### Understanding [Embedded - FPGAs \(Field Programmable Gate Array\)](#)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

### Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

#### Details

|                                |                                                                                                                                             |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| Product Status                 | Obsolete                                                                                                                                    |
| Number of LABs/CLBs            | -                                                                                                                                           |
| Number of Logic Elements/Cells | -                                                                                                                                           |
| Total RAM Bits                 | -                                                                                                                                           |

| CPGA 132 |            |            | C, M, B    |            |            |            |

**Note:** C = Commercial  
 I = Industrial  
 A = Automotive  
 M = Military  
 B = MIL-STD-883 Class B

## 2.7 Speed Grade Offerings

**Table 5 • Speed Grade Offerings**

|   | – F | Std | –1 | –2 | –3 |
|---|-----|-----|----|----|----|
| C | P   | P   | P  | P  | P  |
| I |     | P   | P  | P  | P  |
| A |     | P   |    |    |    |
| M |     | P   | P  |    |    |
| B |     | P   | P  |    |    |

**Note:** See the 40MX and 42MX Automotive Family FPGAs datasheet for details on automotive-grade MX offerings.

Contact your local *Microsemi Sales representative* for device availability.

**Figure 4 • 42MX S-Module Implementation**

A42MX24 and A42MX36 devices contain D-modules, which are arranged around the periphery of the device. D-modules contain wide-decode circuitry, providing a fast, wide-input AND function similar to that found in CPLD architectures (Figure 5, page 9). The D-module allows A42MX24 and A42MX36 devices to perform wide-decode functions at speeds comparable to CPLDs and PALs. The output of the D-module has a programmable inverter for active HIGH or LOW assertion. The D-module output is hardwired to an output pin, and can also be fed back into the array to be incorporated into other logic.

### 3.2.2 Dual-Port SRAM Modules

The A42MX36 device contains dual-port SRAM modules that have been optimized for synchronous or asynchronous applications. The SRAM modules are arranged in 256-bit blocks that can be configured as 32x8 or 64x4. SRAM modules can be cascaded together to form memory spaces of user-definable width and depth. A block diagram of the A42MX36 dual-port SRAM block is shown in Figure 6, page 9.

The A42MX36 SRAM modules are true dual-port structures containing independent read and write ports. Each SRAM module contains six bits of read and write addressing (RDAD[5:0] and WRAD[5:0], respectively) for 64x4-bit blocks. When configured in byte mode, the highest order address bits (RDAD5 and WRAD5) are not used. The read and write ports of the SRAM block contain independent clocks (RCLK and WCLK) with programmable polarities offering active HIGH or LOW implementation. The SRAM block contains eight data inputs (WD[7:0]), and eight outputs (RD[7:0]), which are connected to segmented vertical routing tracks.

The A42MX36 dual-port SRAM blocks provide an optimal solution for high-speed buffered applications requiring FIFO and LIFO queues. The ACTgen Macro Builder within Microsemi's designer software provides capability to quickly design memory functions with the SRAM blocks. Unused SRAM blocks can be used to implement registers for other user logic within the design.

**Figure 8 • Clock Networks of 42MX Devices****Figure 9 • Quadrant Clock Network of A42MX36 Devices**

**Note:** \*QCLK1IN, QCLK2IN, QCLK3IN, and QCLK4IN are internally-generated signals.

### 3.2.5 MultiPlex I/O Modules

42MX devices feature Multiplex I/Os and support 5.0 V, 3.3 V, and mixed 3.3 V/5.0 V operations.

The MultiPlex I/O modules provide the interface between the device pins and the logic array. Figure 10, page 12 is a block diagram of the 42MX I/O module. A variety of user functions, determined by a library macro selection, can be implemented in the module. (See the *Antifuse Macro Library Guide* for more information.) All 42MX I/O modules contain tristate buffers, with input and output latches that can be configured for input, output, or bidirectional operation.

All 42MX devices contain flexible I/O structures, where each output pin has a dedicated output-enable control (Figure 10, page 12). The I/O module can be used to latch input or output data, or both, providing fast set-up time. In addition, the Designer software tools can build a D-type flip-flop using a C-module combined with an I/O module to register input and output signals. See the *Antifuse Macro Library Guide* for more details.

A42MX24 and A42MX36 devices also offer selectable PCI output drives, enabling 100% compliance with version 2.1 of the PCI specification. For low-power systems, all inputs and outputs are turned off to reduce current consumption to below 500  $\mu$ A.

