Welcome to [E-XFL.COM](#)**Understanding Embedded - CPLDs (Complex Programmable Logic Devices)**

Embedded - CPLDs, or Complex Programmable Logic Devices, are highly versatile digital logic devices used in electronic systems. These programmable components are designed to perform complex logical operations and can be customized for specific applications. Unlike fixed-function ICs, CPLDs offer the flexibility to reprogram their configuration, making them an ideal choice for various embedded systems. They consist of a set of logic gates and programmable interconnects, allowing designers to implement complex logic circuits without needing custom hardware.

Applications of Embedded - CPLDs**Details**

Product Status	Obsolete
Programmable Type	In System Programmable
Delay Time tpd(1) Max	20 ns
Voltage Supply - Internal	4.5V ~ 5.5V
Number of Logic Elements/Blocks	-
Number of Macrocells	512
Number of Gates	-
Number of I/O	256
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	352-LBGA
Supplier Device Package	352-SBGA (35x35)
Purchase URL	https://www.e-xfl.com/product-detail/lattice-semiconductor/m5-512-256-20sai

**Select devices have been discontinued.
See Ordering Information section for product status.**

Note:

1. "M5-xxxx" is for 5-V devices. "M5LV-xxxx" is for 3.3-V devices.

GENERAL DESCRIPTION

The MACH® 5 family consists of a broad range of high-density and high-I/O Complex Programmable Logic Devices (CPLDs). The fifth-generation MACH architecture yields fast speeds at high CPLD densities, low power, and supports additional features such as in-system programmability, Boundary Scan testability, and advanced clocking options (Table 1). The MACH 5 family offers 5-V (M5-xxx) and 3.3-V (M5LV-xxx) operation.

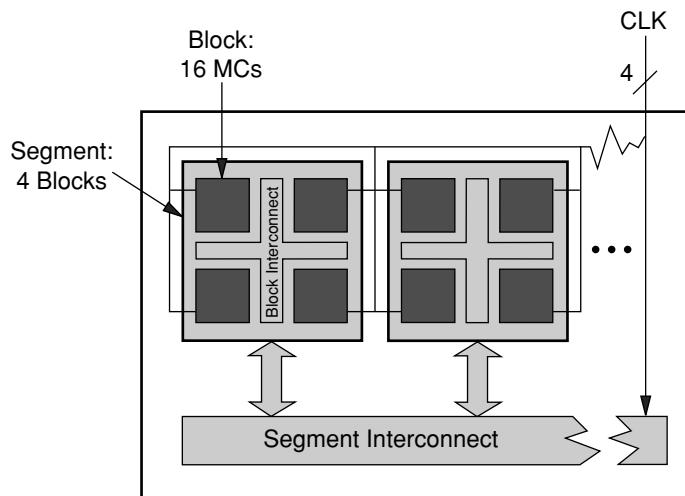

Manufactured in state-of-the-art ISO 9000 qualified fabrication facilities on E²CMOS process technologies, MACH 5 devices are available with pin-to-pin delays as fast as 5.5 ns (Table 2). The 5.5, 6.5, 7.5, 10, and 12-ns devices are compliant with the *PCI Local Bus Specification*.

Select devices have been discontinued.
See Ordering Information section for product status.

and both the 3.3-V and the 5-V device versions are in-system programmable through an IEEE 1149.1 Test Access Port (TAP) interface.

FUNCTIONAL DESCRIPTION

The MACH 5 architecture consists of PAL blocks connected by two levels of interconnect. The **block interconnect** provides routing among 4 PAL blocks. This grouping of PAL blocks joined by the block interconnect is called a **segment**. The second level of interconnect, the **segment interconnect**, ties all of the segments together. The only logic difference between any two MACH 5 devices is the number of segments. Therefore, once a designer is familiar with one device, consistent performance can be expected across the entire family. All devices have four clock pins available which can also be used as logic inputs.

20446G-001

Figure 1. MACH 5 Block Diagram

The MACH 5 PAL blocks consist of the elements listed below (Figure 2). While each PAL block resembles an independent PAL device, it has superior control and logic generation capabilities.

- ◆ I/O cells
- ◆ Product-term array and Logic Allocator
- ◆ Macrocells
- ◆ Register control generator
- ◆ Output enable generator

I/O Cells

The I/Os associated with each PAL block have a path directly back to that PAL block called **local feedback**. If the I/O is used in another PAL block, the **interconnect feeder** assigns a **block interconnect** line to that signal. The interconnect feeder acts as an input switch matrix. The block and segment interconnects provide connections between any two signals in a device. The **block feeder** assigns block interconnect lines and local feedback lines to the PAL block inputs.

Macrocells

The macrocells for MACH 5 devices consist of a storage element which can be configured for combinatorial, registered or latched operation (Figure 3). The D-type flip-flops can be configured as T-type, J-K, or S-R operation through the use of the XOR gate associated with each macrocell.

