

Welcome to [E-XFL.COM](#)

Understanding **Embedded - FPGAs (Field Programmable Gate Array)**

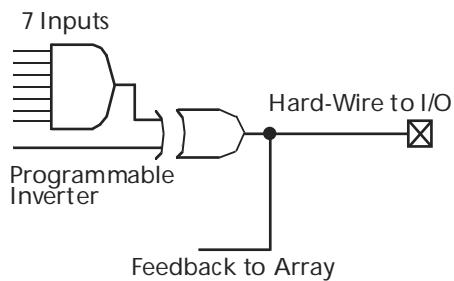

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Details

| | |
|--------------------------------|---|
| Product Status | Active |
| Number of LABs/CLBs | - |
| Number of Logic Elements/Cells | - |
| Total RAM Bits | - |
| Number of I/O | 57 |
| Number of Gates | 6000 |
| Voltage - Supply | 3V ~ 3.6V, 4.5V ~ 5.5V |
| Mounting Type | Surface Mount |
| Operating Temperature | -55°C ~ 125°C (TC) |
| Package / Case | 68-LCC (J-Lead) |
| Supplier Device Package | 68-PLCC (24.23x24.23) |
| Purchase URL | https://www.e-xfl.com/product-detail/microchip-technology/a40mx04-1plg68m |

3.2.3 Routing Structure

The MX architecture uses vertical and horizontal routing tracks to interconnect the various logic and I/O modules. These routing tracks are metal interconnects that may be continuous or split into segments. Varying segment lengths allow the interconnect of over 90% of design tracks to occur with only two antifuse connections. Segments can be joined together at the ends using antifuses to increase their lengths up to the full length of the track. All interconnects can be accomplished with a maximum of four antifuses.

3.2.3.1 Horizontal Routing

Horizontal routing tracks span the whole row length or are divided into multiple segments and are located in between the rows of modules. Any segment that spans more than one-third of the row length is considered a long horizontal segment. A typical channel is shown in Figure 7, page 10. Within horizontal routing, dedicated routing tracks are used for global clock networks and for power and ground tie-off tracks. Non-dedicated tracks are used for signal nets.

3.2.3.2 Vertical Routing

Another set of routing tracks run vertically through the module. There are three types of vertical tracks: input, output, and long. Long tracks span the column length of the module, and can be divided into multiple segments. Each segment in an input track is dedicated to the input of a particular module; each segment in an output track is dedicated to the output of a particular module. Long segments are uncommitted and can be assigned during routing.

Each output segment spans four channels (two above and two below), except near the top and bottom of the array, where edge effects occur. Long vertical tracks contain either one or two segments. An example of vertical routing tracks and segments is shown in Figure 7, page 10.

3. All outputs unloaded. All inputs = VCC/VCCI or GND

3.8 3.3 V Operating Conditions

The following table shows 3.3 V operating conditions.

Table 16 • Absolute Maximum Ratings for 40MX Devices*

| Symbol | Parameter | Limits | Units |
|------------------|---------------------|-------------------|-------|
| VCC | DC Supply Voltage | -0.5 to +7.0 | V |
| VI | Input Voltage | -0.5 to VCC + 0.5 | V |
| VO | Output Voltage | -0.5 to VCC + 0.5 | V |
| t _{STG} | Storage Temperature | -65 to + 150 | °C |

Note: *Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. Exposure to absolute maximum rated conditions for extended periods may affect device reliability. Devices should not be operated outside the recommended operating conditions.

Table 17 • Absolute Maximum Ratings for 42MX Devices*

| Symbol | Parameter | Limits | Units |
|------------------|-----------------------------|------------------|-------|
| VCCI | DC Supply Voltage for I/Os | -0.5 to +7.0 | V |
| VCCA | DC Supply Voltage for Array | -0.5 to +7.0 | V |
| VI | Input Voltage | -0.5 to VCCI+0.5 | V |
| VO | Output Voltage | -0.5 to VCCI+0.5 | V |
| t _{STG} | Storage Temperature | -65 to +150 | °C |

Note: *Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. Exposure to absolute maximum rated conditions for extended periods may affect device reliability. Devices should not be operated outside the recommended operating conditions.

Table 18 • Recommended Operating Conditions

| Parameter | Commercial | Industrial | Military | Units |
|--------------------|------------|------------|-------------|-------|
| Temperature Range* | 0 to +70 | -40 to +85 | -55 to +125 | °C |
| VCC (40MX) | 3.0 to 3.6 | 3.0 to 3.6 | 3.0 to 3.6 | V |
| VCCA (42MX) | 3.0 to 3.6 | 3.0 to 3.6 | 3.0 to 3.6 | V |
| VCCI (42MX) | 3.0 to 3.6 | 3.0 to 3.6 | 3.0 to 3.6 | V |

Note: *Ambient temperature (T_A) is used for commercial and industrial grades; case temperature (T_C) is used for military grades.

