

Welcome to [E-XFL.COM](#)

### What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

### Applications of "[Embedded - Microcontrollers](#)"

#### Details

## Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: “Standard”, “High Quality”, and “Specific”. The recommended applications for each Renesas Electronics product depends on the product’s quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as “Specific” without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as “Specific” or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is “Standard” unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.
  - “Standard”: Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
  - “High Quality”: Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
  - “Specific”: Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.
8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) “Renesas Electronics” as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) “Renesas Electronics product(s)” means any product developed or manufactured by or for Renesas Electronics.

## 1.4 Performance Overview

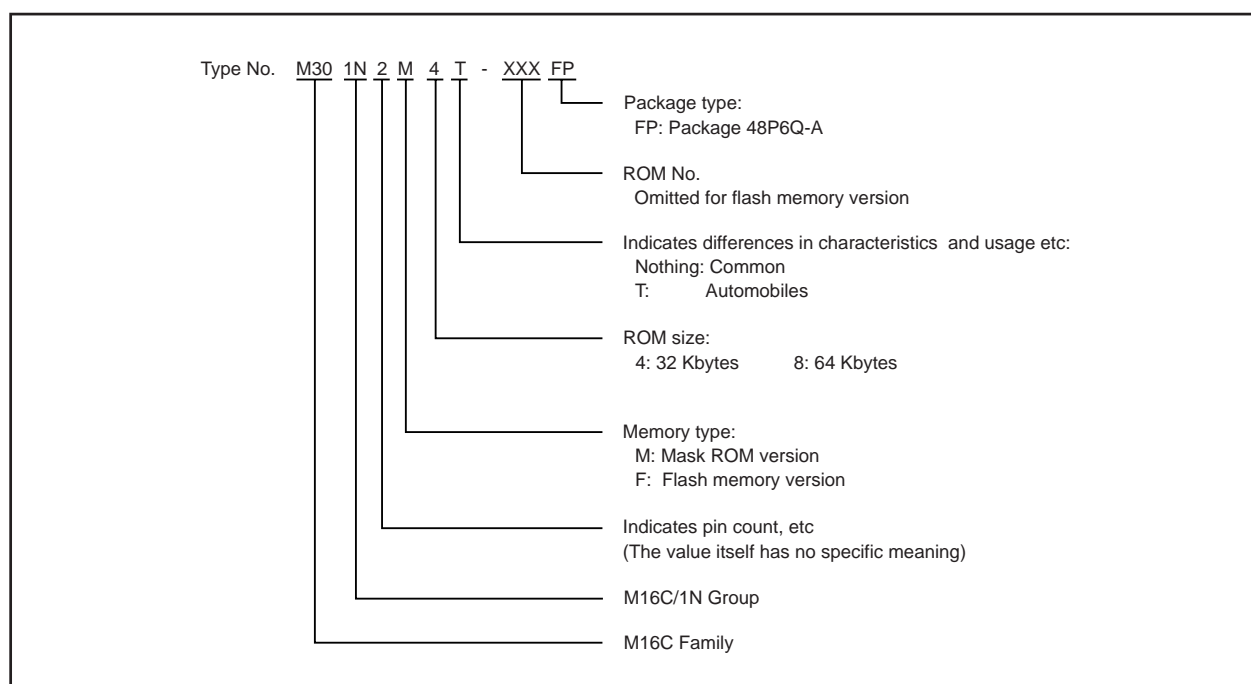

Table 1.2 shows performance overview.

**Table 1.2 Performance overview**

As of June 2004

Type No.	ROM	RAM	Package	Remarks
M301N2M4T-XXXFP(D)	32Kbytes	1Kbytes	48P6Q-A	Mask ROM
M301N2M8T-XXXFP(D)	64Kbytes	3Kbytes		Flash memory
M301N2F8TFP(D)				
M301N2F8FP(D)				

(D): Under development

**Figure 1.2 Type No., memory size, and package**

## 1.6 Pin Description

Table 1.3 shows the pin description.