Each PAL block has the capability to provide two input registers by using macrocells 0 and 15. In order to use this option, these macrocells must be accessed via the I/O pins associated with macrocells 3 and 12, respectively. Once the macrocell is used as an input register, it cannot be used for logic, so its clusters can be re-directed through the logic allocator to another macrocell. The

I/O pins associated with macrocells 0 and 15 can still be used as input pins. Although the I/O pins for macrocells 3 and 12 are used to connect to the input registers, these macrocells can still be used as “buried” macrocells to drive device logic via the matrix.

20446G-003

Figure 3. Macrocell Diagram

Control Generator

The control generator provides four configurable clock lines and three configurable set/reset lines to each macrocell in a PAL block. Any of the four clock lines and any of the three set/reset lines can be independently selected by any flip-flop within a block. The clock lines can be configured to provide synchronous global (pin) clocks and asynchronous product term clocks, sum term clocks, and latch enables (Figure 4). Three of the four global clocks, as well as two product-term clocks and one sum-term clock, are available per PAL block. Positive or negative edge clocking is available as well as advanced clocking features such as **complementary** and **biphase** clocking. Complementary clocking provides two clock lines exactly 180 degrees out of phase, and is useful in applications such as fast data paths. A biphase clock line clocks flip-flops on both the positive and negative edges of the clock. The configuration options for the four clock lines per PAL block are as follows:

Clock Line 0 Options

- ◆ Global clock (0, 1, 2, or 3) with positive or negative edge clock enable
- ◆ Product-term clock (A^*B^*C)
- ◆ Sum-term clock ($A+B+C$)

Clock Line 1 Options

- ◆ Global clock (0, 1, 2, or 3) with positive edge clock enable
- ◆ Global clock (0, 1, 2, or 3) with negative edge clock enable

Select devices have been discontinued.
See Ordering Information section for product status.

OE Generator

There is one output enable (OE) generator per PAL block that generates two product-term driven output enables. Each I/O cell is simply an output buffer. Each I/O cell within the PAL block can choose to be permanently enabled, permanently disabled, or choose one of the two product term output enables per PAL block (Figure 6).

20446G-006

Figure 6. Output Enable Generator and I/O Cell

MACH 5 TIMING MODEL

The primary focus of the MACH 5 timing model is to accurately represent the timing in a MACH 5 device, and at the same time, be easy to understand. This model accurately describes all combinatorial and registered paths through the device, making a distinction between **internal feedback** and **external feedback**. A signal uses internal feedback when it is fed back into the switch matrix or block without having to go through the output buffer. The input register specifications are also reported as internal feedback. When a signal is fed back into the switch matrix after having gone through the output buffer, it is using external feedback.

The parameter, t_{BUF} is defined as the time it takes to go through the output buffer to the I/O pad. If a signal goes to the internal feedback rather than to the I/O pad, the parameter designator is followed by an “i”. By adding t_{BUF} to this internal parameter, the external parameter is derived. For example, $t_{PD} = t_{PDI} + t_{BUF}$. A diagram representing the modularized MACH 5 timing model is shown in Figure 7. Refer to the Technical Note entitled *MACH 5 Timing and High Speed Design* for a more detailed discussion about the timing parameters.

ABSOLUTE MAXIMUM RATINGS

M5LV

Storage Temperature.....	-65°C to +150°C
Device Junction Temperature.....	+130°C
Supply Voltage with Respect to Ground	-0.5 V to +4.5 V
DC Input Voltage	-0.5 V to 5.5 V
Static Discharge Voltage.....	2000 V
Latchup Current (-40°C to +85°C)	200 mA

Stresses above those listed under Absolute Maximum Ratings may cause permanent device failure. Functionality at or above these limits is not implied. Exposure to Absolute Maximum Ratings for extended periods may affect device reliability.

OPERATING RANGES

Commercial (C) Devices

Ambient Temperature (T_A)	
Operating in Free Air.....	0°C to +70°C
Supply Voltage (V_{CC}) with Respect to Ground.....	+3.0 V to +3.6 V

Industrial (I) Devices

Ambient Temperature (T_A)	
Operating in Free Air.....	40°C to +85°C
Supply Voltage (V_{CC}) with Respect to Ground.....	+3.0 V to +3.6 V
<i>Operating ranges define those limits between which the functionality of the device is guaranteed.</i>	

