

Welcome to [E-XFL.COM](#)

Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Details

Product Status	Active
Number of LABs/CLBs	-
Number of Logic Elements/Cells	-
Total RAM Bits	-
Number of I/O	69
Number of Gates	6000
Voltage - Supply	3V ~ 3.6V, 4.75V ~ 5.25V
Mounting Type	Surface Mount
Operating Temperature	0°C ~ 70°C (TA)
Package / Case	100-BQFP
Supplier Device Package	100-PQFP (20x14)
Purchase URL	https://www.e-xfl.com/product-detail/microchip-technology/a40mx04-2pqqg100

Figure 51	BG272	145

Figure 53	CQ172	158

1 Revision History

The revision history describes the changes that were implemented in the document. The changes are listed by revision, starting with the most current publication.

1.1 Revision 15.0

The following is a summary of the changes in revision 15.0 of this document.

- Table 15, page 21 is edited to add the footnote, VIH(Min) is 2.4V for A42MX36 family. This applies only to VCCI of 5V and is not applicable to VCCI of 3.3V
- Table 22, page 25 is edited to add the footnote, VIH(Min) is 2.4V for A42MX36 family. This applies only to VCCI of 5V and is not applicable to VCCI of 3.3V
- Table 23, page 25 is edited to add the footnote, VIH(Min) is 2.4V for A42MX36 family. This applies only to VCCI of 5V and is not applicable to VCCI of 3.3V

1.2 Revision 14.0

The following is a summary of the changes in revision 14.0 of this document.

- Added CQFP package information for A42MX16 device in Product Profile, page 1 and Ceramic Device Resources, page 4 (SAR 79522).
- Added Military (M) and MIL-STD-883 Class B (B) grades for CPGA 132 Package and added Commercial (C), Military (M), and MIL-STD-883 Class B (B) grades for CQFP 172 Package in Temperature Grade Offerings, page 5 (SAR 79519)
- Changed Silicon Sculptor II to Silicon Sculptor in Programming, page 12 (SAR 38754)
- Added Figure 53, page 158 CQ172 package (SAR 79522).

1.3 Revision 13.0

The following is a summary of the changes in revision 13.0 of this document.

- Added Figure 42, page 97 PQ144 Package for A42MX09 device (SAR 69776)
- Added Figure 52, page 153 PQ132 Package for A42MX09 device (SAR 69776)

1.4 Revision 12.0

The following is a summary of the changes in revision 12.0 of this document.

- Added information on power-up behavior for A42MX24 and A42MX36 devices to the Power Supply, page 13 (SAR 42096)
- Corrected the inadvertent mistake in the naming of the PL68 pin assignment table (SARs 48999, 49793)

1.5 Revision 11.0

The following is a summary of the changes in revision 11.0 of this document.

- The FuseLock logo and accompanying text was removed from the User Security, page 12. This marking is no longer used on Microsemi devices (PCN 0915)
- The Development Tool Support, page 19 was updated (SAR 38512)

1.6 Revision 10.0

The following is a summary of the changes in revision 10.0 of this document.

- Ordering Information, page 3 was updated to include lead-free package ordering codes (SAR 21968)
- The User Security, page 12 was revised to clarify that although no existing security measures can give an absolute guarantee, Microsemi FPGAs implement the best security available in the industry (SAR 34673)

2 40MX and 42MX FPGA Families

2.1 Features

The following sections list out various features of the 40MX and 42MX FPGA family devices.

2.1.1 High Capacity

- Single-Chip ASIC Alternative
- 3,000 to 54,000 System Gates
- Up to 2.5 kbits Configurable Dual-Port SRAM
- Fast Wide-Decode Circuitry
- Up to 202 User-Programmable I/O Pins

2.1.2 High Performance

- 5.6 ns Clock-to-Out
- 250 MHz Performance
- 5 ns Dual-Port SRAM Access
- 100 MHz FIFOs
- 7.5 ns 35-Bit Address Decode

2.1.3 HiRel Features

- Commercial, Industrial, Automotive, and Military Temperature Plastic Packages
- Commercial, Military Temperature, and MIL-STD-883 Ceramic Packages
- QML Certification
- Ceramic Devices Available to DSCC SMD

2.1.4 Ease of Integration

- Mixed-Voltage Operation (5.0 V or 3.3 V for core and I/Os), with PCI-Compliant I/Os
- Up to 100% Resource Utilization and 100% Pin Locking
- Deterministic, User-Controllable Timing
- Unique In-System Diagnostic and Verification Capability with Silicon Explorer II
- Low Power Consumption
- IEEE Standard 1149.1 (JTAG) Boundary Scan Testing

2.2 Product Profile

The following table gives the features of the products.