**Table 1.3 Pin Description**

Pin name	Signal name	I/O type	Function
VCC, VSS	Power supply input	Input	Supply 4.2 to 5.5 V to the VCC pin. Supply 0 V to the VSS pin.
IVCC	IVCC	Input	Connect a capacitor (0.1 $\mu$ F) between this pin and VSS.
CNVSS	CNVSS	Input	Connect it to the VSS pin via resistance (about 5 k $\Omega$ ).
$\overline{\text{RESET}}$	Reset input	Input	A "L" on this input resets the microcomputer.
XIN	Clock input	Input	These pins are provided for the main clock oscillation circuit. Connect a ceramic resonator or crystal between the XIN and XOUT pins. To use an externally derived clock, input it to the XIN pin and leave the XOUT pin open.
XOUT	Clock output	Output	
VREF	Reference voltage input	Input	This pin is a reference voltage input for the A/D converter.
P0 <sub>0</sub> to P0 <sub>7</sub>	I/O port P0	Input/output	This is an 8-bit CMOS I/O port. It has an input/output port direction register that allows the user to set each pin for input or output individually. When set for input, the user can specify in units of four bits via software whether or not they are tied to a pull-up resistor. These pins are shared with analog input pins. P0 <sub>2</sub> and P0 <sub>3</sub> function as CAN0 I/O pins by using software.
P1 <sub>0</sub> to P1 <sub>7</sub>	I/O port P1	Input/output	This is an 8-bit I/O port equivalent to P0. P1 <sub>0</sub> to P1 <sub>3</sub> are shared with analog inputs and key input interrupts. P1 <sub>4</sub> to P1 <sub>6</sub> are shared with serial I/O pins. P1 <sub>7</sub> is shared with timer input. Can be used as an LED drive port.
P2 <sub>0</sub> to P2 <sub>1</sub>	I/O port P2	Input/output	This is a 2-bit I/O port equivalent to P0.
P3 <sub>0</sub> to P3 <sub>7</sub>	I/O port P3	Input/output	This is a 8-bit I/O port equivalent to P0. P3 <sub>0</sub> to P3 <sub>3</sub> are shared with timer input/output. P3 <sub>4</sub> to P3 <sub>7</sub> are shared with serial I/O. P3 <sub>4</sub> is shared with analog outputs.
P4 <sub>0</sub> to P4 <sub>7</sub>	I/O port P4	Input/output	This is a 8-bit I/O port equivalent to P0. P4 <sub>0</sub> to P4 <sub>1</sub> are shared with analog inputs. P4 <sub>2</sub> to P4 <sub>5</sub> are shared with interrupt inputs. P4 <sub>6</sub> to P4 <sub>7</sub> are shared with the I/O pin of the clock oscillation circuit for the clock.
P5 <sub>0</sub> to P5 <sub>2</sub>	I/O port P5	Input/output	This is a 3-bit I/O port equivalent to P0. P5 <sub>0</sub> and P5 <sub>1</sub> function as CAN0 I/O pins by using software.

### 2.3 Frame Base Register (FB)

FB is configured with 16 bits, and is used for FB relative addressing.

### 2.4 Interrupt Table Register (INTB)

INTB is configured with 20 bits, indicating the start address of an interrupt vector table.

### 2.5 Program Counter (PC)

PC is configured with 20 bits, indicating the address of an instruction to be executed.

### 2.6 User Stack Pointer (USP), Interrupt Stack Pointer (ISP)

Stack pointer (SP) comes in two types: USP and ISP, each configured with 16 bits.

Your desired type of stack pointer (USP or ISP) can be selected by the U flag of FLG.

### 2.7 Static Base Register (SB)

SB is configured with 16 bits, and is used for SB relative addressing.

### 2.8 Flag Register (FLG)

FLG consists of 11 bits, indicating the CPU status.

#### 2.8.1 Carry Flag (C Flag)

This flag retains a carry, borrow, or shift-out bit that has occurred in the arithmetic/logic unit.

#### 2.8.2 Debug Flag (D Flag)

This flag is used exclusively for debugging purpose. During normal use, it must be set to "0".

#### 2.8.3 Zero Flag (Z Flag)

This flag is set to "1" when an arithmetic operation resulted in 0; otherwise, it is "0".

#### 2.8.4 Sign Flag (S Flag)

This flag is set to "1" when an arithmetic operation resulted in a negative value; otherwise, it is "0".