All the following tables show various specifications and operating conditions of 40MX and 42MX FPGAs.

A sample calculation of the absolute maximum power dissipation allowed for a TQ176 package at commercial temperature and still air is given in the following equation

$$\text{MaximumPowerAllowed} = \frac{\text{Max} \cdot \text{junction temp} \cdot (\text{°C}) - \text{Max} \cdot \text{ambient temp} \cdot (\text{°C})}{\theta_{ja}(\text{°C/W})} = \frac{150\text{°C} - 70\text{°C}}{(28\text{°C})/\text{W}} = 2.86\text{W}$$

EQ 5

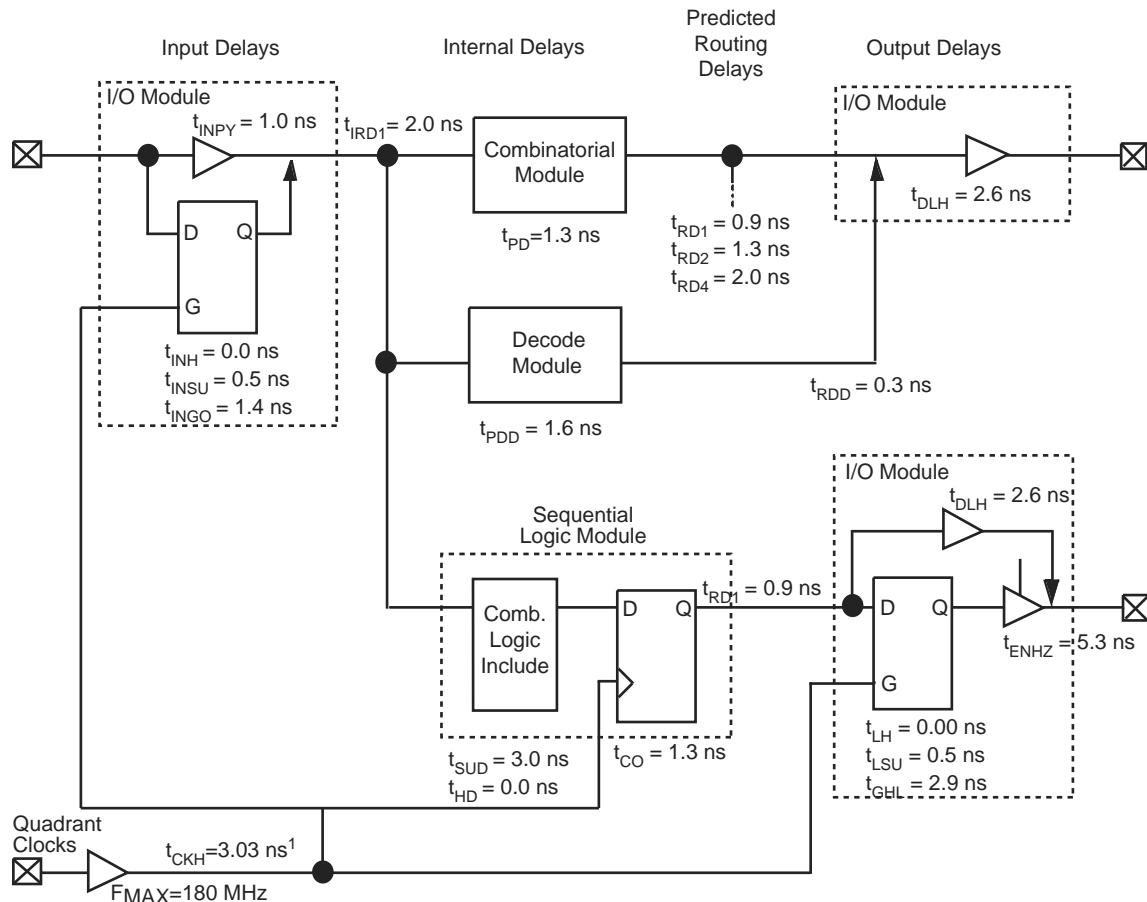

The maximum power dissipation for military-grade devices is a function of θ_{jc} . A sample calculation of the absolute maximum power dissipation allowed for CQFP 208-pin package at military temperature and still air is given in the following equation

$$\text{MaximumPowerAllowed} = \frac{\text{Max} \cdot \text{junction temp} \cdot (\text{°C}) - \text{Max} \cdot \text{ambient temp} \cdot (\text{°C})}{\theta_{jc}(\text{°C/W})} = \frac{150\text{°C} - 125\text{°C}}{(6.3\text{°C})/\text{W}} = 3.97\text{W}$$

EQ 6

Table 27 • Package Thermal Characteristics

| Plastic Packages | Pin Count | θ_{jc} | θ_{ja} | | | Units |
|----------------------------------|------------------|---------------|------------------|--------------------------------|--------------------------------|--------------|
| | | | Still Air | 1.0 m/s 200 ft/min. | 2.5 m/s 500 ft/min. | |