Table 1 • Product profile

Device	A40MX02	A40MX04	A42MX09	A42MX16	A42MX24	A42MX36
Capacity						
System Gates	3,000	6,000	14,000	24,000	36,000	54,000
SRAM Bits	—	—	—	—	—	2,560
Logic Modules						
Sequential	—	—	348	624	954	1,230
Combinatorial	295	547	336	608	912	1,184
Decode	—	—	—	—	24	24
Clock-to-Out						
	9.5 ns	9.5 ns	5.6 ns	6.1 ns	6.1 ns	6.3 ns
SRAM Modules (64x4 or 32x8)						
	—	—	—	—	—	10
Dedicated Flip-Flops						
	—	—	348	624	954	1,230

Designer software development tools provide a design library of I/O macro functions that can implement all I/O configurations supported by the MX FPGAs.

Figure 10 • 42MX I/O Module

Note: *Can be configured as a Latch or D Flip-Flop (Using C-Module)

Figure 11 • PCI Output Structure of A42MX24 and A42MX36 Devices

3.3 Other Architectural Features

The following sections cover other architectural features of 40MX and 42MX FPGAs.

3.3.1 Performance

MX devices can operate with internal clock frequencies of 250 MHz, enabling fast execution of complex logic functions. MX devices are live on power-up and do not require auxiliary configuration devices and thus are an optimal platform to integrate the functionality contained in multiple programmable logic devices. In addition, designs that previously would have required a gate array to meet performance can be integrated into an MX device with improvements in cost and time-to-market. Using timing-driven place-and-route (TDPR) tools, designers can achieve highly deterministic device performance.

3.3.2 User Security

Microsemi FuseLock provides robust security against design theft. Special security fuses are hidden in the fabric of the device and protect against unauthorized users attempting to access the programming and/or probe interfaces. It is virtually impossible to identify or bypass these fuses without damaging the device, making Microsemi antifuse FPGAs protected with the highest level of security available from both invasive and noninvasive attacks.

Special security fuses in 40MX devices include the Probe Fuse and Program Fuse. The former disables the probing circuitry while the latter prohibits further programming of all fuses, including the Probe Fuse. In 42MX devices, there is the Security Fuse which, when programmed, both disables the probing circuitry and prohibits further programming of the device.

3.3.3 Programming

Device programming is supported through the Silicon Sculptor series of programmers. Silicon Sculptor is a compact, robust, single-site and multi-site device programmer for the PC. With standalone software, Silicon Sculptor is designed to allow concurrent programming of multiple units from the same PC.

3.4.9 JTAG Mode Activation

The JTAG test logic circuit is activated in the Designer software by selecting **Tools > Device Selection**. This brings up the Device Selection dialog box as shown in the following figure. The JTAG test logic circuit can be enabled by clicking the “Reserve JTAG Pins” check box. The following table explains the pins’ behavior in either mode.

Figure 15 • Device Selection Wizard

Table 11 • Boundary Scan Pin Configuration and Functionality

Reserve JTAG	Checked	Unchecked
TCK	BST input; must be terminated to logical HIGH or LOW to avoid floating	User I/O
TDI, TMS	BST input; may float or be tied to HIGH	User I/O
TDO	BST output; may float or be connected to TDI of another device	User I/O

3.4.10 TRST Pin and TAP Controller Reset

An active reset (TRST) pin is not supported; however, MX devices contain power-on circuitry that resets the boundary scan circuitry upon power-up. Also, the TMS pin is equipped with an internal pull-up resistor. This allows the TAP controller to remain in or return to the Test-Logic-Reset state when there is no input or when a logical 1 is on the TMS pin. To reset the controller, TMS must be HIGH for at least five TCK cycles.

3.4.11 Boundary Scan Description Language (BSDL) File

Conforming to the IEEE Standard 1149.1 requires that the operation of the various JTAG components be documented. The BSDL file provides the standard format to describe the JTAG components that can be used by automatic test equipment software. The file includes the instructions that are supported, instruction bit pattern, and the boundary-scan chain order. For an in-depth discussion on BSDL files, see the *BSDL Files Format Description* application note.

BSDL files are grouped into two categories - generic and device-specific. The generic files assign all user I/Os as inouts. Device-specific files assign user I/Os as inputs, outputs or inouts.

Generic files for MX devices are available on the Microsemi SoC Product Group's website:

<http://www.microsemi.com/soc/techdocs/models/bsdl.html>.

3.5 Development Tool Support

The MX family of FPGAs is fully supported by Libero® Integrated Design Environment (IDE). Libero IDE is a design management environment, seamlessly integrating design tools while guiding the user through the design flow, managing all design and log files, and passing necessary design data among tools.

Libero IDE allows users to integrate both schematic and HDL synthesis into a single flow and verify the entire design in a single environment. Libero IDE includes SynplifyPro from Synopsys, ModelSim® HDL Simulator from Mentor Graphics® and Viewdraw.

Libero IDE includes place-and-route and provides a comprehensive suite of backend support tools for FPGA development, including timing-driven place-and-route, and a world-class integrated static timing analyzer and constraints editor.