#### 2.8.5 Register Bank Select Flag (B Flag)

Register bank 0 is selected when this flag is "0"; register bank 1 is selected when this flag is "1".

#### 2.8.6 Overflow Flag (O Flag)

This flag is set to "1" when the operation resulted in an overflow; otherwise, it is "0".

#### 2.8.7 Interrupt Enable Flag (I Flag)

This flag enables a maskable interrupt.

Maskable interrupts are disabled when the I flag is "0", and are enabled when the I flag is "1". The I flag is set to "0" when the interrupt request is accepted.

#### 2.8.8 Stack Pointer Select Flag (U Flag)

ISP is selected when the U flag is "0"; USP is selected when the U flag is "1".

The U flag is set to "0" when a hardware interrupt request is accepted or an INT instruction for software interrupt Nos. 0 to 31 is executed.

#### 2.8.9 Processor Interrupt Priority Level (IPL)

IPL is configured with three bits, for specification of up to eight processor interrupt priority levels from level 0 to level 7.

If a requested interrupt has priority greater than IPL, the interrupt request is enabled.

#### 2.8.10 Reserved Area

When write to this bit, write "0". When read, its content is indeterminate.

### 3. Memory

Figure 3.1 is a memory map. The address space extends the 1M bytes from address 00000<sub>16</sub> to FFFFF<sub>16</sub>. From FFFFF<sub>16</sub> down is ROM. For example, in the M301N2M4T-XXXFP, there is 32K bytes of internal ROM from F8000<sub>16</sub> to FFFFF<sub>16</sub>. The vector table for fixed interrupts such as the reset are mapped to FFFDC<sub>16</sub> to FFFFF<sub>16</sub>. The starting address of the interrupt routine is stored here. The address of the vector table for timer interrupts, etc., can be set as desired using the internal register (INTB). See the section on interrupts for details.

From 00400<sub>16</sub> up is RAM. For example, in the M301N2M4T-XXXFP, there is 1K byte of internal RAM from 00400<sub>16</sub> to 007FF<sub>16</sub>. In addition to storing data, the RAM also stores the stack used when calling subroutines and when interrupts are generated.

The SFR area is mapped to 00000<sub>16</sub> to 003FF<sub>16</sub>. This area accommodates the control registers for peripheral devices such as I/O ports, A/D converter, serial I/O, and timers, etc. Any part of the SFR area that is not occupied is reserved and cannot be used for other purposes.

The special page vector table is mapped to FFE00<sub>16</sub> to FFFDB<sub>16</sub>. If the starting addresses of subroutines or the destination addresses of jumps are stored here, subroutine call instructions and jump instructions can be used as 2-byte instructions, reducing the number of program steps.

Figure 3.1 Memory map

## 4. Special Function Registers (SFR)

Address	Register	Symbol	After reset
0000 <sub>16</sub>			
0001 <sub>16</sub>

## 5. Electrical Characteristics

**Table 5.1 Absolute maximum ratings**

Symbol	Parameter		Condition	Rated value	Unit
V <sub>cc</sub>	Supply voltage			- 0.3 to 6.5	V
V <sub>i</sub>	Input voltage	RESET, V <sub>REF</sub> , X <sub>IN</sub> P0 <sub>0</sub> to P0 <sub>7</sub> , P1 <sub>0</sub> to P1 <sub>7</sub> , P2 <sub>0</sub> , P2 <sub>1</sub> , P3 <sub>0</sub> to P3 <sub>7</sub> , P4 <sub>0</sub> to P4 <sub>7</sub> , P5 <sub>0</sub> to P5 <sub>2</sub> , CNVss (Note 1)		- 0.3 to V <sub>cc</sub> + 0.3	V
V <sub>o</sub>	Output voltage	P0 <sub>0</sub> to P0 <sub>7</sub> , P1 <sub>0</sub> to P1 <sub>7</sub> , P2 <sub>0</sub> , P2 <sub>1</sub> , P3 <sub>0</sub> to P3 <sub>7</sub> , P4 <sub>0</sub> to P4 <sub>7</sub> , P5 <sub>0</sub> to P5 <sub>2</sub> , X <sub>OUT</sub>		- 0.3 to V <sub>cc</sub> + 0.3	V
		I <sub>Vcc</sub>		- 0.3 to 2.8V	V
P <sub>d</sub>	Power dissipation		T <sub>opr</sub> = 25 °C	300	mW
T <sub>opr</sub>	Operating ambient temperature			- 40 to 85 (Note 2)	°C
T <sub>stg</sub>	Storage temperature			- 65 to 150	°C

