### **Understanding Embedded - FPGAs (Field Programmable Gate Array)**

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

### **Applications of Embedded - FPGAs**

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications,

#### **Details**

Product Status	Active
Number of LABs/CLBs	-
Number of Logic Elements/Cells	-
Total RAM Bits	-
Number of I/O	72
Number of Gates	36000
Voltage - Supply	3V ~ 3.6V, 4.5V ~ 5.5V
Mounting Type	Surface Mount
Operating Temperature	-55°C ~ 125°C (TC)
Package / Case	84-LCC (J-Lead)
Supplier Device Package	84-PLCC (29.31x29.31)
Purchase URL	<a href="https://www.e-xfl.com/product-detail/microchip-technology/a42mx24-plg84m">https://www.e-xfl.com/product-detail/microchip-technology/a42mx24-plg84m</a>

**About Microsemi**

Microsemi Corporation (Nasdaq: MSCC) offers a comprehensive portfolio of semiconductor and system solutions for aerospace & defense, communications, data center and industrial markets. Products include high-performance and radiation-hardened analog mixed-signal integrated circuits, FPGAs, SoCs and ASICs; power management products; timing and synchronization devices and precise time solutions, setting the world's standard for time; voice processing devices; RF solutions; discrete components; enterprise storage and communication solutions, security technologies and scalable anti-tamper products; Ethernet solutions; Power-over-Ethernet ICs and midspans; as well as custom design capabilities and services. Microsemi is headquartered in Aliso Viejo, California, and has approximately 4,800 employees globally. Learn more at [www.microsemi.com](http://www.microsemi.com).

 I = Industrial  
 A = Automotive  
 M = Military  
 B = MIL-STD-883 Class B

## 2.7 Speed Grade Offerings

**Table 5 • Speed Grade Offerings**

	- F	Std	-1	-2	-3
C	P	P	P	P	P
I		P	P	P	P
A		P			
M		P	P		
B		P	P		

**Note:** See the [40MX and 42MX Automotive Family FPGAs](#) datasheet for details on automotive-grade MX offerings.

Contact your local [Microsemi Sales representative](#) for device availability.

Designer software development tools provide a design library of I/O macro functions that can implement all I/O configurations supported by the MX FPGAs.

**Figure 10 • 42MX I/O Module**

**Note:** \*Can be configured as a Latch or D Flip-Flop (Using C-Module)

**Figure 11 • PCI Output Structure of A42MX24 and A42MX36 Devices**

## 3.3 Other Architectural Features

The following sections cover other architectural features of 40MX and 42MX FPGAs.

### 3.3.1 Performance

MX devices can operate with internal clock frequencies of 250 MHz, enabling fast execution of complex logic functions. MX devices are live on power-up and do not require auxiliary configuration devices and thus are an optimal platform to integrate the functionality contained in multiple programmable logic devices. In addition, designs that previously would have required a gate array to meet performance can be integrated into an MX device with improvements in cost and time-to-market. Using timing-driven place-and-route (TDPR) tools, designers can achieve highly deterministic device performance.

### 3.3.2 User Security

Microsemi FuseLock provides robust security against design theft. Special security fuses are hidden in the fabric of the device and protect against unauthorized users attempting to access the programming and/or probe interfaces. It is virtually impossible to identify or bypass these fuses without damaging the device, making Microsemi antifuse FPGAs protected with the highest level of security available from both invasive and noninvasive attacks.

Special security fuses in 40MX devices include the Probe Fuse and Program Fuse. The former disables the probing circuitry while the latter prohibits further programming of all fuses, including the Probe Fuse. In 42MX devices, there is the Security Fuse which, when programmed, both disables the probing circuitry and prohibits further programming of the device.

### 3.3.3 Programming

Device programming is supported through the Silicon Sculptor series of programmers. Silicon Sculptor is a compact, robust, single-site and multi-site device programmer for the PC. With standalone software, Silicon Sculptor is designed to allow concurrent programming of multiple units from the same PC.

