What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

1.3 Differences between the R5F102 Products and the R5F103 Products

The following are differences between the R5F102 products and the R5F103 products.

- Whether the data flash memory is mounted or not
- High-speed on-chip oscillator oscillation frequency accuracy
- Number of channels in serial interface
- Whether the DMA function is mounted or not
- Whether a part of the safety functions are mounted or not

1.3.1 Data Flash

The data flash memory of 2 KB is mounted on the R5F102 products, but not on the R5F103 products.

Product	Data Flash
R5F102 products R5F1026A, R5F1027A, R5F102AA, R5F10269, R5F10279, R5F102A9, R5F10268, R5F10278, R5F102A8, R5F10267, R5F10277, R5F102A7, R5F10266 Note	2KB
R5F103 products R5F1036A, R5F1037A, R5F103AA, R5F10369, R5F10379, R5F103A9, R5F10368, R5F10378 R5F103A8, R5F10367, R5F10377, R5F103A7, R5F10366	Not mounted

Note The RAM in the R5F10266 has capacity as small as 256 bytes. Depending on the customer's program specification, the stack area to execute the data flash library may not be kept and data may not be written to or erased from the data flash memory.

Caution When the flash memory is rewritten via a user program, the code flash area and RAM area are used because each library is used. When using the library, refer to RL78 Family Flash Self Programming Library Type01 User's Manual and RL78 Family Data Flash Library Type04 User's Manual.

<R> 2. ELECTRICAL SPECIFICATIONS (T_A = –40 to +85°C)

<R> This chapter describes the following electrical specifications.

Target products A: Consumer applications T_A = -40 to +85°C

<R> R5F102xxAxx, R5F103xxAxx

D: Industrial applications T_A = -40 to +85°C

<R> R5F102xxDxx, R5F103xxDxx

G: Industrial applications when T_A = -40 to +105°C products is used in the range of T_A = -40 to +85°C

<R> R5F102xxGxx

Cautions 1. The RL78 microcontrollers have an on-chip debug function, which is provided for development and evaluation. Do not use the on-chip debug function in products designated for mass production, because the guaranteed number of rewritable times of the flash memory may be exceeded when this function is used, and product reliability therefore cannot be guaranteed. Renesas Electronics is not liable for problems occurring when the on-chip debug function is used.

2. The pins mounted depend on the product. Refer to 2.1 Port Functions to 2.2.1 Functions for each product.

Notes 1. 30-pin product only.

2. Connect the REGC pin to V_{SS} via a capacitor (0.47 to 1 μF). This value determines the absolute maximum rating of the REGC pin. Do not use it with voltage applied.

3. Must be 6.5 V or lower.

4. Do not exceed $AV_{REF}(+)$ + 0.3 V in case of A/D conversion target pin.

5. 24-pin products only.

Caution Product quality may suffer if the absolute maximum rating is exceeded even momentarily for any parameter. That is, the absolute maximum ratings are rated values at which the product is on the verge of suffering physical damage, and therefore the product must be used under conditions that ensure that the absolute maximum ratings are not exceeded.

Remarks 1. Unless specified otherwise, the characteristics of alternate-function pins are the same as those of the port pins.

2. $AV_{REF}(+)$: + side reference voltage of the A/D converter.

3. V_{SS} : Reference voltage