3.3-V DC CHARACTERISTICS OVER OPERATING RANGES

Parameter Symbol	Parameter Description	Test Description		Min	Max	Unit
V_{OH}	Output HIGH Voltage	$V_{CC} = \text{Min}$	$I_{OH} = -100 \mu\text{A}$	$V_{CC} = 0.2$		V
		$V_{IN} = V_{IH} \text{ or } V_{IL}$	$I_{OH} = 3.2 \text{ mA}$	2.4		V
V_{OL}	Output LOW Voltage	$V_{CC} = \text{Min}$	$I_{OL} = 100 \mu\text{A}$		0.2	V
		$V_{IN} = V_{IH} \text{ or } V_{IL}$	$I_{OL} = 16 \text{ mA } (\text{Note 1})$		0.5	V
V_{IH}	Input HIGH Voltage	$V_{OUT} \geq V_{OH} \text{ Min or } V_{OUT} \leq V_{OL} \text{ Max } (\text{Note 2})$		2.0	5.5	V
V_{IL}	Input LOW Voltage	$V_{OUT} \geq V_{OH} \text{ Min or } V_{OUT} \leq V_{OL} \text{ Max } (\text{Note 2})$		-0.3	0.8	V
I_{IH}	Input HIGH Leakage Current	$V_{IN} = 3.6, V_{CC} = \text{Max } (\text{Note 3})$			10	μA
I_{IL}	Input LOW Leakage Current	$V_{IN} = 0, V_{CC} = \text{Max } (\text{Note 3})$			-10	μA
I_{OZH}	Off-State Output Leakage Current HIGH	$V_{OUT} = 3.6, V_{CC} = \text{Max}, V_{IN} = V_{IH} \text{ or } V_{IL} \text{ (Note 3)}$			10	μA
I_{OZL}	Off-State Output Leakage Current LOW	$V_{OUT} = 0, V_{CC} = \text{Max}, V_{IN} = V_{IH} \text{ or } V_{IL} \text{ (Note 3)}$			-10	μA
I_{SC}	Output Short-Circuit Current	$V_{OUT} = 0.5 V_{CC} = \text{Max}, V_{IN} = V_{IH} \text{ or } V_{IL} \text{ (Note 4)}$		-15	-160	mA

Notes:

1. Total I_{OL} between ground pins should not exceed 64 mA.
2. These are absolute values with respect to device ground, and all overshoots due to system and/or tester noise are included.
3. I/O pin leakage is the worst case of I_{IL} and I_{OZL} or I_{IH} and I_{OZH} .
4. Not more than one output should be shorted at one time. Duration of the short-circuit should not exceed one second.

See Ordering Information section for product status.

CAPACITANCE¹

Parameter Symbol	Parameter Description	Test conditions		Typ	Unit
C_{IN}	I/CLK pin	$V_{IN} = 2.0\text{ V}$	$3.3\text{ V or }5\text{ V}, 25^\circ\text{ C}, 1\text{ MHz}$	12	pF
$C_{I/O}$	I/O pin	$V_{OUT} = 2.0\text{ V}$	$3.3\text{ V or }5\text{ V}, 25^\circ\text{ C}, 1\text{ MHz}$	10	pF

1. These parameters are not 100% tested, but are calculated at initial characterization and at any time the design is modified where these parameters may be affected.

I_{CC} vs. FREQUENCY

These curves represent the typical power consumption for a particular device at system frequency. The selected “typical” pattern is a 16-bit up-down counter. This pattern fills the device and exercises every macrocell. Maximum frequency shown uses internal feedback and a D-type register. Power/Speed are optimized to obtain the highest counter frequency and the lowest power. The highest frequency (LSBs) is placed in common PAL blocks, which are set to high power. The lowest frequency signals (MSBs) are placed in a common PAL block and set to lowest power. For a more detailed discussion about MACH 5 power consumption, refer to the application note entitled *MACH 5 Power* in the Application Notes section on the Lattice Data Book CD-ROM or Lattice web site.

5V M5 ORDERING INFORMATION^{1,2}

Lattice standard products are available in several packages and operating ranges. The order number (Valid Combination) is formed by a combination of the elements below.

Note:

1. See below for valid device/package combinations.
2. M5-128/1, M5-192/1 and M5-256/1 recommended for new designs.

Valid Combinations		
M5-128/68		YC, VC, YI, VI
M5-128/104		YC ¹ , YI ¹
M5-128/120	Commercial:	YC, YI
M5-192/68	-5, -7, -10, -12, -15	VC, VI
M5-192/120	Industrial:	YC, YI
M5-256/68	-7, -10, -12, -15, -20	VC, VI
M5-256/120		YC, YI
M5-256/160		YC, YI

Device Marking

Actual device marking differs from the ordering part number (OPN). All MACH devices are dual-marked with both Commercial and Industrial grades. The Industrial grade is slower, i.e., M5-512/256-7AC-10AI.

1. M5-128/104-xxYC/1 and M5-128/104-xxYI/1 have been discontinued per PCN #06-07. Contact Rochester Electronics for available inventory.

Valid Combinations		
M5-320/160	Commercial:	YC, YI
M5-320/192		SAC, SAI
M5-384/160	-6, -7, -10, -12, -15	YC, YI
M5-512/160	Industrial:	YC, YI
M5-512/256	-7, -10, -12, -15, -20	SAC, SAI

Valid Combinations

Valid Combinations list configurations planned to be supported in volume for this device. Consult the local Lattice sales office to confirm availability of specific valid combinations and to check on newly released combinations.
