Welcome to E-XFL.COM

Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Details	
Product Status	Active
Number of LABs/CLBs	-
Number of Logic Elements/Cells	6144
Total RAM Bits	36864
Number of I/O	60
Number of Gates	250000
Voltage - Supply	1.14V ~ 1.575V
Mounting Type	Surface Mount
Operating Temperature	-40°C ~ 100°C (TJ)
Package / Case	81-WFBGA, CSBGA
Supplier Device Package	81-CSP (5x5)
Purchase URL	https://www.e-xfl.com/product-detail/microchip-technology/agln250v2-zcsg81i

2 – IGLOO nano DC and Switching Characteristics

General Specifications

The Z feature grade does not support the enhanced nano features of Schmitt trigger input, Flash*Freeze bus hold (hold previous I/O state in Flash*Freeze mode), cold-sparing, and hot-swap I/O capability. Refer to "IGLOO nano Ordering Information" on page IV for more information.

Operating Conditions

Stresses beyond those listed in Table 2-1 may cause permanent damage to the device.

Exposure to absolute maximum rating conditions for extended periods may affect device reliability. Absolute Maximum Ratings are stress ratings only; functional operation of the device at these or any other conditions beyond those listed under the Recommended Operating Conditions specified in Table 2-2 on page 2-2 is not implied.

Table 2-1 • **Absolute Maximum Ratings**

Symbol	Parameter	Limits	Units
VCC	DC core supply voltage	–0.3 to 1.65	V
VJTAG	JTAG DC voltage	–0.3 to 3.75	V
VPUMP	Programming voltage	–0.3 to 3.75	V
VCCPLL	Analog power supply (PLL)	–0.3 to 1.65	V
VCCI	DC I/O buffer supply voltage	–0.3 to 3.75	V
V_I[1]	I/O input voltage	–0.3 V to 3.6 V	V
T_{STG}[2]	Storage temperature	–65 to +150	°C
T_J[2]	Junction temperature	+125	°C

Notes:

1. *The device should be operated within the limits specified by the datasheet. During transitions, the input signal may undershoot or overshoot according to the limits shown in Table 2-4 on page 2-3.*
2. *For flash programming and retention maximum limits, refer to Table 2-3 on page 2-2, and for recommended operating limits, refer to Table 2-2 on page 2-2.*

