

Welcome to E-XFL.COM

Understanding Embedded - CPLDs (Complex Programmable Logic Devices)

Embedded - CPLDs, or Complex Programmable Logic Devices, are highly versatile digital logic devices used in electronic systems. These programmable components are designed to perform complex logical operations and can be customized for specific applications. Unlike fixed-function ICs, CPLDs offer the flexibility to reprogram their configuration, making them an ideal choice for various embedded systems. They consist of a set of logic gates and programmable interconnects, allowing designers to implement complex logic circuits without needing custom hardware.

Applications of Embedded - CPLDs

Details

Product Status	Obsolete
Programmable Type	In System Programmable
Delay Time tpd(1) Max	15 ns
Voltage Supply - Internal	3V ~ 3.6V
Number of Logic Elements/Blocks	-
Number of Macrocells	128
Number of Gates	-
Number of I/O	120
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	160-BQFP
Supplier Device Package	160-PQFP (28x28)
Purchase URL	https://www.e-xfl.com/product-detail/lattice-semiconductor/m5lv-128-120-15yi

Table 2. MACH 5 Speed Grades

Note:

1. C = Commercial grade, I = Industrial grade
2. /1 version recommended for new designs

With Lattice’s unique hierarchical architecture, the MACH 5 family provides densities up to 512 macrocells to support full system logic integration. Extensive routing resources ensure pinout retention as well as high utilization. It is ideal for PAL[®] block device integration and a wide range of other applications including high-speed computing, low-power applications, communications, and embedded control. At each macrocell density point, Lattice offers several I/O and package options to meet a wide range of design needs (Table 3).

Note:

1. The I/O options indicated with a “*” are obsolete, please contact factory for more information.

Advanced power management options allow designers to incrementally reduce power while maintaining the level of performance needed for today’s complex designs. I/O safety features allow for mixed-voltage design,

Select devices have been discontinued. See Ordering Information section for product status.

Macrocells

The macrocells for MACH 5 devices consist of a storage element which can be configured for combinatorial, registered or latched operation (Figure 3). The D-type flip-flops can be configured as T-type, J-K, or S-R operation through the use of the XOR gate associated with each macrocell.

Each PAL block has the capability to provide two input registers by using macrocells 0 and 15. In order to use this option, these macrocells must be accessed via the I/O pins associated with macrocells 3 and 12, respectively. Once the macrocell is used as an input register, it cannot be used for logic, so its clusters can be re-directed through the logic allocator to another macrocell. The

I/O pins associated with macrocells 0 and 15 can still be used as input pins. Although the I/O pins for macrocells 3 and 12 are used to connect to the input registers, these macrocells can still be used as “buried” macrocells to drive device logic via the matrix.

