### Understanding [Embedded - FPGAs \(Field Programmable Gate Array\)](#)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

### Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

#### Details

|                                |                                                                                                                                                                   |
|--------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Product Status                 | Active                                                                                                                                                            |
| Number of LABs/CLBs            | -                                                                                                                                                                 |
| Number of Logic Elements/Cells | -                                                                                                                                                                 |
| Total RAM Bits                 | 2560                                                                                                                                                              |
| Number of I/O                  | 176                                                                                                                                                               |
| Number of Gates                | 54000                                                                                                                                                             |
| Voltage - Supply               | 3V ~ 3.6V, 4.5V ~ 5.5V                                                                                                                                            |

## 3 40MX and 42MX FPGAs

---

### 3.1 General Description

Microsemi's 40MX and 42MX families offer a cost-effective design solution at 5V. The MX devices are single-chip solutions and provide high performance while shortening the system design and development cycle. MX devices can integrate and consolidate logic implemented in multiple PALs, CPLDs, and FPGAs. Example applications include high-speed controllers and address decoding, peripheral bus interfaces, DSP, and co-processor functions.

The MX device architecture is based on Microsemi's patented antifuse technology implemented in a 0.45µm triple-metal CMOS process. With capacities ranging from 3,000 to 54,000 system gates, the MX devices provide performance up to 250 MHz, are live on power-up and have one-fifth the standby power consumption of comparable FPGAs. MX FPGAs provide up to 202 user I/Os and are available in a wide variety of packages and speed grades.

A42MX24 and A42MX36 devices also feature multiPlex I/Os, which support mixed-voltage systems, enable programmable PCI, deliver high-performance operation at both 5.0V and 3.3V, and provide a low-power mode. The devices are fully compliant with the PCI local bus specification (version 2.1). They deliver 200 MHz on-chip operation and 6.1 ns clock-to-output performance.

The 42MX24 and 42MX36 devices include system-level features such as IEEE Standard 1149.1 (JTAG) Boundary Scan Testing and fast wide-decode modules. In addition, the A42MX36 device offers dual-port SRAM for implementing fast FIFOs, LIFOs, and temporary data storage. The storage elements can efficiently address applications requiring wide data path manipulation and can perform transformation functions such as those required for telecommunications, networking, and DSP.

All MX devices are fully tested over automotive and military temperature ranges. In addition, the largest member of the family, the A42MX36, is available in both CQ208 and CQ256 ceramic packages screened to MIL-STD-883 levels. For easy prototyping and conversion from plastic to ceramic, the CQ208 and PQ208 devices are pin-compatible.

### 3.2 MX Architectural Overview

The MX devices are composed of fine-grained building blocks that enable fast, efficient logic designs. All devices within these families are composed of logic modules, I/O modules, routing resources and clock networks, which are the building blocks for fast logic designs. In addition, the A42MX36 device contains embedded dual-port SRAM modules, which are optimized for high-speed data path functions such as FIFOs, LIFOs and scratch pad memory. A42MX24 and A42MX36 also contain wide-decode modules.

#### 3.2.1 Logic Modules

The 40MX logic module is an eight-input, one-output logic circuit designed to implement a wide range of logic functions with efficient use of interconnect routing resources.(see the following figure).

The logic module can implement the four basic logic functions (NAND, AND, OR and NOR) in gates of two, three, or four inputs. The logic module can also implement a variety of D-latches, exclusivity functions, AND-ORs and OR-ANDs. No dedicated hard-wired latches or flip-flops are required in the array; latches and flip-flops can be constructed from logic modules whenever required in the application.

**Figure 5 • A42MX24 and A42MX36 D-Module Implementation****Figure 6 • A42MX36 Dual-Port SRAM Block**

### 3.2.3 Routing Structure

The MX architecture uses vertical and horizontal routing tracks to interconnect the various logic and I/O modules. These routing tracks are metal interconnects that may be continuous or split into segments. Varying segment lengths allow the interconnect of over 90% of design tracks to occur with only two antifuse connections. Segments can be joined together at the ends using antifuses to increase their lengths up to the full length of the track. All interconnects can be accomplished with a maximum of four antifuses.

#### 3.2.3.1 Horizontal Routing

Horizontal routing tracks span the whole row length or are divided into multiple segments and are located in between the rows of modules. Any segment that spans more than one-third of the row length is considered a long horizontal segment. A typical channel is shown in Figure 7, page 10. Within horizontal routing, dedicated routing tracks are used for global clock networks and for power and ground tie-off tracks. Non-dedicated tracks are used for signal nets.

#### 3.2.3.2 Vertical Routing

Another set of routing tracks run vertically through the module. There are three types of vertical tracks: input, output, and long. Long tracks span the column length of the module, and can be divided into multiple segments. Each segment in an input track is dedicated to the input of a particular module; each segment in an output track is dedicated to the output of a particular module. Long segments are uncommitted and can be assigned during routing.

