Welcome to [E-XFL.COM](#)**Understanding [Embedded - CPLDs \(Complex Programmable Logic Devices\)](#)**

Embedded - CPLDs, or Complex Programmable Logic Devices, are highly versatile digital logic devices used in electronic systems. These programmable components are designed to perform complex logical operations and can be customized for specific applications. Unlike fixed-function ICs, CPLDs offer the flexibility to reprogram their configuration, making them an ideal choice for various embedded systems. They consist of a set of logic gates and programmable interconnects, allowing designers to implement complex logic circuits without needing custom hardware.

**Applications of Embedded - CPLDs****Details**

Product Status	Obsolete
Programmable Type	In System Programmable
Delay Time tpd(1) Max	15 ns
Voltage Supply - Internal	4.5V ~ 5.5V
Number of Logic Elements/Blocks	-
Number of Macrocells	320
Number of Gates	-
Number of I/O	192
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	256-LBGA
Supplier Device Package	256-SBGA (27x27)
Purchase URL	<a href="https://www.e-xfl.com/product-detail/lattice-semiconductor/m5-320-192-15sai">https://www.e-xfl.com/product-detail/lattice-semiconductor/m5-320-192-15sai</a>

**Note:**

1. "M5-xxxx" is for 5-V devices. "M5LV-xxxx" is for 3.3-V devices.

## GENERAL DESCRIPTION

The MACH® 5 family consists of a broad range of high-density and high-I/O Complex Programmable Logic Devices (CPLDs). The fifth-generation MACH architecture yields fast speeds at high CPLD densities, low power, and supports additional features such as in-system programmability, Boundary Scan testability, and advanced clocking options (Table 1). The MACH 5 family offers 5-V (M5-xxx) and 3.3-V (M5LV-xxx) operation.

Manufactured in state-of-the-art ISO 9000 qualified fabrication facilities on E<sup>2</sup>CMOS process technologies, MACH 5 devices are available with pin-to-pin delays as fast as 5.5 ns (Table 2). The 5.5, 6.5, 7.5, 10, and 12-ns devices are compliant with the *PCI Local Bus Specification*.

Table 2. MACH 5 Speed Grades

Device	Speed Grade <sup>1</sup>						
	-5	-6	-7	-10	-12	-15	-20
M5-128 <sup>2</sup>			C	C, I	C, I	C, I	I

M5LV-512		C	C, I	C, I	C, I	C, I	I

**Note:**

1. C = Commercial grade, I = Industrial grade
2. /1 version recommended for new designs

With Lattice's unique hierarchical architecture, the MACH 5 family provides densities up to 512 macrocells to support full system logic integration. Extensive routing resources ensure pinout retention as well as high utilization. It is ideal for PAL® block device integration and a wide range of other applications including high-speed computing, low-power applications, communications, and embedded control. At each macrocell density point, Lattice offers several I/O and package options to meet a wide range of design needs (Table 3).

**Note:**

1. The I/O options indicated with a "\*" are obsolete, please contact factory for more information.

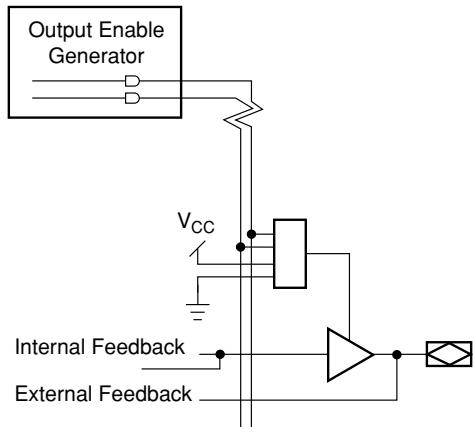

Advanced power management options allow designers to incrementally reduce power while maintaining the level of performance needed for today's complex designs. I/O safety features allow for mixed-voltage design,

## OE Generator

There is one output enable (OE) generator per PAL block that generates two product-term driven output enables. Each I/O cell is simply an output buffer. Each I/O cell within the PAL block can choose to be permanently enabled, permanently disabled, or choose one of the two product term output enables per PAL block (Figure 6).