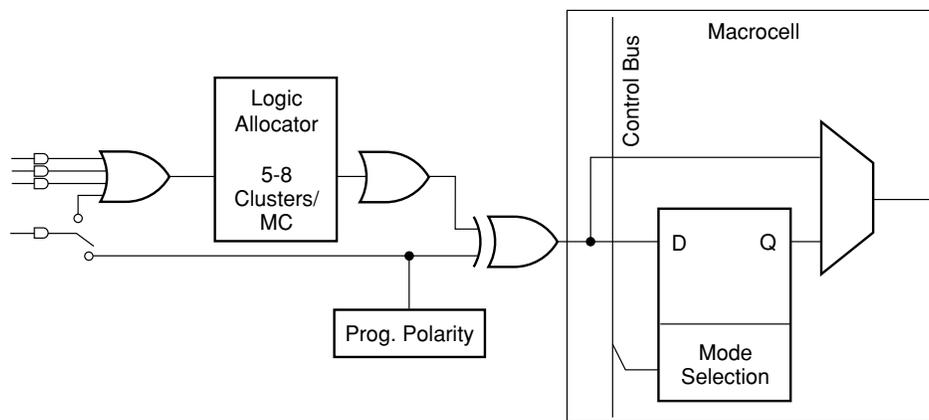

Figure 3. Macrocell Diagram

20446G-003

Control Generator

The control generator provides four configurable clock lines and three configurable set/reset lines to each macrocell in a PAL block. Any of the four clock lines and any of the three set/reset lines can be independently selected by any flip-flop within a block. The clock lines can be configured to provide synchronous global (pin) clocks and asynchronous product term clocks, sum term clocks, and latch enables (Figure 4). Three of the four global clocks, as well as two product-term clocks and one sum-term clock, are available per PAL block. Positive or negative edge clocking is available as well as advanced clocking features such as **complementary** and **biphase** clocking. Complementary clocking provides two clock lines exactly 180 degrees out of phase, and is useful in applications such as fast data paths. A biphase clock line clocks flip-flops on both the positive and negative edges of the clock. The configuration options for the four clock lines per PAL block are as follows:

Clock Line 0 Options

- ◆ Global clock (0, 1, 2, or 3) with positive or negative edge clock enable
- ◆ Product-term clock ($A*B*C$)
- ◆ Sum-term clock ($A+B+C$)

Clock Line 1 Options

- ◆ Global clock (0, 1, 2, or 3) with positive edge clock enable
- ◆ Global clock (0, 1, 2, or 3) with negative edge clock enable

Select devices have been discontinued.
See Ordering Information section for product status.

OE Generator

There is one output enable (OE) generator per PAL block that generates two product-term driven output enables. Each I/O cell is simply an output buffer. Each I/O cell within the PAL block can choose to be permanently enabled, permanently disabled, or choose one of the two product term output enables per PAL block (Figure 6).

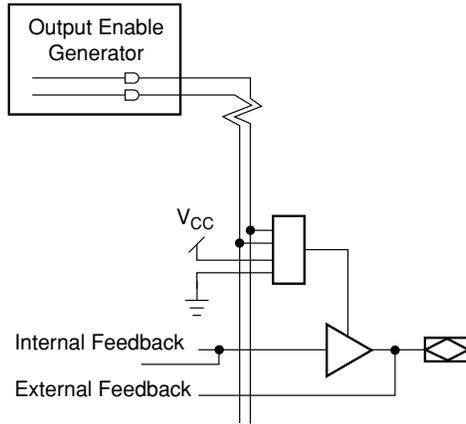

Figure 6. Output Enable Generator and I/O Cell

**Select devices have been discontinued.
See Ordering Information section for product status.**

SAFE FOR MIXED SUPPLY VOLTAGE SYSTEM DESIGNS ¹

Both the 3.3-V and 5-V V_{CC} MACH 5 devices are safe for mixed supply voltage system designs. The 5-V devices will not overdrive 3.3-V devices above the output voltage of 3.3 V, while they accept inputs from other 3.3-V devices. The 3.3-V devices will accept inputs up to 5.5 V. Both the 3.3-V and 5-V versions have the same high-speed performance and provide easy-to-use mixed-voltage design capability.

Note:

1. Excludes original M5-128, M5-192, and M5-256 while M5-128/1, M3-192/1 and M5-256/1 are supported. Please refer to Application Note titled "Hot Socketing and Mixed Supply Design with MACH 4 and MACH 5 Devices".

BUS-FRIENDLY INPUTS AND I/O

All MACH 5 devices have inputs and I/Os which feature the Bus-Friendly circuitry incorporating two inverters in series which loop back to the input. This double inversion weakly holds the input at its last driven logic state. While it is a good design practice to tie unused pins to a known state, the Bus-Friendly input structure pulls pins away from the input threshold voltage where noise can cause high-frequency switching. At power-up, the Bus-Friendly latches are reset to a logic level "1." For the circuit diagram, please refer to the document entitled *MACH Endurance Characteristics* on the Lattice Data Book CD-ROM or Lattice web site.

POWER MANAGEMENT

There are 4 power/speed options in each MACH 5 PAL block (Table 5). The speed and power tradeoff can be tailored for each design. The signal speed paths in the lower-power PAL blocks will be slower than those in the higher-power PAL blocks. This feature allows speed critical paths to run at maximum frequency while the rest of the signal paths operate in a lower-power mode. In large designs, there may be several different speed requirements for different portions of the design.

