

Welcome to [E-XFL.COM](https://www.e-xfl.com)

Understanding [Embedded - Microprocessors](#)

Embedded microprocessors are specialized computing chips designed to perform specific tasks within an embedded system. Unlike general-purpose microprocessors found in personal computers, embedded microprocessors are tailored for dedicated functions within larger systems, offering optimized performance, efficiency, and reliability. These microprocessors are integral to the operation of countless electronic devices, providing the computational power necessary for controlling processes, handling data, and managing communications.

Applications of [Embedded - Microprocessors](#)

Embedded microprocessors are utilized across a broad spectrum of applications, making them indispensable in

Details

Product Status	Obsolete
Core Processor	MPC8xx
Number of Cores/Bus Width	1 Core, 32-Bit
Speed	50MHz
Co-Processors/DSP	Communications; CPM
RAM Controllers	DRAM
Graphics Acceleration	No
Display & Interface Controllers	-
Ethernet	10Mbps (1)
SATA	-
USB	USB 1.x (1)
Voltage - I/O	3.3V
Operating Temperature	-40°C ~ 95°C (TA)
Security Features	-
Package / Case	256-BGA
Supplier Device Package	256-PBGA (23x23)
Purchase URL	https://www.e-xfl.com/product-detail/nxp-semiconductors/xpc850czt50bu

The CPM of the MPC850 supports up to seven serial channels, as follows:

- One or two serial communications controllers (SCCs). The SCCs support Ethernet, ATM (MPC850SR and MPC850DSL), HDLC and a number of other protocols, along with a transparent mode of operation.
- One USB channel
- Two serial management controllers (SMCs)
- One I²C port
- One serial peripheral interface (SPI).

[Table 1](#) shows the functionality supported by the members of the MPC850 family.

Table 1. MPC850 Functionality Matrix

Part	Number of SCCs Supported	Ethernet Support	ATM Support	USB Support	Multi-channel HDLC Support	Number of PCMCIA Slots Supported
MPC850	1	Yes	-	Yes	-	1
MPC850DE	2	Yes	-	Yes	-	1
MPC850SR	2	Yes	Yes	Yes	Yes	1
MPC850DSL	2	Yes	Yes	Yes	No	1

Additional documentation may be provided for parts listed in [Table 1](#).

Table 5. DC Electrical Specifications (continued)

Characteristic	Symbol	Min	Max	Unit
Input low voltage	V _{IL}	GND	0.8	V
EXTAL, EXTCLK input high voltage	V _{IHC}	0.7*(V _{CC})	V _{CC} +0.3	V
Input leakage current, V _{in} = 5.5 V (Except TMS, $\overline{\text{TRST}}$, DSCK and DSDI pins)	I _{in}	—	100	μA
Input leakage current, V _{in} = 3.6V (Except TMS, $\overline{\text{TRST}}$, DSCK and DSDI pins)	I _{in}	—	10	μA
Input leakage current, V _{in} = 0V (Except TMS, $\overline{\text{TRST}}$, DSCK and DSDI pins)	I _{in}	—	10	μA
Input capacitance	C _{in}	—	20	pF
Output high voltage, IOH = -2.0 mA, VDDH = 3.0V except XTAL, XFC, and open-drain pins	VOH	2.4	—	V
Output low voltage CLKOUT ³ IOL = 3.2 mA ¹ IOL = 5.3 mA ² IOL = 7.0 mA PA[14]/ $\overline{\text{USBOE}}$, PA[12]/TXD2 IOL = 8.9 mA $\overline{\text{TS}}$, $\overline{\text{TA}}$, $\overline{\text{TEA}}$, $\overline{\text{BI}}$, $\overline{\text{BB}}$, $\overline{\text{HRESET}}$, $\overline{\text{SRESET}}$	VOL	—	0.5	V

³ The MPC850 IBIS model must be used to accurately model the behavior of the Clkout output driver for the full and half drive setting. Due to the nature of the Clkout output buffer, IOH and IOL for Clkout should be extracted from the IBIS model at any output voltage level.

5 Power Considerations

The average chip-junction temperature, T_J, in °C can be obtained from the equation:

$$T_J = T_A + (P_D \cdot \theta_{JA})(1)$$

where

$$T_A = \text{Ambient temperature, } ^\circ\text{C}$$

Information in this document is provided solely to enable system and software implementers to use Freescale Semiconductor products. There are no express or implied copyright licenses granted hereunder to design or fabricate any integrated circuits or integrated circuits based on the information in this document.

Freescale Semiconductor reserves the right to make changes without further notice to any products herein. Freescale Semiconductor makes no warranty, representation or guarantee regarding the suitability of its products for any particular purpose, nor does Freescale Semiconductor assume any liability arising out of the application or use of any product or circuit, and specifically disclaims any and all liability, including without limitation consequential or incidental damages. "Typical" parameters which may be provided in Freescale Semiconductor data sheets and/or specifications can and do vary in different applications and actual performance may vary over time. All operating parameters, including "Typicals" must be validated for each customer application by customer's technical experts. Freescale Semiconductor does not convey any license under its patent rights nor the rights of others. Freescale Semiconductor products are not designed, intended, or authorized for use as components in systems intended for surgical implant into the body, or other applications intended to support or sustain life, or for any other application in which the failure of the Freescale Semiconductor product could create a situation where personal injury or death may occur. Should Buyer purchase or use Freescale Semiconductor products for any such unintended or unauthorized application, Buyer shall indemnify and hold Freescale Semiconductor and its officers, employees, subsidiaries, affiliates, and distributors harmless against all claims, costs, damages, and expenses, and reasonable attorney fees arising out of, directly or indirectly, any claim of personal injury or death associated with such unintended or unauthorized use, even if such claim alleges that Freescale Semiconductor was negligent regarding the design or manufacture of the part.