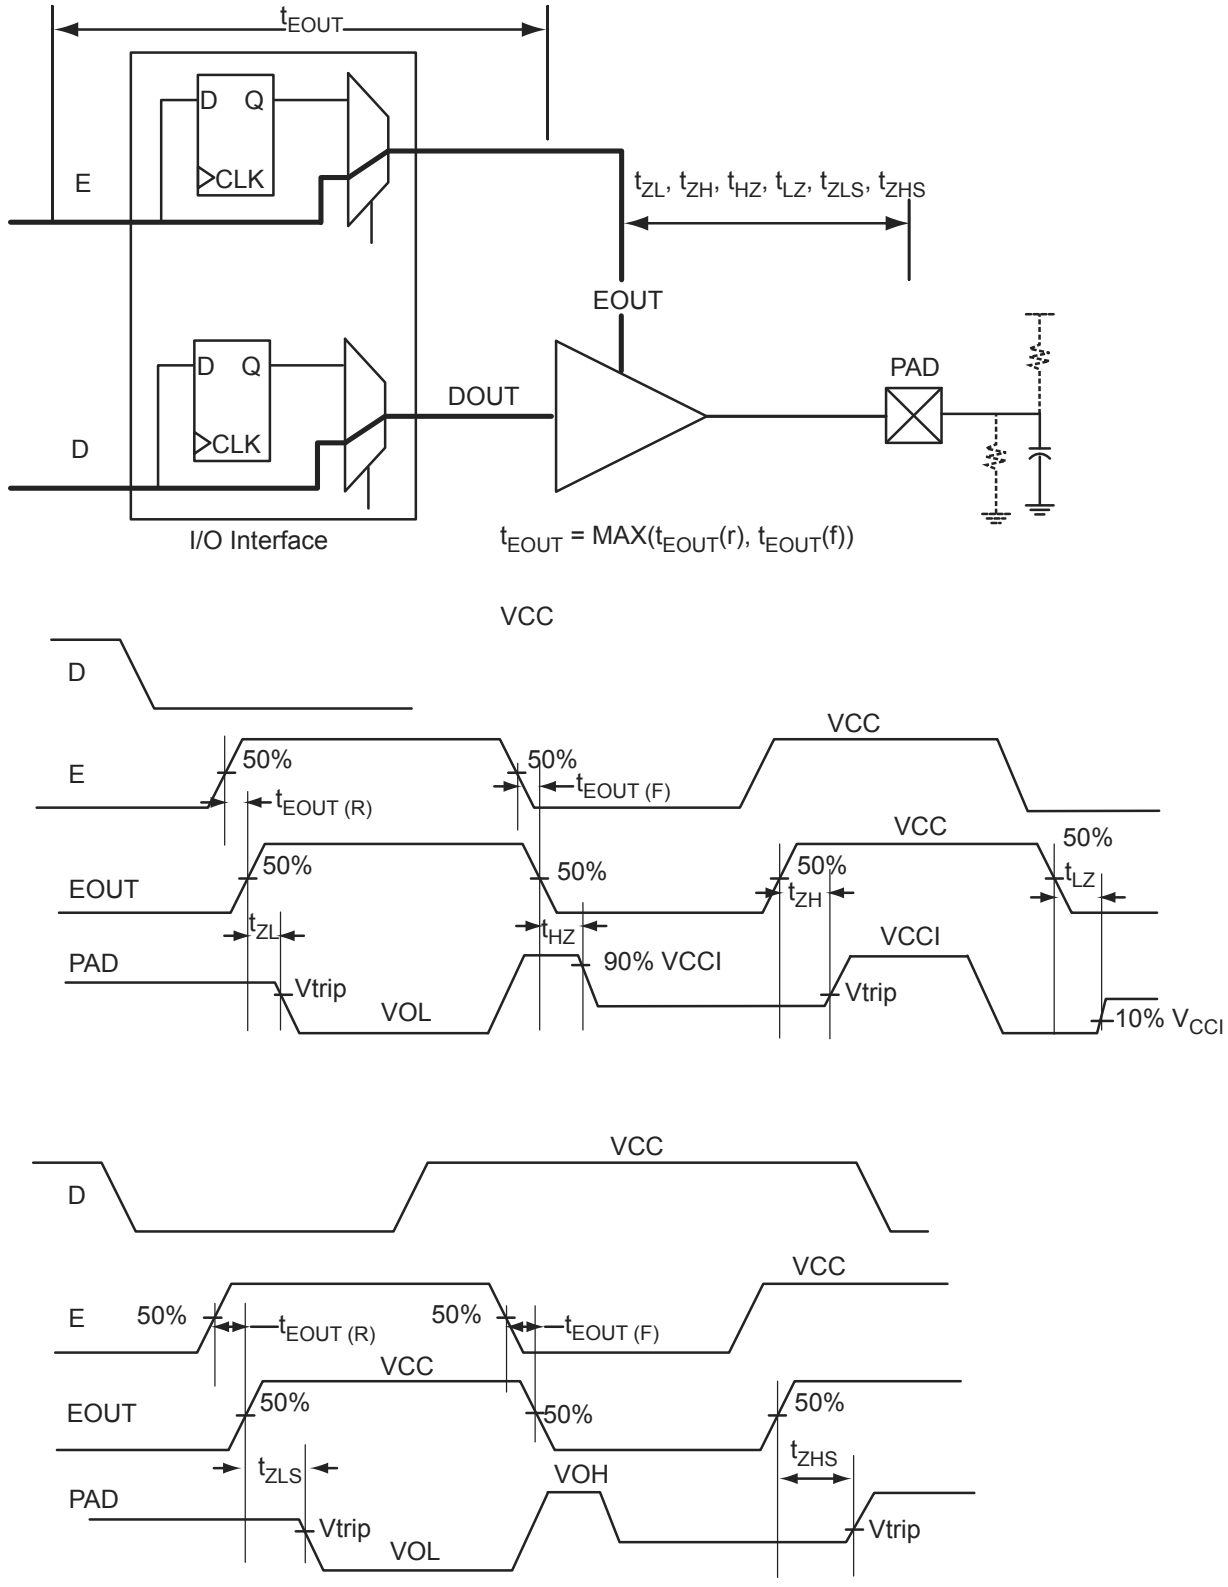

Figure 2-6 • **Tristate Output Buffer Timing Model and Delays (example)**

Summary of I/O Timing Characteristics – Default I/O Software Settings

Table 2-23 • **Summary of AC Measuring Points**

Standard	Measuring Trip Point (Vtrip)
3.3 V LVTTL / 3.3 V LVCMOS	1.4 V
3.3 V LVCMOS Wide Range	1.4 V
2.5 V LVCMOS	1.2 V
1.8 V LVCMOS	0.90 V
1.5 V LVCMOS	0.75 V
1.2 V LVCMOS	0.60 V
1.2 V LVCMOS Wide Range	0.60 V

Table 2-24 • **I/O AC Parameter Definitions**

Parameter	Parameter Definition
t_{DP}	Data to Pad delay through the Output Buffer
t_{PY}	Pad to Data delay through the Input Buffer
t_{DOUT}	Data to Output Buffer delay through the I/O interface
t_{EOUT}	Enable to Output Buffer Tristate Control delay through the I/O interface
t_{DIN}	Input Buffer to Data delay through the I/O interface
t_{HZ}	Enable to Pad delay through the Output Buffer—HIGH to Z
t_{ZH}	Enable to Pad delay through the Output Buffer—Z to HIGH
t_{LZ}	Enable to Pad delay through the Output Buffer—LOW to Z
t_{ZL}	Enable to Pad delay through the Output Buffer—Z to LOW
t_{ZHS}	Enable to Pad delay through the Output Buffer with delayed enable—Z to HIGH
t_{ZLS}	Enable to Pad delay through the Output Buffer with delayed enable—Z to LOW

The length of time an I/O can withstand IOSH/IOSL events depends on the junction temperature. The reliability data below is based on a 3.3 V, 8 mA I/O setting, which is the worst case for this type of analysis.