Table 5. Power Levels

High Speed/High Power	100% Power
Medium High Speed/Medium High Power	67% Power
Medium Low Speed/Medium Low Power	40% Power
Low Speed/Low Power	20% Power

PROGRAMMABLE SLEW RATE

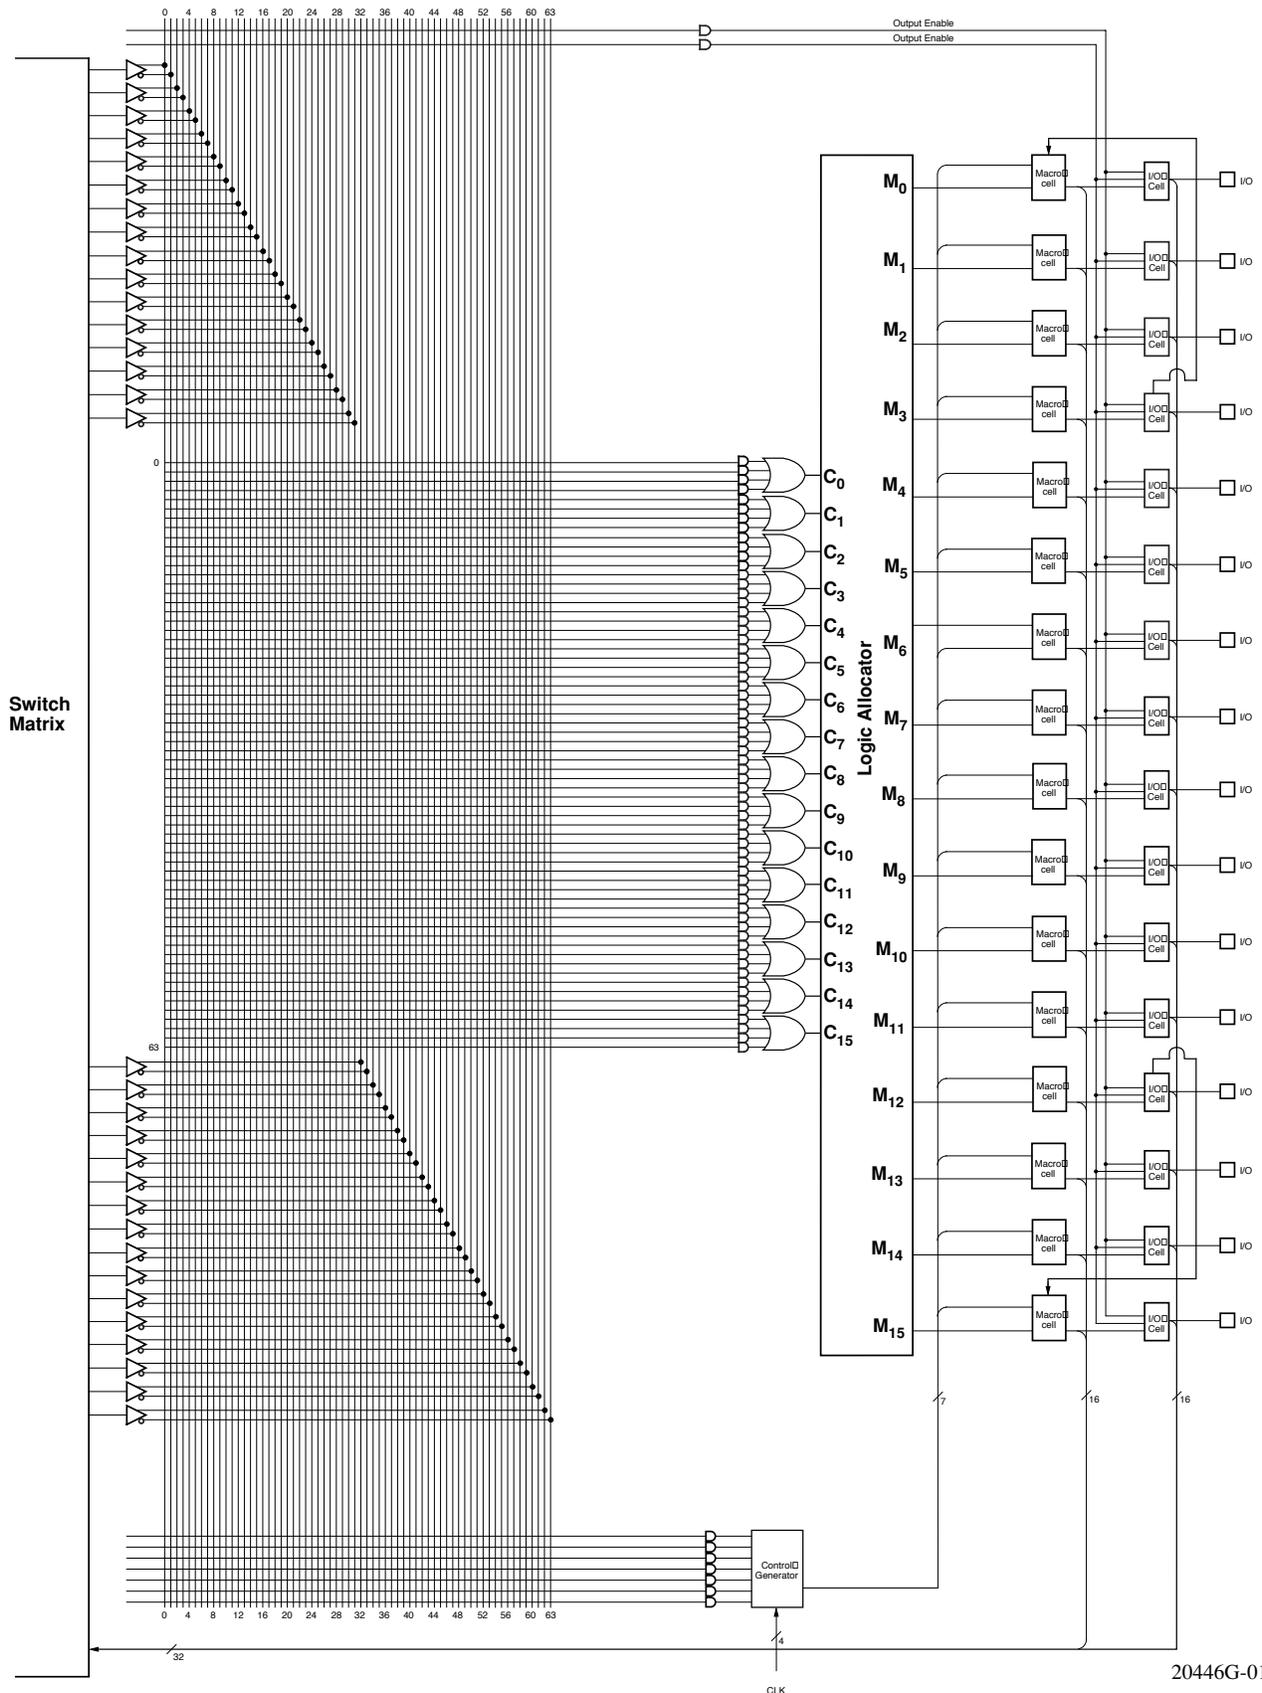

Each MACH 5 device I/O has an individually programmable output slew rate control bit. Each output can be individually configured for the higher speed transition (3 V/ns) or for the lower noise transition (1 V/ns). For high-speed designs with long, unterminated traces, the slow-slew rate will introduce fewer reflections, less noise, and keep ground bounce to a minimum. For designs with short traces or well terminated lines, the fast slew rate can be used to achieve the highest speed. The slew rate is adjusted independent of power.