Each output segment spans four channels (two above and two below), except near the top and bottom of the array, where edge effects occur. Long vertical tracks contain either one or two segments. An example of vertical routing tracks and segments is shown in Figure 7, page 10.

Additionally, the back-annotation flow is compatible with all the major simulators and the simulation results can be cross-probed with Silicon Explorer II, Microsemi's integrated verification and logic analysis tool. Another tool included in the Libero software is the SmartGen macro builder, which easily creates popular and commonly used logic functions for implementation into your schematic or HDL design.

Microsemi's Libero software is compatible with the most popular FPGA design entry and verification tools from companies such as Mentor Graphics, Synopsys, and Cadence design systems.

See the Libero IDE web content at [www.microsemi.com/soc/products/software/libero/default.aspx](http://www.microsemi.com/soc/products/software/libero/default.aspx) for further information on licensing and current operating system support.

## 3.7 5.0 V Operating Conditions

The following tables show 5.0 V operating conditions.

**Table 12 • Absolute Maximum Ratings for 40MX Devices\***

| Symbol           | Parameter           | Limits          | Units |
|------------------|---------------------|-----------------|-------|
| VCC              | DC Supply Voltage   | –0.5 to +7.0    | V     |
| VI               | Input Voltage       | –0.5 to VCC+0.5 | V     |
| VO               | Output Voltage      | –0.5 to VCC+0.5 | V     |
| t <sub>STG</sub> | Storage Temperature | –65 to +150     | °C    |

**Note:** \*Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. Exposure to absolute maximum rated conditions for extended periods may affect device reliability. Devices should not be operated outside the recommended operating conditions.

**Table 13 • Absolute Maximum Ratings for 42MX Devices\***

| Symbol           | Parameter                   | Limits           | Units |
|------------------|-----------------------------|------------------|-------|
| VCCI             | DC Supply Voltage for I/Os  | –0.5 to +7.0     | V     |
| VCCA             | DC Supply Voltage for Array | –0.5 to +7.0     | V     |
| VI               | Input Voltage               | –0.5 to VCCI+0.5 | V     |
| VO               | Output Voltage              | –0.5 to VCCI+0.5 | V     |
| t <sub>STG</sub> | Storage Temperature         | –65 to +150      | °C    |

3. All outputs unloaded. All inputs = VCC/VCCI or GND

## 3.8 3.3 V Operating Conditions

The following table shows 3.3 V operating conditions.

**Table 16 • Absolute Maximum Ratings for 40MX Devices\***

| Symbol           | Parameter           | Limits            | Units |
|------------------|---------------------|-------------------|-------|
| VCC              | DC Supply Voltage   | –0.5 to +7.0      | V     |
| VI               | Input Voltage       | –0.5 to VCC + 0.5 | V     |
| VO               | Output Voltage      | –0.5 to VCC + 0.5 | V     |
| t <sub>STG</sub> | Storage Temperature | –65 to +150       | °C    |

**Note:** \*Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. Exposure to absolute maximum rated conditions for extended periods may affect device reliability. Devices should not be operated outside the recommended operating conditions.

**Table 17 • Absolute Maximum Ratings for 42MX Devices\***

| Symbol           | Parameter                   | Limits           | Units |
|------------------|-----------------------------|------------------|-------|
| VCCI             | DC Supply Voltage for I/Os  | –0.5 to +7.0     | V     |
| VCCA             | DC Supply Voltage for Array | –0.5 to +7.0     | V     |
| VI               | Input Voltage               | –0.5 to VCCI+0.5 | V     |
| VO               | Output Voltage              | –0.5 to VCCI+0.5 | V     |
| t <sub>STG</sub> | Storage Temperature         | –65 to +150      | °C    |

**Note:** \*Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. Exposure to absolute maximum rated conditions for extended periods may affect device reliability. Devices should not be operated outside the recommended operating conditions.

**Table 18 • Recommended Operating Conditions**

| Parameter          | Commercial | Industrial | Military    | Units |
|--------------------|------------|------------|-------------|-------|
| Temperature Range* | 0 to +70   | –40 to +85 | –55 to +125 | °C    |
| VCC (40MX)         | 3.0 to 3.6 | 3.0 to 3.6 | 3.0 to 3.6  | V     |
| VCCA (42MX)        | 3.0 to 3.6 | 3.0 to 3.6 | 3.0 to 3.6  | V     |
| VCCI (42MX)        | 3.0 to 3.6 | 3.0 to 3.6 | 3.0 to 3.6  | V     |

**Note:** \*Ambient temperature (T<sub>A</sub>) is used for commercial and industrial grades; case temperature (T<sub>C</sub>) is used for military grades.

All the following tables show various specifications and operating conditions of 40MX and 42MX FPGAs.

