What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

1.3 Differences between the R5F102 Products and the R5F103 Products

The following are differences between the R5F102 products and the R5F103 products.

- Whether the data flash memory is mounted or not
- High-speed on-chip oscillator oscillation frequency accuracy
- Number of channels in serial interface
- Whether the DMA function is mounted or not
- Whether a part of the safety functions are mounted or not

1.3.1 Data Flash

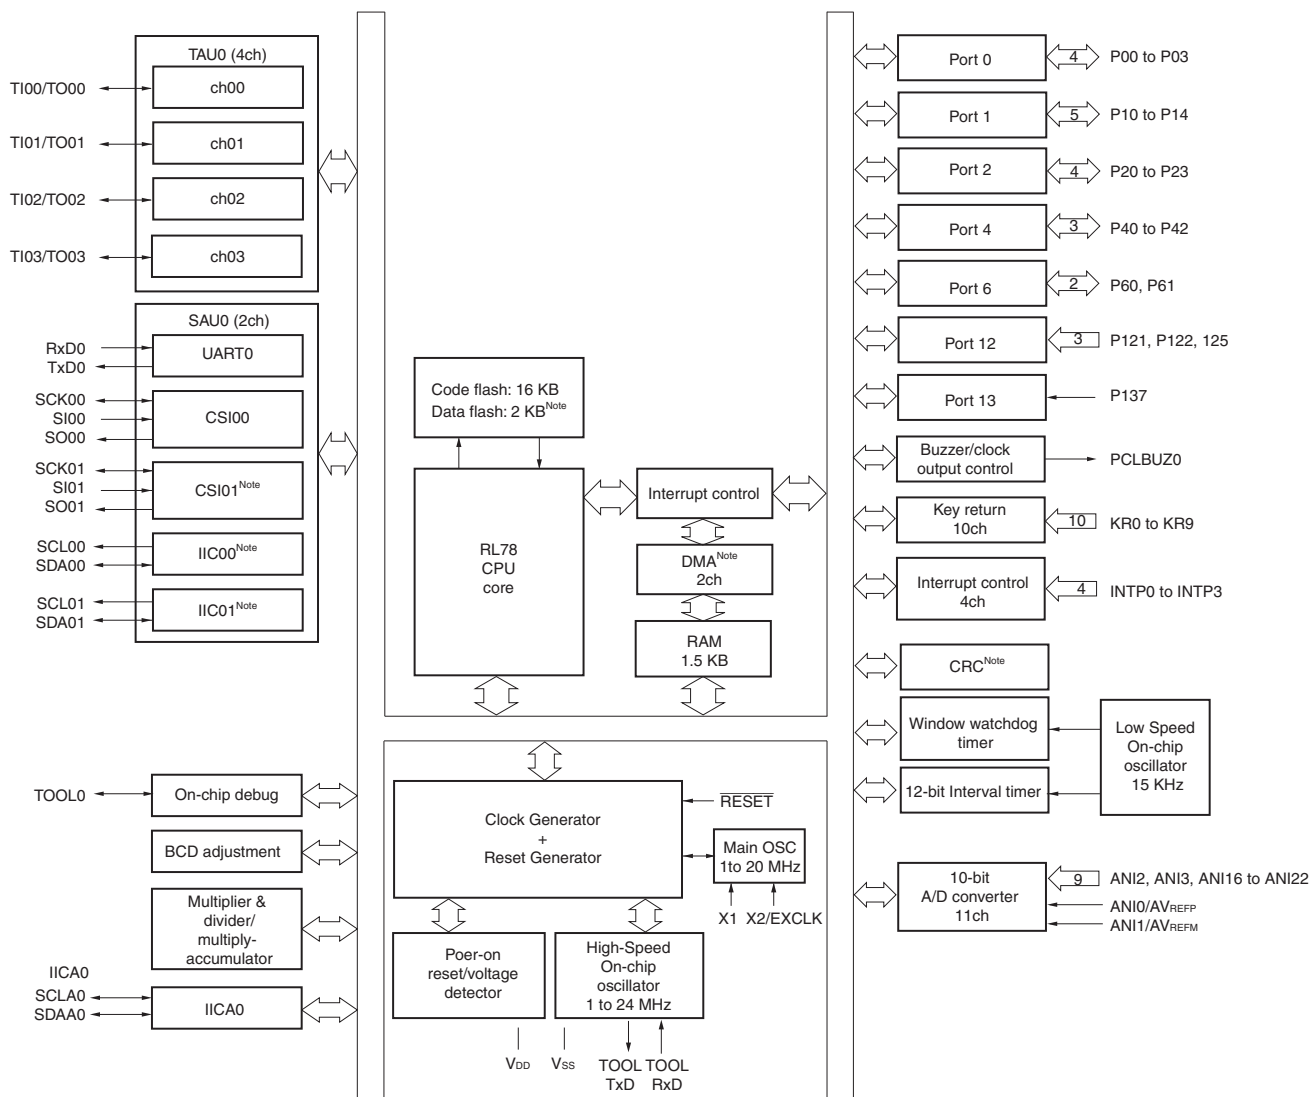

The data flash memory of 2 KB is mounted on the R5F102 products, but not on the R5F103 products.

Product	Data Flash
R5F102 products R5F1026A, R5F1027A, R5F102AA, R5F10269, R5F10279, R5F102A9, R5F10268, R5F10278, R5F102A8, R5F10267, R5F10277, R5F102A7, R5F10266 <small>Note</small>	2KB
R5F103 products R5F1036A, R5F1037A, R5F103AA, R5F10369, R5F10379, R5F103A9, R5F10368, R5F10378 R5F103A8, R5F10367, R5F10377, R5F103A7, R5F10366	Not mounted

Note The RAM in the R5F10266 has capacity as small as 256 bytes. Depending on the customer's program specification, the stack area to execute the data flash library may not be kept and data may not be written to or erased from the data flash memory.

Caution When the flash memory is rewritten via a user program, the code flash area and RAM area are used because each library is used. When using the library, refer to RL78 Family Flash Self Programming Library Type01 User's Manual and RL78 Family Data Flash Library Type04 User's Manual.

2.2 Oscillator Characteristics

2.2.1 X1 oscillator characteristics

($T_A = -40$ to $+85^\circ\text{C}$, $1.8\text{ V} \leq V_{DD} \leq 5.5\text{ V}$, $V_{SS} = 0\text{ V}$)

Parameter	Resonator	Conditions	MIN.	TYP.	MAX.	Unit
X1 clock oscillation frequency (f_x) ^{Note}	Ceramic resonator / crystal oscillator	$2.7\text{ V} \leq V_{DD} \leq 5.5\text{ V}$	1.0		20.0	MHz
		$1.8\text{ V} \leq V_{DD} < 2.7\text{ V}$	1.0		8.0	

Note Indicates only permissible oscillator frequency ranges. Refer to AC Characteristics for instruction execution time. Request evaluation by the manufacturer of the oscillator circuit mounted on a board to check the oscillator characteristics.

Caution Since the CPU is started by the high-speed on-chip oscillator clock after a reset release, check the X1 clock oscillation stabilization time using the oscillation stabilization time counter status register (OSTC) by the user. Determine the oscillation stabilization time of the OSTC register and the oscillation stabilization time select register (OSTS) after sufficiently evaluating the oscillation stabilization time with the resonator to be used.

Remark When using the X1 oscillator, refer to **5.4 System Clock Oscillator**.