For example, at 100°C, the short current condition would have to be sustained for more than six months to cause a reliability concern. The I/O design does not contain any short circuit protection, but such protection would only be needed in extremely prolonged stress conditions.

Table 2-31 • **Duration of Short Circuit Event before Failure**

Temperature	Time before Failure
–40°C	> 20 years
–20°C	> 20 years
0°C	> 20 years
25°C	> 20 years
70°C	5 years
85°C	2 years
100°C	6 months

Table 2-32 • **Schmitt Trigger Input Hysteresis**
Hysteresis Voltage Value (Typ.) for Schmitt Mode Input Buffers

Input Buffer Configuration	Hysteresis Value (typ.)
3.3 V LVTTL / LVCMOS (Schmitt trigger mode)	240 mV
2.5 V LVCMOS (Schmitt trigger mode)	140 mV
1.8 V LVCMOS (Schmitt trigger mode)	80 mV
1.5 V LVCMOS (Schmitt trigger mode)	60 mV
1.2 V LVCMOS (Schmitt trigger mode)	40 mV

Table 2-33 • **I/O Input Rise Time, Fall Time, and Related I/O Reliability**

Input Buffer	Input Rise/Fall Time (min.)	Input Rise/Fall Time (max.)	Reliability
LVTTL/LVCMOS (Schmitt trigger disabled)	No requirement	10 ns *	20 years (100°C)
LVTTL/LVCMOS (Schmitt trigger enabled)	No requirement	No requirement, but input noise voltage cannot exceed Schmitt hysteresis.	20 years (100°C)

*Note: *The maximum input rise/fall time is related to the noise induced into the input buffer trace. If the noise is low, then the rise time and fall time of input buffers can be increased beyond the maximum value. The longer the rise/fall times, the more susceptible the input signal is to the board noise. Microsemi recommends signal integrity evaluation/characterization of the system to ensure that there is no excessive noise coupling into input signals.*

