### Understanding [Embedded - FPGAs \(Field Programmable Gate Array\)](#)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

### Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

#### Details

**Figure 8 • Clock Networks of 42MX Devices****Figure 9 • Quadrant Clock Network of A42MX36 Devices**

**Note:** \*QCLK1IN, QCLK2IN, QCLK3IN, and QCLK4IN are internally-generated signals.

### 3.2.5 MultiPlex I/O Modules

42MX devices feature Multiplex I/Os and support 5.0 V, 3.3 V, and mixed 3.3 V/5.0 V operations.

The MultiPlex I/O modules provide the interface between the device pins and the logic array. Figure 10, page 12 is a block diagram of the 42MX I/O module. A variety of user functions, determined by a library macro selection, can be implemented in the module. (See the *Antifuse Macro Library Guide* for more information.) All 42MX I/O modules contain tristate buffers, with input and output latches that can be configured for input, output, or bidirectional operation.

All 42MX devices contain flexible I/O structures, where each output pin has a dedicated output-enable control (Figure 10, page 12). The I/O module can be used to latch input or output data, or both, providing fast set-up time. In addition, the Designer software tools can build a D-type flip-flop using a C-module combined with an I/O module to register input and output signals. See the *Antifuse Macro Library Guide* for more details.

A42MX24 and A42MX36 devices also offer selectable PCI output drives, enabling 100% compliance with version 2.1 of the PCI specification. For low-power systems, all inputs and outputs are turned off to reduce current consumption to below 500  $\mu$ A.

To achieve 5.0 V or 3.3 V PCI-compliant output drives on A42MX24 and A42MX36 devices, a chip-wide PCI fuse is programmed via the Device Selection Wizard in the Designer software (Figure 11, page 12). When the PCI fuse is not programmed, the output drive is standard.

### 3.4.9 JTAG Mode Activation

The JTAG test logic circuit is activated in the Designer software by selecting **Tools > Device Selection**. This brings up the Device Selection dialog box as shown in the following figure. The JTAG test logic circuit can be enabled by clicking the “Reserve JTAG Pins” check box. The following table explains the pins' behavior in either mode.

**Figure 15 • Device Selection Wizard**

**Table 11 • Boundary Scan Pin Configuration and Functionality**

| Reserve JTAG | Checked                                                                | Unchecked |
|--------------|------------------------------------------------------------------------|-----------|
| TCK          | BST input; must be terminated to logical HIGH or LOW to avoid floating | User I/O  |
| TDI, TMS     | BST input; may float or be tied to HIGH                                | User I/O  |
| TDO          | BST output; may float or be connected to TDI of another device         | User I/O  |

### 3.4.10 TRST Pin and TAP Controller Reset

An active reset (TRST) pin is not supported; however, MX devices contain power-on circuitry that resets the boundary scan circuitry upon power-up. Also, the TMS pin is equipped with an internal pull-up resistor. This allows the TAP controller to remain in or return to the Test-Logic-Reset state when there is no input or when a logical 1 is on the TMS pin. To reset the controller, TMS must be HIGH for at least five TCK cycles.

### 3.4.11 Boundary Scan Description Language (BSDL) File

Conforming to the IEEE Standard 1149.1 requires that the operation of the various JTAG components be documented. The BSDL file provides the standard format to describe the JTAG components that can be used by automatic test equipment software. The file includes the instructions that are supported, instruction bit pattern, and the boundary-scan chain order. For an in-depth discussion on BSDL files, see the *BSDL Files Format Description* application note.

BSDL files are grouped into two categories - generic and device-specific. The generic files assign all user I/Os as inouts. Device-specific files assign user I/Os as inputs, outputs or inouts.

Generic files for MX devices are available on the Microsemi SoC Product Group's website:

<http://www.microsemi.com/soc/techdocs/models/bsdl.html>.

## 3.5 Development Tool Support

The MX family of FPGAs is fully supported by Libero® Integrated Design Environment (IDE). Libero IDE is a design management environment, seamlessly integrating design tools while guiding the user through the design flow, managing all design and log files, and passing necessary design data among tools. Libero IDE allows users to integrate both schematic and HDL synthesis into a single flow and verify the entire design in a single environment. Libero IDE includes SynplifyPro from Synopsys, ModelSim® HDL Simulator from Mentor Graphics® and Viewdraw.

Libero IDE includes place-and-route and provides a comprehensive suite of backend support tools for FPGA development, including timing-driven place-and-route, and a world-class integrated static timing analyzer and constraints editor.

reliability. Devices should not be operated outside the recommended operating conditions.

**Table 21 • Recommended Operating Conditions**

| Parameter          | Commercial   | Industrial | Military    | Units |
|--------------------|--------------|------------|-------------|-------|
| Temperature Range* | 0 to +70     | –40 to +85 | –55 to +125 | °C    |
| VCCA               | 4.75 to 5.25 | 4.5 to 5.5 | 4.5 to 5.5  | V     |
| VCCI               | 3.14 to 3.47 | 3.0 to 3.6 | 3.0 to 3.6  | V     |

**Note:** \*Ambient temperature ( $T_A$ ) is used for commercial and industrial grades; case temperature ( $T_C$ ) is used for military grades.

**Table 23 • DC Specification (5.0 V PCI Signaling)<sup>1</sup>**

| Symbol           | Parameter             | Condition | PCI  |      | MX   |                     | Units |
|------------------|-----------------------|-----------|------|------|------|---------------------|-------|
|                  |                       |           | Min. | Max. | Min. | Max.                |       |
| C <sub>IN</sub>  | Input Pin Capacitance |           |      | 10   | —    | 10                  | pF    |
| C <sub>CLK</sub> | CLK Pin Capacitance   |           | 5    | 12   | —    | 10                  | pF    |
| L <sub>PIN</sub> | Pin Inductance        |           |      | 20   | —    | < 8 nH <sup>4</sup> | nH    |

1. PCI Local Bus Specification, Version 2.1, Section 4.2.1.1.

2. Maximum rating for VCCI –0.5 V to 7.0 V

3. VIH(Min) is 2.4V for A42MX36 family. This applies only to VCCI of 5V and is not applicable to VCCI of 3.3V.

4. Dependent upon the chosen package. PCI recommends QFP and BGA packaging to reduce pin inductance and capacitance.

**Table 24 • AC Specifications (5.0V PCI Signaling)\***

| Symbol   | Parameter             | Condition             | PCI                          |      | MX   |      | Units |
|----------|-----------------------|-----------------------|------------------------------|------|------|------|-------|
|          |                       |                       | Min.                         | Max. | Min. | Max. |       |
| ICL      | Low Clamp Current     | $-5 < V_{IN} \leq -1$ | $-25 + (V_{IN} + 1) / 0.015$ |      | –60  | –10  | mA    |
| Slew (r) | Output Rise Slew Rate | 0.4 V to 2.4 V load   | 1                            | 5    | 1.8  | 2.8  | V/ns  |
| Slew (f) | Output Fall Slew Rate | 2.4 V to 0.4 V load   | 1                            | 5    | 2.8  | 4.3  | V/ns  |

**Note:** \*PCI Local Bus Specification, Version 2.1, Section 4.2.1.2.

**Table 31 • 40MX Temperature and Voltage Derating Factors (Normalized to T<sub>J</sub> = 25°C, V<sub>CC</sub> = 3.3 V)**

| 40MX Voltage | Temperature |       |      |      |      |      |       |
|--------------|-------------|-------|------|------|------|------|-------|
|              | -55°C       | -40°C | 0°C  | 25°C | 70°C | 85°C | 125°C |