Note 1: CNVss pin of flash memory version: -0.3 to 6.5 V

Note 2: When flash memory version is program/erase mode: 0 to 60 °C

**Table 5.2 Recommended operating conditions**  
**(Unless otherwise noted: Vcc = 4.2V to 5.5V, Topr = -40 to 85°C)**

Symbol	Parameter		Standard			Unit
			Min	Typ.	Max.	
Vcc	Supply voltage		4.2	5.0	5.5	V
Vss	Supply voltage			0		V
VIH	HIGH input voltage	P00 to P07, P10 to P17, P20, P21, P30 to P37, P40 to P47, P50 to P52, XIN, RESET, CNVss	0.8Vcc		Vcc	V
VIL	LOW input voltage	P00 to P07, P10 to P17, P20, P21, P30 to P37, P40 to P47, P50 to P52, XIN, RESET, CNVss	0		0.2Vcc	V
IOH (peak)	HIGH peak output current	P00 to P07, P10 to P17, P20, P21, P30 to P37, P40 to P47, P50 to P52			- 10.0	mA
IOH (avg)	HIGH average output current	P00 to P07, P10 to P17, P20, P21, P30 to P37, P40 to P47, P50 to P52			- 5.0	mA
IOL (peak)	LOW peak output current	P00 to P07, P20, P21, P30 to P37, P40 to P47, P50 to P52			10.0	mA
		P10 to P17	HIGH POWER		20.0	mA
			LOW POWER		10.0	
IOL (avg)	LOW average output current	P00 to P07, P20, P21, P30 to P37, P40 to P47, P50 to P52			5.0	mA
		P10 to P17	HIGH POWER		10.0	mA
			LOW POWER		5.0	
f (XIN)	Main clock input oscillation frequency (Note 3)		Vcc=4.2V to 5.5V	0	16	MHz
f (XCIN)	Subclock oscillation frequency			32.768	50	kHz

Note 1: The average output current is an average value measured over 100ms.

Note 2: Keep output current as follows:

The sum of port P00 to P03, P13 to P17, P21, P34 to P37, P46, P47, P50 to P52 IOL (peak) is under 60 mA. The sum of port P00 to P03, P13 to P17, P21, P34 to P37, P46, P47, P50 to P52 IOH (peak) is under 60 mA. The sum of port P04 to P07, P10 to P12, P20, P30 to P33, P40 to P45 IOL (peak) is under 60 mA. The sum of port P04 to P07, P10 to P12, P20, P30 to P33, P40 to P45 IOH (peak) is under 60 mA.

Note 3: Relationship between main clock oscillation frequency and supply voltage is shown as below.

**Table 5.3 Electrical characteristics (1)****(Unless otherwise noted: VCC = 5V, VSS = 0V at Topr = -40 to 85°C, f(XIN) = 16MHz)**