1.2 V DC Core Voltage

Table 2-73 • Input Data Register Propagation Delays
Commercial-Case Conditions: T_J = 70°C, Worst-Case VCC = 1.14 V

Parameter	Description	Std.	Units
t_{ICLKQ}	Clock-to-Q of the Input Data Register	0.68	ns
t_{ISUD}	Data Setup Time for the Input Data Register	0.97	ns
t_{IHD}	Data Hold Time for the Input Data Register	0.00	ns
t_{ICLR2Q}	Asynchronous Clear-to-Q of the Input Data Register	1.19	ns
t_{IPRE2Q}	Asynchronous Preset-to-Q of the Input Data Register	1.19	ns
$t_{IREMCLR}$	Asynchronous Clear Removal Time for the Input Data Register	0.00	ns
$t_{IRECCLR}$	Asynchronous Clear Recovery Time for the Input Data Register	0.24	ns
$t_{IREMPRE}$	Asynchronous Preset Removal Time for the Input Data Register	0.00	ns
$t_{IRECPRE}$	Asynchronous Preset Recovery Time for the Input Data Register	0.24	ns
t_{IWCLR}	Asynchronous Clear Minimum Pulse Width for the Input Data Register	0.19	ns
t_{IWPRE}	Asynchronous Preset Minimum Pulse Width for the Input Data Register	0.19	ns
$t_{ICKMPWH}$	Clock Minimum Pulse Width HIGH for the Input Data Register	0.31	ns
$t_{ICKMPWL}$	Clock Minimum Pulse Width LOW for the Input Data Register	0.28	ns

Note: For specific junction temperature and voltage supply levels, refer to Table 2-7 on page 2-7 for derating values.

1.2 V DC Core Voltage

Table 2-80 • Input DDR Propagation Delays
Commercial-Case Conditions: T_J = 70°C, Worst-Case VCC = 1.14 V

Parameter	Description	Std.	Units
$t_{DDRICLKQ1}$	Clock-to-Out Out_QR for Input DDR	0.76	ns
$t_{DDRICLKQ2}$	Clock-to-Out Out_QF for Input DDR	0.94	ns
$t_{DDRISUD1}$	Data Setup for Input DDR (negedge)	0.93	ns
$t_{DDRISUD2}$	Data Setup for Input DDR (posedge)	0.84	ns
$t_{DDRIHD1}$	Data Hold for Input DDR (negedge)	0.00	ns
$t_{DDRIHD2}$	Data Hold for Input DDR (posedge)	0.00	ns
$t_{DDRICLR2Q1}$	Asynchronous Clear-to-Out Out_QR for Input DDR	1.23	ns
$t_{DDRICLR2Q2}$	Asynchronous Clear-to-Out Out_QF for Input DDR	1.42	ns
$t_{DDRIREMCLR}$	Asynchronous Clear Removal Time for Input DDR	0.00	ns
$t_{DDRIRECCLR}$	Asynchronous Clear Recovery Time for Input DDR	0.24	ns
$t_{DDRIWCLR}$	Asynchronous Clear Minimum Pulse Width for Input DDR	0.19	ns
$t_{DDRICKMPWH}$	Clock Minimum Pulse Width HIGH for Input DDR	0.31	ns
$t_{DDRICKMPWL}$	Clock Minimum Pulse Width LOW for Input DDR	0.28	ns
$F_{DDRIMAX}$	Maximum Frequency for Input DDR	160.00	MHz

Note: For specific junction temperature and voltage supply levels, refer to Table 2-7 on page 2-7 for derating values.

VersaTile Specifications as a Sequential Module

The IGLOO nano library offers a wide variety of sequential cells, including flip-flops and latches. Each has a data input and optional enable, clear, or preset. In this section, timing characteristics are presented for a representative sample from the library. For more details, refer to the *IGLOO, ProASIC3, SmartFusion and Fusion Macro Library Guide for Software v10.1*.

