<sup>2</sup>C bus is a trademark of Koninklijke Philips Electronics N. V.
2. IEBus is a trademark of NEC Electronics Corporation.
3. Refer to **Table 1.5** to **1.7** for number of program/erase.
4. Use PLL frequency synthesizer to use M16C/28B at f(BCLK) = 24 MHz.

## 1.5 Pin Assignment

Figures 1.5 to 1.7 show the pin Assignments (top view).

### NOTES :

1. The numbers in each grid (circle) show the pin numbers of the M30280FAHP (80P6Q-A package)
2. Connect grids written as (Vss) to Vss(GND) or leave them open.
3. Set PACR2 to PACR0 bits in the PACR register to "0112" before you input and output it after resetting to each pin. When the PACR register is not set, the input and output function of some pins are disabled.

Package: PTLG0085JB-A(85F0G)

## 1.6 Pin Description

**Table 1.10 Pin Description (64-Pin, 80-Pin and 85-Pin Packages)**

| Classification                         | Symbol                                     | I/O Type | Function  |
|--|--|----------|---|
| Power Supply                           | VCC, VSS                                   | I        | Apply 2.7 to 5.5V to the VCC pin. Apply 0V to the VSS pin.  |
| Analog Power Supply                    | AVCC<br>AVSS                               | I        | Supplies power to the A/D converter. Connect the AVCC pin to VCC and the AVSS pin to VSS.   |
| Reset Input                            | RESET                                      | I        | The MCU is in a reset state when "L" is applied to the RESET pin  |
| CNVSS                                  | CNVSS                                      | I        | Connect the CNVSS pin to VSS.   |
| Main Clock Input                       | XIN  | I        | I/O pins for the main clock oscillation circuit. Connect a ceramic resonator or crystal oscillator between XIN and XOUT. To apply external clock, apply it to XIN and leave XOUT open. If XIN is not used (for external oscillator or external clock) connect XIN pin to VCC and leave XOUT open. |
| Main Clock Output                      | XOUT                                       | O        |   |
| Sub Clock Input                        | XCIN                                       | I        | I/O pins for the sub clock oscillation circuit. Connect a crystal oscillator between XCIN and XOUT.   |
| Sub Clock Output                       | XCOUT                                      | O        |   |
| INT Interrupt Input                    | INT0 to INT5                               | I        | Input pins for the INT interrupt. INT2 can be used for Timer A Z-phase function.  |
| NMI Interrupt Input                    | NMI  | I        | Input pin for the NMI interrupt. NMI cannot be used as I/O port while the three-phase motor control is enabled. Apply a stable "H" to NMI after setting it's direction register to "0" when the three-phase motor control is enabled.   |
| Key Input Interrupt                    | KI0 to KI3                                 | I        | Input pins for the key input interrupt  |
| Timer A                                | TA0OUT to TA4OUT                           | I/O      | I/O pins for the timer A0 to A4   |
|  | TA0IN to TA4IN                             | I        | Input pins for the timer A0 to A4   |
|  | ZP   | I        | Input pin for Z-phase   |
| Timer B                                | TB0IN to TB2IN                             | I        | Input pins for the timer B0 to B2   |
| Three-phase Motor Control Timer Output | U, $\bar{U}$ , V, $\bar{V}$ , W, $\bar{W}$ | O        | Output pins for the three-phase motor control timer   |
|  | IDU, IDW, IDV, SD                          | I/O      | Input and output pins for the three-phase motor control timer   |
| Serial I/O                             | CTS0 to CTS2                               | I        | Input pins for data transmission control  |
|  | RTS0 to RTS2                               | O        | Output pins for data reception control  |
|  | CLK0 to CLK3                               | I/O      | Inputs and outputs the transfer clock   |
|  | RxD0 to RxD2                               | I        | Inputs serial data  |
|  | TxD0 to TxD2                               | O        | Outputs serial data   |
|  | CLKS1                                      | O        | Output pin for transfer clock   |
| I <sup>2</sup> C Mode                  | SDA2                                       | I/O      | Inputs and outputs serial data  |
|  | SCL2                                       |          | Inputs and outputs the transfer clock   |
| Multi-master I <sup>2</sup> C bus      | SDAMM                                      | I/O      | Inputs and outputs serial data  |
|  | SCLMM                                      |          | Inputs and outputs the transfer clock   |
| Reference Voltage Input                | VREF                                       | I        | Applies reference voltage to the A/D converter  |
| A/D Converter                          | AN0 to AN7<br>AN00 to AN03<br>AN24         | I        | Analog input pins for the A/D converter   |
|  | ADTRG                                      |          | Input pin for an external A/D trigger   |