Symbol	Parameter		Measuring condition	Standard			Unit
				Min.	Typ.	Max.	
VOH	HIGH output voltage	P00 to P07, P10 to P17, P20 to P21, P30 to P37, P40 to P47, P50 to P52	IOH = - 5 mA	3.0			V
			IOH = - 200 $\mu$ A	4.7			
VOH	HIGH output voltage	XOUT	HIGH POWER	3.0			V
			LOW POWER	3.0			
VOH	HIGH output voltage	XCOUT	HIGH POWER		2.5		V
			LOW POWER		1.6		
VOL	LOW output voltage	P00 to P07, P20, P21, P30 to P37, P40 to P47, P50 to P52	IOL = 5 mA			2.0	V
			IOL = 200 $\mu$ A			0.45	
VOL	LOW output voltage	P10 to P17	HIGH POWER			2.0	V
			LOW POWER			2.0	
VOL	LOW output voltage	XOUT	HIGH POWER			2.0	V
			LOW POWER			2.0	
VOL	LOW output voltage	XCOUT	HIGH POWER		0		V
			LOW POWER		0		
VT+ -VT-	Hysteresis	CNTR0, TCIN, INT0 to INT3, CLK0, CLK1, P45 Rx D0, Rx D1, K10 to K13, CRX0		0.2		0.8	V
VT+ -VT-	Hysteresis	RESET		0.2		1.8	V
IiH	HIGH input current	P00 to P07, P10 to P17, P20, P21, P30 to P37, P40 to P47, P50 to P52, XIN, RESET, CNVSS	VI = 5V			5.0	$\mu$ A
IiL	LOW input current	P00 to P07, P10 to P17, P20, P21, P30 to P37, P40 to P47, P50 to P52, XIN, RESET, CNVSS	VI = 0V			-5.0	$\mu$ A
RPULLUP	Pull-up resistor	P00 to P07, P10 to P17, P20, P21, P30 to P37, P40 to P47, P50 to P52	VI = 0V	30.0	50.0	167.0	k $\Omega$
RfxIN	Feedback resistor	XIN			1.0		M $\Omega$
RfxCIN	Feedback resistor	XCIN			15.0		M $\Omega$
VRAM	RAM retention voltage		When clock is stopped	2.0			V
ROSC	Oscillation frequency of On-chip oscillator	Mask ROM		300	600	1200	kHz
		Flash memory					

**Table 5.7 A/D conversion characteristics****(Unless otherwise noted:  $V_{CC} = V_{REF} = 5V$ ,  $V_{SS} = 0V$  at  $T_{opr} = 25^{\circ}C$ ,  $f(X_{IN}) = 16MHz$ )**

Symbol	Parameter		Measuring condition		Standard			Unit
					Min.	Typ.	Max.	
—	Resolution		VREF=VCC				10	Bits
—	Absolute accuracy	Sample & hold function not available	VREF=VCC= 5V				±3	LSB
		Sample & hold function available(10bit)	VREF=VCC= 5V	AN0 to AN11 input			±3	LSB
				ANEX0, ANEX1 input, external op-amp connected mode			±7	LSB
		Sample & hold function available(8bit)	VREF=VCC= 5V					±2
RLADDER	Ladder resistance		VREF=VCC		10		40	kΩ
tCONV	Conversion time(10bit)		f(XIN)=10MHz, ØAD=fAD=10MHz		3.3			µs
tCONV	Conversion time(8bit)		f(XIN)=10MHz, ØAD=fAD=10MHz		2.8			µs
tsAMP	Sampling time		f(XIN)=10MHz, ØAD=fAD=10MHz		0.3			µs
VREF	Reference voltage		f(XIN)=10MHz, ØAD=fAD=10MHz		2		VCC	V
VIA	Analog input voltage		f(XIN)=10MHz, ØAD=fAD=10MHz		0		VREF	V

Note 1: Divide the f<sub>AD</sub> if f(X<sub>IN</sub>) exceeds 10MHz, and make AD operation clock frequency ( $\emptyset_{AD}$ ) equal to or lower than 10MHz.

**Table 5.8 D/A conversion characteristics****(Unless otherwise noted:  $V_{CC} = V_{REF} = 5V$ ,  $V_{SS} = 0V$  at  $T_{opr} = 25^{\circ}C$ ,  $f(X_{IN}) = 16MHz$ )**

Symbol	Parameter	Measuring condition	Standard			Unit
			Min.	Typ.	Max.	
—	Resolution				8	Bits
—	Absolute accuracy				1.0	%
t <sub>su</sub>	Setup time				3	$\mu s$
R <sub>o</sub>	Output resistance		4	10	20	k $\Omega$
I <sub>VREF</sub>	Reference power supply input current	(Note 1)			1.5	mA

Note 1: The A/D converter's ladder resistance is not included.

When D/A register contents are not "00<sub>16</sub>", the current I<sub>VREF</sub> always flows even though V<sub>REF</sub> may have been set to be unconnected by the A/D control register.