3.10.2 Sequential Module Timing Characteristics

The following figure shows sequential module timing characteristics.

Figure 25 • Flip-Flops and Latches

Note: *D represents all data functions involving A, B, and S for multiplexed flip-flops.

3.10.3 Sequential Timing Characteristics

The following figures show sequential timing characteristics.

Figure 26 • Input Buffer Latches

Table 38 • A42MX09 Timing Characteristics (Nominal 5.0 V Operation) (continued)(Worst-Case Commercial Conditions, VCCA = 4.75 V, TJ = 70°C)

Parameter / Description	-3 Speed		-2 Speed		-1 Speed		Std Speed		-F Speed		Units
	Min.	Max.	Min.	Max.	Min.	Max.	Min.	Max.	Min.	Max.	
CMOS Output Module Timing⁵											
t _{DLH}	Data-to-Pad HIGH		2.4		2.7		3.1		3.6		5.1 ns
t _{DHL}	Data-to-Pad LOW		2.9		3.2		3.6		4.3		6.0 ns
t _{ENZH}	Enable Pad Z to HIGH		2.7		2.9		3.3		3.9		5.5 ns
t _{ENZL}	Enable Pad Z to LOW		2.9		3.2		3.7		4.3		6.1 ns
t _{ENHZ}	Enable Pad HIGH to Z		4.9		5.4		6.2		7.3		10.2 ns
t _{ENLZ}	Enable Pad LOW to Z		5.3		5.9		6.7		7.9		11.1 ns
t _{GLH}	G-to-Pad HIGH		4.2		4.6		5.2		6.1		8.6 ns
t _{GHL}	G-to-Pad LOW		4.2		4.6		5.2		6.1		8.6 ns
t _{LSU}	I/O Latch Set-Up	0.5		0.5		0.6		0.7		1.0	ns
t _{LH}	I/O Latch Hold	0.0		0.0		0.0		0.0		0.0	ns
t _{LCO}	I/O Latch Clock-to-Out (Pad-to-Pad), 64 Clock Loading		5.2		5.8		6.6		7.7		10.8 ns
t _{ACO}	Array Clock-to-Out (Pad-to-Pad), 64 Clock Loading		7.4		8.2		9.3		10.9		15.3 ns
d _{TLH}	Capacity Loading, LOW to HIGH	0.03		0.03		0.03		0.04		0.06	ns/pF
d _{THL}	Capacity Loading, HIGH to LOW	0.04		0.04		0.04		0.05		0.07	ns/pF

- For dual-module macros, use $t_{PD1} + t_{RD1} + t_{PDn}$, $t_{CO} + t_{RD1} + t_{PDn}$, or $t_{PD1} + t_{RD1} + t_{SUD}$, whichever is appropriate.
- Routing delays are for typical designs across worst-case operating conditions. These parameters should be used for estimating device performance. Post-route timing analysis or simulation is required to determine actual performance.
- Data applies to macros based on the S-module. Timing parameters for sequential macros constructed from C-modules can be obtained from the Timer utility.
- Set-up and hold timing parameters for the input buffer latch are defined with respect to the PAD and the D input. External setup/hold timing parameters must account for delay from an external PAD signal to the G inputs. Delay from an external PAD signal to the G input subtracts (adds) to the internal setup (hold) time.
- Delays based on 35 pF loading

Table 39 • A42MX09 Timing Characteristics (Nominal 3.3 V Operation) (Worst-Case Commercial Conditions, VCCA = 3.0 V, TJ = 70°C)

1. For dual-module macros, use t_{PD1} + t_{RD1} + t_{PDn}, t_{CO} + t_{RD1} + t_{PDn}, or t_{PD1} + t_{RD1} + t_{SUD}, whichever is appropriate.
2. Routing delays are for typical designs across worst-case operating conditions. These parameters should be used for estimating device performance. Post-route timing analysis or simulation is required to determine actual performance.
3. Data applies to macros based on the S-module. Timing parameters for sequential macros constructed from C-modules can be obtained from the Timer utility.
4. *Set-up and hold timing parameters for the Input Buffer Latch are defined with respect to the PAD and the D input. External setup/hold timing parameters must account for delay from an external PAD signal to the G inputs. Delay from an external PAD signal to the G input subtracts (adds) to the internal setup (hold) time.*
5. Delays based on 35 pF loading.

3.12 Pin Descriptions

This section lists the pin descriptions for 40MX and 42MX series FPGAs.

CLK/A/B, I/O Global Clock

Clock inputs for clock distribution networks. CLK is for 40MX while CLKA and CLKB are for 42MX devices. The clock input is buffered prior to clocking the logic modules. This pin can also be used as an I/O.

DCLK, I/O Diagnostic Clock

Clock input for diagnostic probe and device programming. DCLK is active when the MODE pin is HIGH. This pin functions as an I/O when the MODE pin is LOW.

GND, Ground

Input LOW supply voltage.

I/O, Input/Output