I : Input    O : Output    I/O : Input and output

## 2. Central Processing Unit (CPU)

**Figure 2.1** shows the CPU registers. The register bank is comprised of 7 registers (R0, R1, R2, R3, A0, A1 and FB) out of 13 CPU registers. Two sets of register banks are provided.

Figure 2.1 Central Processing Unit Register

## 2.1 Data Registers (R0, R1, R2 and R3)

The R0, R1, R2 and R3 registers are 16 bit registers for transfer and arithmetic/logic operations.

The R0 and R1 registers can be split into high-order bits(R0H, R1H) and low-order bits (R0L, R1L) to be used separately as 8-bit data registers. Conversely, R2 and R0 can be combined with R2 to be used as a 32-bit data register (R2R0). The same applies to R1 and R2.

## 2.2 Address Registers (A0 and A1)

The register A0 consists of 16 bits, and is used for address register indirect addressing and address register relative addressing. They also are used for transfers and arithmetic/logic operations. A1 is the same as A0. In some instructions, registers A1 and A0 can be combined for use as a 32-bit address register (A1A0).

### 3. Memory

**Figure 3.1** is a memory map of the M16C/28 Group (M16C/28, M16C/28B). M16C/28 Group provides 1-Mbyte address space from addresses 00000<sub>16</sub> to FFFFF<sub>16</sub>. The internal ROM is allocated lower addresses beginning with address FFFFF<sub>16</sub>. For example, 64 Kbytes internal ROM is allocated addresses F0000<sub>16</sub> to FFFFF<sub>16</sub>.

Two 2-Kbyte internal ROM areas, block A and block B, are available in the flash memory version. The blocks are allocated addresses F000<sub>16</sub> to FFFF<sub>16</sub>.

The fixed interrupt vector tables are allocated addresses FFFDC<sub>16</sub> to FFFFF<sub>16</sub>. It stores the starting address of each interrupt routine. See the section on interrupts for details.

The internal RAM is allocated higher addresses beginning with address 00400<sub>16</sub>. For example, 4-Kbytes internal RAM is allocated addresses 00400<sub>16</sub> to 013FF<sub>16</sub>. Besides storing data, it becomes stacks when the subroutine is called or an interrupt is acknowledged.

SFR, consisting of control registers for peripheral functions such as I/O port, A/D converter, serial I/O, timers is allocated addresses 00000<sub>16</sub> to 003FF<sub>16</sub>. All blank spaces within SFR are reserved and cannot be accessed by users.

The special page vector table is allocated to the addresses FFE00<sub>16</sub> to FFFDB<sub>16</sub>. This vector is used by the JMPS or JSRS instruction. For details, refer to the **M16C/60 and M16C/20 Series Software Manual**.

Keep safety first in your circuit designs!

1. Renesas Technology Corp. puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage. Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of nonflammable material or (iii) prevention against any malfunction or mishap.

Notes regarding these materials

1. These materials are intended as a reference to assist our customers in the selection of the Renesas Technology Corp. product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Renesas Technology Corp. or a third party.
  2. Renesas Technology Corp. assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
  3. All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Renesas Technology Corp. without notice due to product improvements or other reasons. It is therefore recommended that customers contact Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor for the latest product information before purchasing a product listed herein.  
The information described here may contain technical inaccuracies or typographical errors.  
Renesas Technology Corp. assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors.  
Please also pay attention to information published by Renesas Technology Corp. by various means, including the Renesas Technology Corp. Semiconductor home page (<http://www.renesas.com>).
  4. When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Renesas Technology Corp. assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
  5. Renesas Technology Corp. semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
  6. The prior written approval of Renesas Technology Corp. is necessary to reprint or reproduce in whole or in part these materials.
  7. If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.  
Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
  8. Please contact Renesas Technology Corp. for further details on these materials or the products contained therein.