## 5.1 Timing requirements

(Unless otherwise noted:  $V_{CC} = 5V$ ,  $V_{SS} = 0V$  at  $T_{opr} = -40$  to  $85^{\circ}C$ )

**Table 5.9 XIN input**

Symbol	Parameter	Standard		Unit
		Min.	Max.	
$t_{c(XIN)}$	XIN input cycle time	62.5		ns
$t_{wH(XIN)}$	XIN input HIGH pulse width	30		ns
$t_{wL(XIN)}$	XIN input LOW pulse width	30		ns

**Table 5.10 CNTR0 input**

Symbol	Parameter	Standard		Unit
		Min.	Max.	
$t_{c(CNTR0)}$	CNTR0 input cycle time	100		ns
$t_{wH(CNTR0)}$	CNTR0 input HIGH pulse width	40		ns
$t_{wL(CNTR0)}$	CNTR0 input LOW pulse width	40		ns

**Table 5.11 TCIN input**

Symbol	Parameter	Standard		Unit
		Min.	Max.	
$t_{c(TCIN)}$	TCIN input cycle time	400(Note 1)		ns
$t_{wH(TCIN)}$	TCIN input HIGH pulse width	200(Note 2)		ns
$t_{wL(TCIN)}$	TCIN input LOW pulse width	200(Note 2)		ns

Note 1: Use the greater value, either (1/digital filter clock frequency X 6) or min. value.

Note 2: Use the greater value, either (1/digital filter clock frequency X 3) or min. value.

**Table 5.12 Serial I/O**

Symbol	Parameter	Standard		Unit
		Min.	Max.	
$t_{c(CLK)}$	CLKi input cycle time	200		ns
$t_{w(CKH)}$	CLKi input HIGH pulse width	100		ns
$t_{w(CKL)}$	CLKi input LOW pulse width	100		ns
$t_{d(C-Q)}$	TxDi output delay time		80	ns
$t_{h(C-Q)}$	TxDi hold time	0		ns
$t_{su(D-C)}$	RxDi input setup time	30		ns
$t_{h(C-D)}$	RxDi input hold time	90		ns

**Table 5.13 External interrupt  $\overline{INTi}$  input**

Symbol	Parameter	Standard		Unit
		Min.	Max.	
$t_{w(INH)}$	$\overline{INTi}$ input HIGH pulse width	250(Note 1)		ns
$t_{w(INL)}$	$\overline{INTi}$ input LOW pulse width	250(Note 2)		ns

Note 1: When the  $\overline{INT0}$  input filter select bit selects the digital filter, use the  $\overline{INT0}$  input HIGH pulse width to the greater value, either (1/digital filter clock frequency X 3) or min. value.

Note 2: When the  $\overline{INT0}$  input filter select bit selects the digital filter, use the  $\overline{INT0}$  input LOW pulse width to the greater value, either (1/digital filter clock frequency X 3) or min. value.

## Renesas Technology Corp. Sales Strategic Planning Div. Nippon Bldg., 2-6-2, Ohte-machi, Chiyoda-ku, Tokyo 100-0004, Japan

Keep safety first in your circuit designs!

1. Renesas Technology Corp. puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage.  
Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of nonflammable material or (iii) prevention against any malfunction or mishap.

Notes regarding these materials

1. These materials are intended as a reference to assist our customers in the selection of the Renesas Technology Corp. product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Renesas Technology Corp. or a third party.
2. Renesas Technology Corp. assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
3. All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Renesas Technology Corp. without notice due to product improvements or other reasons. It is therefore recommended that customers contact Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor for the latest product information before purchasing a product listed herein.  
The information described here may contain technical inaccuracies or typographical errors.  
Renesas Technology Corp. assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors.  
Please also pay attention to information published by Renesas Technology Corp. by various means, including the Renesas Technology Corp. Semiconductor home page (<http://www.renesas.com>).
4. When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Renesas Technology Corp. assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
5. Renesas Technology Corp. semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
6. The prior written approval of Renesas Technology Corp. is necessary to reprint or reproduce in whole or in part these materials.
7. If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.  
Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
8. Please contact Renesas Technology Corp. for further details on these materials or the products contained therein.