### 3.8.1 3.3 V LVTTTL Electrical Specifications

**Table 19 • 3.3V LVTTTL Electrical Specifications**

| I/O, I/O source sink current                             | Can be derived from the <i>IBIS model</i> ( <a href="http://www.microsemi.com/soc/techdocs/models/ibis.html">http://www.microsemi.com/soc/techdocs/models/ibis.html</a> ) |            |            |               |            |            |            |          |            |       |

1. Only one output tested at a time. VCC/VCCI = min.
2. All outputs unloaded. All inputs = VCC/VCCI or GND.

## 3.9 Mixed 5.0 V / 3.3 V Operating Conditions (for 42MX Devices Only)

**Table 20 • Absolute Maximum Ratings\***

| Symbol           | Parameter                   | Limits             | Units |
|------------------|-----------------------------|--------------------|-------|
| VCCI             | DC Supply Voltage for I/Os  | -0.5 to +7.0       | V     |
| VCCA             | DC Supply Voltage for Array | -0.5 to +7.0       | V     |
| VI               | Input Voltage               | -0.5 to VCCA + 0.5 | V     |
| VO               | Output Voltage              | -0.5 to VCCI + 0.5 | V     |
| t <sub>STG</sub> | Storage Temperature         | -65 to +150        | °C    |

**Note:** \*Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. Exposure to absolute maximum rated conditions for extended periods may affect device

**Table 23 • DC Specification (5.0 V PCI Signaling)<sup>1</sup>**

| Symbol           | Parameter             | Condition | PCI  |      | MX   |                     | Units |
|------------------|-----------------------|-----------|------|------|------|---------------------|-------|
|                  |                       |           | Min. | Max. | Min. | Max.                |       |
| C <sub>IN</sub>  | Input Pin Capacitance |           |      | 10   | —    | 10                  | pF    |
| C <sub>CLK</sub> | CLK Pin Capacitance   |           | 5    | 12   | —    | 10                  | pF    |
| L <sub>PIN</sub> | Pin Inductance        |           |      | 20   | —    | < 8 nH <sup>4</sup> | nH    |

1. PCI Local Bus Specification, Version 2.1, Section 4.2.1.1.

2. Maximum rating for VCCI –0.5 V to 7.0 V

3. VIH(Min) is 2.4V for A42MX36 family. This applies only to VCCI of 5V and is not applicable to VCCI of 3.3V.

4. Dependent upon the chosen package. PCI recommends QFP and BGA packaging to reduce pin inductance and capacitance.

**Table 24 • AC Specifications (5.0V PCI Signaling)\***

| Symbol   | Parameter             | Condition             | PCI                          |      | MX   |      | Units |
|----------|-----------------------|-----------------------|------------------------------|------|------|------|-------|
|          |                       |                       | Min.                         | Max. | Min. | Max. |       |
| ICL      | Low Clamp Current     | $-5 < V_{IN} \leq -1$ | $-25 + (V_{IN} + 1) / 0.015$ |      | –60  | –10  | mA    |
| Slew (r) | Output Rise Slew Rate | 0.4 V to 2.4 V load   | 1                            | 5    | 1.8  | 2.8  | V/ns  |
| Slew (f) | Output Fall Slew Rate | 2.4 V to 0.4 V load   | 1                            | 5    | 2.8  | 4.3  | V/ns  |

**Note:** \*PCI Local Bus Specification, Version 2.1, Section 4.2.1.2.

**Table 31 • 40MX Temperature and Voltage Derating Factors (Normalized to T<sub>J</sub> = 25°C, V<sub>CC</sub> = 3.3 V)**

| 40MX Voltage | Temperature |       |      |      |      |      |       |
|--------------|-------------|-------|------|------|------|------|-------|
|              | -55°C       | -40°C | 0°C  | 25°C | 70°C | 85°C | 125°C |
| 3.60         | 0.83        | 0.85  | 0.92 | 0.96 | 1.14 | 1.25 | 1.53  |

**Figure 37 • 40MX Junction Temperature and Voltage Derating Curves (Normalized to T<sub>J</sub> = 25°C, V<sub>CC</sub> = 3.3 V)**

**Note:** This derating factor applies to all routing and propagation delays

### 3.11.5 PCI System Timing Specification

The following tables list the critical PCI timing parameters and the corresponding timing parameters for the MX PCI-compliant devices.

### 3.11.6 PCI Models

Microsemi provides synthesizable VHDL and Verilog-HDL models for a PCI Target interface, a PCI Target and Target+DMA Master interface. Contact the Microsemi sales representative for more details.

**Table 32 • Clock Specification for 33 MHz PCI**

| Symbol            | Parameter      | PCI  |      | A42MX24 |      | A42MX36 |      | Units |
|-------------------|----------------|------|------|---------|------|---------|------|-------|
|                   |                | Min. | Max. | Min.    | Max. | Min.    | Max. |       |
| t <sub>CYC</sub>  | CLK Cycle Time | 30   | –    | 4.0     | –    | 4.0     | –    | ns    |