20446G-006

Figure 6. Output Enable Generator and I/O Cell

## MACH 5 TIMING MODEL

The primary focus of the MACH 5 timing model is to accurately represent the timing in a MACH 5 device, and at the same time, be easy to understand. This model accurately describes all combinatorial and registered paths through the device, making a distinction between **internal feedback** and **external feedback**. A signal uses internal feedback when it is fed back into the switch matrix or block without having to go through the output buffer. The input register specifications are also reported as internal feedback. When a signal is fed back into the switch matrix after having gone through the output buffer, it is using external feedback.

The parameter,  $t_{BUF}$  is defined as the time it takes to go through the output buffer to the I/O pad. If a signal goes to the internal feedback rather than to the I/O pad, the parameter designator is followed by an “i”. By adding  $t_{BUF}$  to this internal parameter, the external parameter is derived. For example,  $t_{PD} = t_{PDI} + t_{BUF}$ . A diagram representing the modularized MACH 5 timing model is shown in Figure 7. Refer to the Technical Note entitled *MACH 5 Timing and High Speed Design* for a more detailed discussion about the timing parameters.

## CAPACITANCE<sup>1</sup>

Parameter Symbol	Parameter Description	Test conditions		Typ	Unit
$C_{IN}$	I/CLK pin	$V_{IN} = 2.0\text{ V}$	$3.3\text{ V or }5\text{ V}, 25^\circ\text{ C}, 1\text{ MHz}$	12	pF
$C_{I/O}$	I/O pin	$V_{OUT} = 2.0\text{ V}$	$3.3\text{ V or }5\text{ V}, 25^\circ\text{ C}, 1\text{ MHz}$	10	pF

1. These parameters are not 100% tested, but are calculated at initial characterization and at any time the design is modified where these parameters may be affected.

## $I_{CC}$ vs. FREQUENCY

These curves represent the typical power consumption for a particular device at system frequency. The selected “typical” pattern is a 16-bit up-down counter. This pattern fills the device and exercises every macrocell. Maximum frequency shown uses internal feedback and a D-type register. Power/Speed are optimized to obtain the highest counter frequency and the lowest power. The highest frequency (LSBs) is placed in common PAL blocks, which are set to high power. The lowest frequency signals (MSBs) are placed in a common PAL block and set to lowest power. For a more detailed discussion about MACH 5 power consumption, refer to the application note entitled *MACH 5 Power* in the Application Notes section on the Lattice Data Book CD-ROM or Lattice web site.

### Pin Designations

- CLK = Clock
- GND = Ground
- I = Input
- I/O = Input/Output
- NC = No Connect
- V<sub>CC</sub> = Supply Voltage
- TDI = Test Data In
- TCK = Test Clock
- TMS = Test Mode Select
- TDO = Test Data Out

## 5V M5 ORDERING INFORMATION<sup>1,2</sup>

Lattice standard products are available in several packages and operating ranges. The order number (Valid Combination) is formed by a combination of the elements below.

**Note:**

1. See below for valid device/package combinations.
2. M5-128/1, M5-192/1 and M5-256/1 recommended for new designs.

Valid Combinations		
M5-128/68		YC, VC, YI, VI
M5-128/104		YC <sup>1</sup> , YI <sup>1</sup>
M5-128/120	Commercial:	YC, YI
M5-192/68	-5, -7, -10, -12, -15	VC, VI
M5-192/120	Industrial:	YC, YI
M5-256/68	-7, -10, -12, -15, -20	VC, VI
M5-256/120		YC, YI
M5-256/160		YC, YI

### Device Marking

Actual device marking differs from the ordering part number (OPN). All MACH devices are dual-marked with both Commercial and Industrial grades. The Industrial grade is slower, i.e., M5-512/256-7AC-10AI.

1. M5-128/104-xxYC/1 and M5-128/104-xxYI/1 have been discontinued per PCN #06-07. Contact Rochester Electronics for available inventory.

Valid Combinations		
M5-320/160	Commercial:	YC, YI
M5-320/192		SAC, SAI
M5-384/160	-6, -7, -10, -12, -15	YC, YI
M5-512/160	Industrial:	YC, YI
M5-512/256	-7, -10, -12, -15, -20	SAC, SAI

### Valid Combinations

Valid Combinations list configurations planned to be supported in volume for this device. Consult the local Lattice sales office to confirm availability of specific valid combinations and to check on newly released combinations.