POWER-UP RESET/SET

All flip-flops power up to a known state for predictable system initialization. If a macrocell is configured to SET on a signal from the control generator, then that macrocell will be SET during device power-up. If a macrocell is configured to RESET on a signal from the control generator or is not configured for set/reset, then that macrocell will RESET on power-up. To guarantee initialization values, the V_{CC} rise must be monotonic and the clock must be inactive until the reset delay time has elapsed.

ABSOLUTE MAXIMUM RATINGS

M5

Storage Temperature	-65°C to +150°C
Device Junction Temperature (Note 1)	+130°C or +150°C
Supply Voltage with Respect to Ground	-0.5 V to +7.0 V
DC Input Voltage	-0.5 V to 5.5 V
Static Discharge Voltage	2000 V
Latchup Current (-40°C to +85°C)	200 mA

Stresses above those listed under Absolute Maximum Ratings may cause permanent device failure. Functionality at or above these limits is not implied. Exposure to Absolute Maximum Ratings for extended periods may affect device reliability.

OPERATING RANGES

Commercial (C) Devices

Ambient Temperature (T_A)	Operating in Free Air	0°C to +70°C
Supply Voltage (V_{CC})	with Respect to Ground	+4.75 V to +5.25 V

Industrial (I) Devices

Ambient Temperature (T_A)	Operating in Free Air	-40°C to +85°C
Supply Voltage (V_{CC})	with Respect to Ground	+4.5 V to +5.5 V

Operating ranges define those limits between which the functionality of the device is guaranteed.

Select devices have been discontinued. See Ordering Information section for product status.

5-V DC CHARACTERISTICS OVER OPERATING RANGES

Parameter Symbol	Parameter Description	Test Description	Min	Typ	Max	Unit
V_{OH}	Output HIGH Voltage (For M5-128/1, M5-192/1, M5-256/1, M5-320, M5-384, M5-512 Devices)	$I_{OH} = -3.2 \text{ mA}, V_{CC} = \text{Min}, V_{IN} = V_{IH} \text{ or } V_{IL}$	2.4			V
		$I_{OH} = -100 \mu\text{A}, V_{CC} = \text{Max}, V_{IN} = V_{IH} \text{ or } V_{IL}$		3.3	3.6	V
	Output HIGH Voltage (For M5-128, M5-192, M5-256 Devices)	$I_{OH} = -3.2 \text{ mA}, V_{CC} = \text{Min}, V_{IN} = V_{IH} \text{ or } V_{IL}$	2.4			V
		$I_{OH} = -2.5 \text{ mA}, V_{CC} = 5.25 \text{ V}, V_{IN} = V_{IH} \text{ or } V_{IL}$			3.6	V
V_{OL}	Output LOW Voltage (Note 2)	$I_{OL} = +16 \text{ mA}, V_{CC} = \text{Min}, V_{IN} = V_{IH} \text{ or } V_{IL}$			0.5	V
V_{IH}	Input HIGH Voltage	Guaranteed Input Logical HIGH Voltage for all Inputs (Note 3)	2.0			V
V_{IL}	Input LOW Voltage	Guaranteed Input Logical LOW Voltage for all Inputs (Note 3)			0.8	V
I_{IH}	Input HIGH Leakage Current	$V_{IN} = 5.25, V_{CC} = \text{Max}$ (Note 4)			10	μA
I_{IL}	Input LOW Leakage Current	$V_{IN} = 0, V_{CC} = \text{Max}$ (Note 4)			-10	μA
I_{OZH}	Off-State Output Leakage Current HIGH	$V_{OUT} = 5.25, V_{CC} = \text{Max}, V_{IN} = V_{IH} \text{ or } V_{IL}$ (Note 4)			10	μA
I_{OZL}	Off-State Output Leakage Current LOW	$V_{OUT} = 0, V_{CC} = \text{Max}, V_{IN} = V_{IH} \text{ or } V_{IL}$ (Note 4)			-10	μA
I_{SC}	Output Short-Circuit Current	$V_{OUT} = 0.5 V_{CC} = \text{Max}, V_{IN} = V_{IH} \text{ or } V_{IL}$ (Note 5)	-30		-180	mA

Note:

- 150° for M5-128, M5-192 and M5-256 devices. 130° for M5-128/1, M5-192/1, M5-256/1, M5-320, M5-384 and M5-512 devices.
- Total I_{OL} between ground pins should not exceed 64 mA.
- These are absolute values with respect to device ground, and all overshoots due to system and/or tester noise are included.
- I/O pin leakage is the worst case of I_{IL} and I_{OZL} or I_{IH} and I_{OZH} .
- Not more than one output should be shorted at a time. Duration of the short-circuit should not exceed one second.