To achieve 5.0 V or 3.3 V PCI-compliant output drives on A42MX24 and A42MX36 devices, a chip-wide PCI fuse is programmed via the Device Selection Wizard in the Designer software (Figure 11, page 12). When the PCI fuse is not programmed, the output drive is standard.

$f_{q2}$  = Average second routed array clock rate in MHz)

**Table 7 • Fixed Capacitance Values for MX FPGAs (pF)**

| Device Type | r1 routed_Clk1 | r2 routed_Clk2 |
|-------------|----------------|----------------|
| A40MX02     | 41.4           | N/A            |
| A40MX04     | 68.6           | N/A            |
| A42MX09     | 118            | 118            |
| A42MX16     | 165            | 165            |
| A42MX24     | 185            | 185            |
| A42MX36     | 220            | 220            |

### 3.4.6 Test Circuitry and Silicon Explorer II Probe

MX devices contain probing circuitry that provides built-in access to every node in a design, via the use of Silicon Explorer II. Silicon Explorer II is an integrated hardware and software solution that, in conjunction with the Designer software, allow users to examine any of the internal nets of the device while it is operating in a prototyping or a production system. The user can probe into an MX device without changing the placement and routing of the design and without using any additional resources. Silicon Explorer II's noninvasive method does not alter timing or loading effects, thus shortening the debug cycle and providing a true representation of the device under actual functional situations.

Silicon Explorer II samples data at 100 MHz (asynchronous) or 66 MHz (synchronous). Silicon Explorer II attaches to a PC's standard COM port, turning the PC into a fully functional 18-channel logic analyzer. Silicon Explorer II allows designers to complete the design verification process at their desks and reduces verification time from several hours per cycle to a few seconds.

Silicon Explorer II is used to control the MODE, DCLK, SDI and SDO pins in MX devices to select the desired nets for debugging. The user simply assigns the selected internal nets in the Silicon Explorer II software to the PRA/PRB output pins for observation. Probing functionality is activated when the MODE pin is held HIGH.

Figure 12, page 16 illustrates the interconnection between Silicon Explorer II and 40MX devices, while Figure 13, page 17 illustrates the interconnection between Silicon Explorer II and 42MX devices

To allow for probing capabilities, the security fuses must not be programmed. (See User Security, page 12 for the security fuses of 40MX and 42MX devices). Table 8, page 17 summarizes the possible device configurations for probing.

PRA and PRB pins are dual-purpose pins. When the "Reserve Probe Pin" is checked in the Designer software, PRA and PRB pins are reserved as dedicated outputs for probing. If PRA and PRB pins are required as user I/Os to achieve successful layout and "Reserve Probe Pin" is checked, the layout tool will override the option and place user I/Os on PRA and PRB pins.

**Figure 12 • Silicon Explorer II Setup with 40MX**

3. All outputs unloaded. All inputs = VCC/VCCI or GND

## 3.8 3.3 V Operating Conditions

The following table shows 3.3 V operating conditions.

**Table 16 • Absolute Maximum Ratings for 40MX Devices\***

| Symbol           | Parameter           | Limits            | Units |
|------------------|---------------------|-------------------|-------|
| VCC              | DC Supply Voltage   | –0.5 to +7.0      | V     |
| VI               | Input Voltage       | –0.5 to VCC + 0.5 | V     |
| VO               | Output Voltage      | –0.5 to VCC + 0.5 | V     |
| t <sub>STG</sub> | Storage Temperature | –65 to +150       | °C    |

**Note:** \*Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. Exposure to absolute maximum rated conditions for extended periods may affect device reliability. Devices should not be operated outside the recommended operating conditions.

**Table 17 • Absolute Maximum Ratings for 42MX Devices\***

| Symbol           | Parameter                   | Limits           | Units |
|------------------|-----------------------------|------------------|-------|
| VCCI             | DC Supply Voltage for I/Os  | –0.5 to +7.0     | V     |
| VCCA             | DC Supply Voltage for Array | –0.5 to +7.0     | V     |
| VI               | Input Voltage               | –0.5 to VCCI+0.5 | V     |
| VO               | Output Voltage              | –0.5 to VCCI+0.5 | V     |
| t <sub>STG</sub> | Storage Temperature         | –65 to +150      | °C    |

**Note:** \*Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. Exposure to absolute maximum rated conditions for extended periods may affect device reliability. Devices should not be operated outside the recommended operating conditions.