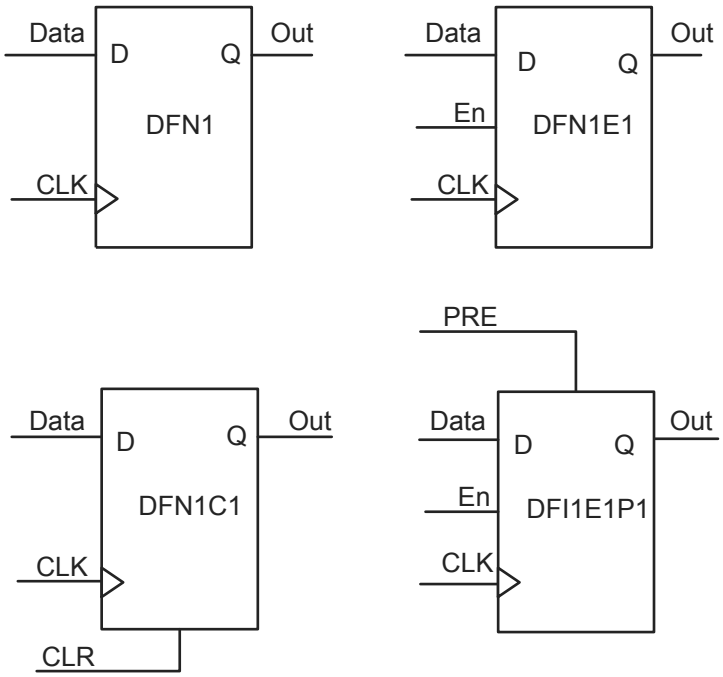

Figure 2-23 • **Sample of Sequential Cells**

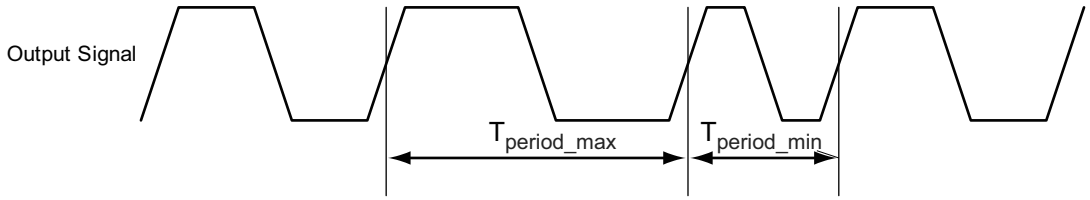

Note: Peak-to-peak jitter measurements are defined by $T_{peak\text{-}to\text{-}peak} = T_{period\_max} - T_{period\_min}$.