Notes:

1. See "MACH Switching Test Circuits" documentation on the Lattice Data Book CD-ROM or Lattice web site.
2. Numbers in parentheses are for M5-128, M5-192, M5-256.
3. If a signal is used as both a clock and a logic array input, then the maximum input frequency applies ($f_{MAX}/2$).

Select devices have been discontinued. See Ordering Information section for product status.

CAPACITANCE¹

Parameter Symbol	Parameter Description	Test conditions		Typ	Unit
C_{IN}	I/CLK pin	$V_{IN} = 2.0\text{ V}$	3.3 V or 5 V, 25° C, 1 MHz	12	pF
C_{VO}	I/O pin	$V_{OUT} = 2.0\text{ V}$	3.3 V or 5 V, 25° C, 1 MHz	10	pF

1. These parameters are not 100% tested, but are calculated at initial characterization and at any time the design is modified where these parameters may be affected.

I_{CC} vs. FREQUENCY

These curves represent the typical power consumption for a particular device at system frequency. The selected “typical” pattern is a 16-bit up-down counter. This pattern fills the device and exercises every macrocell. Maximum frequency shown uses internal feedback and a D-type register. Power/Speed are optimized to obtain the highest counter frequency and the lowest power. The highest frequency (LSBs) is placed in common PAL blocks, which are set to high power. The lowest frequency signals (MSBs) are placed in a common PAL block and set to lowest power. For a more detailed discussion about MACH 5 power consumption, refer to the application note entitled *MACH 5 Power* in the Application Notes section on the Lattice Data Book CD-ROM or Lattice web site.

Pin Designations

- CLK = Clock
- GND = Ground
- I = Input
- I/O = Input/Output
- NC = No Connect
- V_{CC} = Supply Voltage
- TDI = Test Data In
- TCK = Test Clock
- TMS = Test Mode Select
- TDO = Test Data Out

3.3V M5LV ORDERING INFORMATION¹

Lattice standard products are available in several packages and operating ranges. The order number (Valid Combination) is formed by a combination of the elements below.

Note:

1. See below for valid device/package combinations.

Valid Combinations		
M5LV-128/68	Commercial: -5, -7, -10, -12	VC, VI
M5LV-128/74		VC, VI
M5LV-128/104		VC, VI
M5LV-128/120		YC, YI
M5LV-256/68		YC, YI
M5LV-256/74		VC, VI
M5LV-256/104		VC, VI
M5LV-256/120		YC, YI
M5LV-256/160		YC, YI
		Industrial: -7, -10, -12, -15

Device Marking

Actual device marking differs from the ordering part number (OPN). All MACH devices are dual-marked with both Commercial and Industrial grades. The Industrial grade is slower, i.e., M5LV-512/256-7AC-10AI.

Valid Combinations			
M5LV-320/120	Commercial: -6, -7, -10, -12, -15	YC, YI	
M5LV-320/160		YC, YI	
M5LV-384/120		YC, YI	
M5LV-384/160		YC, YI	
M5LV-512/120		YC, YI	
M5LV-512/160		YC, YI	
M5LV-512/256		SAC, SAI	
		Industrial: -10, -12, -15, -20	YC, YI
			YC, YI
			YC, YI

Valid Combinations

Valid Combinations list configurations planned to be supported in volume for this device. Consult the local Lattice sales office to confirm availability of specific valid combinations and to check on newly released combinations.

Select devices have been discontinued. See Ordering Information section for product status.