**Table 18 • Recommended Operating Conditions**

| Parameter          | Commercial | Industrial | Military    | Units |
|--------------------|------------|------------|-------------|-------|
| Temperature Range* | 0 to +70   | –40 to +85 | –55 to +125 | °C    |
| VCC (40MX)         | 3.0 to 3.6 | 3.0 to 3.6 | 3.0 to 3.6  | V     |
| VCCA (42MX)        | 3.0 to 3.6 | 3.0 to 3.6 | 3.0 to 3.6  | V     |
| VCCI (42MX)        | 3.0 to 3.6 | 3.0 to 3.6 | 3.0 to 3.6  | V     |

**Note:** \*Ambient temperature (T<sub>A</sub>) is used for commercial and industrial grades; case temperature (T<sub>C</sub>) is used for military grades.

All the following tables show various specifications and operating conditions of 40MX and 42MX FPGAs.

### 3.9.3 Output Drive Characteristics for 3.3 V PCI Signaling

**Table 25 • DC Specification (3.3 V PCI Signaling)<sup>1</sup>**

| Symbol           | Parameter                  | Condition         | PCI  |           | MX   |                     | Units |
|------------------|----------------------------|-------------------|------|-----------|------|---------------------|-------|
|                  |                            |                   | Min. | Max.      | Min. | Max.                |       |

| Slew (r) | Output Rise Slew Rate | 0.2 V to 0.6 V load | 1                       | 4    | 1.8  | 2.8  | V/ns  |
| Slew (f) | Output Fall Slew Rate | 0.6 V to 0.2 V load | 1                       | 4    | 2.8  | 4.0  | V/ns  |

**Note:** \*PCI Local Bus Specification, Version 2.1, Section 4.2.2.2.

Figure 27 • Output Buffer Latches

### 3.10.4 Decode Module Timing

The following figure shows decode module timing.

Figure 28 • Decode Module Timing

### 3.10.5 SRAM Timing Characteristics

The following figure shows SRAM timing characteristics.

Figure 29 • SRAM Timing Characteristics

### 3.10.6 Dual-Port SRAM Timing Waveforms

The following figures show dual-port SRAM timing waveforms.

**Table 31 • 40MX Temperature and Voltage Derating Factors (Normalized to  $T_J = 25^\circ\text{C}$ ,  $V_{CC} = 3.3\text{ V}$ )**

| 40MX Voltage | Temperature         |                     |                   |                    |                    |                    |                     |
|--------------|---------------------|---------------------|-------------------|--------------------|--------------------|--------------------|---------------------|
|              | $-55^\circ\text{C}$ | $-40^\circ\text{C}$ | $0^\circ\text{C}$ | $25^\circ\text{C}$ | $70^\circ\text{C}$ | $85^\circ\text{C}$ | $125^\circ\text{C}$ |
| 3.60         | 0.83                | 0.85                | 0.92              | 0.96               | 1.14               | 1.25               | 1.53                |

**Figure 37 • 40MX Junction Temperature and Voltage Derating Curves (Normalized to  $T_J = 25^\circ\text{C}$ ,  $V_{CC} = 3.3\text{ V}$ )**

**Note:** This derating factor applies to all routing and propagation delays

### 3.11.5 PCI System Timing Specification

The following tables list the critical PCI timing parameters and the corresponding timing parameters for the MX PCI-compliant devices.

### 3.11.6 PCI Models

Microsemi provides synthesizable VHDL and Verilog-HDL models for a PCI Target interface, a PCI Target and Target+DMA Master interface. Contact the Microsemi sales representative for more details.

**Table 32 • Clock Specification for 33 MHz PCI**

| Symbol     | Parameter      | PCI  |      | A42MX24 |      | A42MX36 |      | Units |
|------------|----------------|------|------|---------|------|---------|------|-------|
|            |                | Min. | Max. | Min.    | Max. | Min.    | Max. |       |
| $t_{CYC}$  | CLK Cycle Time | 30   | —    | 4.0     | —    | 4.0     | —    | ns    |
| $t_{HIGH}$ | CLK High Time  | 11   | —    | 1.9     | —    | 1.9     | —    | ns    |
| $t_{LOW}$  | CLK Low Time   | 11   | —    | 1.9     | —    | 1.9     | —    | ns    |

**Table 33 • Timing Parameters for 33 MHz PCI**