Figure 2-26 • **Peak-to-Peak Jitter Definition**

***Table 2-103* • RAM512X18**
Commercial-Case Conditions: T_J = 70°C, Worst-Case VCC = 1.425 V

Parameter	Description	Std.	Units

Revision	Changes	Page
Revision 12 (March 2012)	The "In-System Programming (ISP) and Security" section and "Security" section were revised to clarify that although no existing security measures can give an absolute guarantee, Microsemi FPGAs implement the best security available in the industry (SAR 34663).	I, 1-2
	Notes indicating that AGLN015 is not recommended for new designs have been added (SAR 35759). Notes indicating that nano-Z devices are not recommended for new designs have been added. The "Devices Not Recommended For New Designs" section is new (SAR 36759).	III, IV
Revision 12 (continued)	The Y security option and Licensed DPA Logo were added to the "IGLOO nano Ordering Information" section. The trademarked Licensed DPA Logo identifies that a product is covered by a DPA counter-measures license from Cryptography Research (SAR 34722).	IV
	The following sentence was removed from the "Advanced Architecture" section: "In addition, extensive on-chip programming circuitry enables rapid, single-voltage (3.3 V) programming of IGLOO nano devices via an IEEE 1532 JTAG interface" (SAR 34683).	1-3
	The "Specifying I/O States During Programming" section is new (SAR 34694).	1-9
	The reference to guidelines for global spines and VersaTile rows, given in the "Global Clock Contribution—P_{CLOCK}" section, was corrected to the "Spine Architecture" section of the Global Resources chapter in the *IGLOO nano FPGA Fabric User's Guide* (SAR 34732).	2-12
	Figure 2-4 has been modified for DIN waveform; the Rise and Fall time label has been changed to tDIN (37106).	2-16
	The AC Loading figures in the "Single-Ended I/O Characteristics" section were updated to match tables in the "Summary of I/O Timing Characteristics – Default I/O Software Settings" section (SAR 34885).	2-26, 2-20
	The notes regarding drive strength in the "Summary of I/O Timing Characteristics – Default I/O Software Settings" section, "3.3 V LVCMOS Wide Range" section and "1.2 V LVCMOS Wide Range" section tables were revised for clarification. They now state that the minimum drive strength for the default software configuration when run in wide range is ±100 µA. The drive strength displayed in software is supported in normal range only. For a detailed I/V curve, refer to the IBIS models (SAR 34765).	2-20, 2-29, 2-40
	Added values for minimum pulse width and removed the FRMAX row from Table 2-88 through Table 2-99 in the "Global Tree Timing Characteristics" section. Use the software to determine the FRMAX for the device you are using (SAR 36953).	2-64 to 2-69
	Table 2-100 • IGLOO nano CCC/PLL Specification and Table 2-101 • IGLOO nano CCC/PLL Specification were updated. A note was added indicating that when the CCC/PLL core is generated by Mircosemi core generator software, not all delay values of the specified delay increments are available (SAR 34817).	2-70 and 2-71
	The port names in the SRAM "Timing Waveforms", SRAM "Timing Characteristics" tables, Figure 2-36 • FIFO Reset, and the FIFO "Timing Characteristics" tables were revised to ensure consistency with the software names (SAR 35754). Reference was made to a new application note, *Simultaneous Read-Write Operations in Dual-Port SRAM for Flash-Based cSoCs and FPGAs*, which covers these cases in detail (SAR 34865).	2-74, 2-77, 2-85
	The "Pin Descriptions" chapter has been added (SAR 34770).	3-1
	Package names used in the "Package Pin Assignments" section were revised to match standards given in *Package Mechanical Drawings* (SAR 34770).	4-1

Datasheet Categories

Categories

In order to provide the latest information to designers, some datasheet parameters are published before data has been fully characterized from silicon devices. The data provided for a given device, as highlighted in the "IGLOO nano Device Status" table on page III, is designated as either "Product Brief," "Advance," "Preliminary," or "Production." The definitions of these categories are as follows:

Product Brief

The product brief is a summarized version of a datasheet (advance or production) and contains general product information. This document gives an overview of specific device and family information.

Advance

This version contains initial estimated information based on simulation, other products, devices, or speed grades. This information can be used as estimates, but not for production. This label only applies to the DC and Switching Characteristics chapter of the datasheet and will only be used when the data has not been fully characterized.

Preliminary

The datasheet contains information based on simulation and/or initial characterization. The information is believed to be correct, but changes are possible.

Unmarked (production)

This version contains information that is considered to be final.

Export Administration Regulations (EAR)

The products described in this document are subject to the Export Administration Regulations (EAR). They could require an approved export license prior to export from the United States. An export includes release of product or disclosure of technology to a foreign national inside or outside the United States.

Safety Critical, Life Support, and High-Reliability Applications Policy

The Microsemi products described in this advance status document may not have completed Microsemi's qualification process. Microsemi may amend or enhance products during the product introduction and qualification process, resulting in changes in device functionality or performance. It is the responsibility of each customer to ensure the fitness of any Microsemi product (but especially a new product) for a particular purpose, including appropriateness for safety-critical, life-support, and other high-reliability applications. Consult Microsemi's Terms and Conditions for specific liability exclusions relating to life-support applications. A reliability report covering all of the Microsemi SoC Products Group's products is at http://www.microsemi.com/socdocuments/ORT_Report.pdf. Microsemi also offers a variety of enhanced qualification and lot acceptance screening procedures. Contact your local Microsemi sales office for additional reliability information.