**Note:** \*Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. Exposure to absolute maximum rated conditions for extended periods may affect device reliability. Devices should not be operated outside the recommended operating conditions.

**Table 14 • Recommended Operating Conditions**

Parameter	Commercial	Industrial	Military	Units
Temperature Range*	0 to +70	−40 to +85	−55 to +125	°C
VCC (40MX)	4.75 to 5.25	4.5 to 5.5	4.5 to 5.5	V
VCCA (42MX)	4.75 to 5.25	4.5 to 5.5	4.5 to 5.5	V
VCCI (42MX)	4.75 to 5.25	4.5 to 5.5	4.5 to 5.5	V

**Note:** \* Ambient temperature ( $T_A$ ) is used for commercial and industrial grades; case temperature ( $T_C$ ) is used for military grades.

### 3.7.1 5 V TTL Electrical Specifications

The following tables show 5 V TTL electrical specifications.

**Table 15 • 5V TTL Electrical Specifications**

Symbol	Parameter	Commercial		Commercial -F		Industrial		Military		Units
		Min.	Max.	Min.	Max.	Min.	Max.	Min.	Max.	
VOH <sup>1</sup>	IOH = −10 mA	2.4		2.4						V
	IOH = −4 mA					3.7		3.7		V
VOL <sup>1</sup>	IOL = 10 mA		0.5		0.5					V
	IOL = 6 mA					0.4		0.4		V
VIL		−0.3	0.8	−0.3	0.8	−0.3	0.8	−0.3	0.8	V
VIH (40MX)		2.0	VCC + 0.3	2.0	VCC + 0.3	2.0	VCC + 0.3	2.0	VCC + 0.3	V
VIH (42MX) <sup>2</sup>		2.0	VCCI + 0.3	2.0	VCCI + 0.3	2.0	VCCI + 0.3	2.0	VCCI + 0.3	V
IIL	VIN = 0.5 V		−10		−10		−10		−10	μA
IIH	VIN = 2.7 V		−10		−10		−10		−10	μA
Input Transition Time, $T_R$ and $T_F$			500		500		500		500	ns
$C_{IO}$ I/O Capacitance			10		10		10		10	pF
Standby Current, ICC <sup>3</sup>	A40MX02, A40MX04		3		25		10		25	mA
	A42MX09		5		25		25		25	mA
	A42MX16		6		25		25		25	mA
	A42MX24, A42MX36		20		25		25		25	mA
Low power mode Standby Current	42MX devices only		0.5		ICC − 5.0		ICC − 5.0		ICC − 5.0	mA
IIO, I/O source sink current	Can be derived from the <i>IBIS model</i> ( <a href="http://www.microsemi.com/soc/techdocs/models/ibis.html">http://www.microsemi.com/soc/techdocs/models/ibis.html</a> )									

1. Only one output tested at a time. VCC/VCCI = min

2. VIH(Min) is 2.4V for A42MX36 family. This applies only to VCCI of 5V and is not applicable to VCCI of 3.3V

**Table 38 • A42MX09 Timing Characteristics (Nominal 5.0 V Operation) (continued)(Worst-Case Commercial Conditions, VCCA = 4.75 V, T<sub>J</sub> = 70°C)**

1. For dual-module macros, use  $t_{PD1} + t_{RD1} + t_{PDn}$ ,  $t_{CO} + t_{RD1} + t_{PDn}$ , or  $t_{PD1} + t_{RD1} + t_{SUD}$ , whichever is appropriate.
2. Routing delays are for typical designs across worst-case operating conditions. These parameters should be used for estimating device performance. Post-route timing analysis or simulation is required to determine actual performance.
3. Data applies to macros based on the S-module. Timing parameters for sequential macros constructed from C-modules can be obtained from the Timer utility.
4. Set-up and hold timing parameters for the input buffer latch are defined with respect to the PAD and the D input. External setup/hold timing parameters must account for delay from an external PAD signal to the G inputs. Delay from an external PAD signal to the G input subtracts (adds) to the internal setup (hold) time.
5. Delays based on 35 pF loading.
