
Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Discontinued at Digi-Key
Core Processor	ARM® Cortex®-M4F
Core Size	32-Bit Single-Core
Speed	48MHz
Connectivity	EBI/EMI, I²C, IrDA, SmartCard, SPI, UART/USART, USB
Peripherals	Brown-out Detect/Reset, DMA, I²S, POR, PWM, WDT
Number of I/O	93
Program Memory Size	256KB (256K x 8)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	32K x 8
Voltage - Supply (Vcc/Vdd)	1.98V ~ 3.8V
Data Converters	A/D 8x12b; D/A 2x12b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	120-VFBGA
Supplier Device Package	120-BGA (7x7)
Purchase URL	https://www.e-xfl.com/product-detail/silicon-labs/efm32wg995f256-bga120

2.1.3 Memory System Controller (MSC)

The Memory System Controller (MSC) is the program memory unit of the EFM32WG microcontroller. The flash memory is readable and writable from both the Cortex-M4 and DMA. The flash memory is divided into two blocks; the main block and the information block. Program code is normally written to the main block. Additionally, the information block is available for special user data and flash lock bits. There is also a read-only page in the information block containing system and device calibration data. Read and write operations are supported in the energy modes EM0 and EM1.

2.1.4 Direct Memory Access Controller (DMA)

The Direct Memory Access (DMA) controller performs memory operations independently of the CPU. This has the benefit of reducing the energy consumption and the workload of the CPU, and enables the system to stay in low energy modes when moving for instance data from the USART to RAM or from the External Bus Interface to a PWM-generating timer. The DMA controller uses the PL230 µDMA controller licensed from ARM.

2.1.5 Reset Management Unit (RMU)

The RMU is responsible for handling the reset functionality of the EFM32WG.

2.1.6 Energy Management Unit (EMU)

The Energy Management Unit (EMU) manage all the low energy modes (EM) in EFM32WG microcontrollers. Each energy mode manages if the CPU and the various peripherals are available. The EMU can also be used to turn off the power to unused SRAM blocks.

2.1.7 Clock Management Unit (CMU)

The Clock Management Unit (CMU) is responsible for controlling the oscillators and clocks on-board the EFM32WG. The CMU provides the capability to turn on and off the clock on an individual basis to all peripheral modules in addition to enable/disable and configure the available oscillators. The high degree of flexibility enables software to minimize energy consumption in any specific application by not wasting power on peripherals and oscillators that are inactive.

2.1.8 Watchdog (WDOG)

The purpose of the watchdog timer is to generate a reset in case of a system failure, to increase application reliability. The failure may e.g. be caused by an external event, such as an ESD pulse, or by a software failure.

2.1.9 Peripheral Reflex System (PRS)

The Peripheral Reflex System (PRS) system is a network which lets the different peripheral module communicate directly with each other without involving the CPU. Peripheral modules which send out Reflex signals are called producers. The PRS routes these reflex signals to consumer peripherals which apply actions depending on the data received. The format for the Reflex signals is not given, but edge triggers and other functionality can be applied by the PRS.

2.1.10 External Bus Interface (EBI)

The External Bus Interface provides access to external parallel interface devices such as SRAM, FLASH, ADCs and LCDs. The interface is memory mapped into the address bus of the Cortex-M4. This enables seamless access from software without manually manipulating the IO settings each time a read or write is performed. The data and address lines are multiplexed in order to reduce the number of pins required to interface the external devices. The timing is adjustable to meet specifications of the external devices. The interface is limited to asynchronous devices.

2.1.18 Timer/Counter (TIMER)

The 16-bit general purpose Timer has 3 compare/capture channels for input capture and compare/Pulse-Width Modulation (PWM) output. TIMER0 also includes a Dead-Time Insertion module suitable for motor control applications.

2.1.19 Real Time Counter (RTC)

The Real Time Counter (RTC) contains a 24-bit counter and is clocked either by a 32.768 kHz crystal oscillator, or a 32.768 kHz RC oscillator. In addition to energy modes EM0 and EM1, the RTC is also available in EM2. This makes it ideal for keeping track of time since the RTC is enabled in EM2 where most of the device is powered down.

2.1.20 Backup Real Time Counter (BURTC)

The Backup Real Time Counter (BURTC) contains a 32-bit counter and is clocked either by a 32.768 kHz crystal oscillator, a 32.768 kHz RC oscillator or a 1 kHz ULFRCO. The BURTC is available in all Energy Modes and it can also run in backup mode, making it operational even if the main power should drain out.

2.1.21 Low Energy Timer (LETIMER)

The unique LETIMER^{TM}, the Low Energy Timer, is a 16-bit timer that is available in energy mode EM2 in addition to EM1 and EM0. Because of this, it can be used for timing and output generation when most of the device is powered down, allowing simple tasks to be performed while the power consumption of the system is kept at an absolute minimum. The LETIMER can be used to output a variety of waveforms with minimal software intervention. It is also connected to the Real Time Counter (RTC), and can be configured to start counting on compare matches from the RTC.

2.1.22 Pulse Counter (PCNT)

The Pulse Counter (PCNT) can be used for counting pulses on a single input or to decode quadrature encoded inputs. It runs off either the internal LFACLK or the PCNTn_S0IN pin as external clock source. The module may operate in energy mode EM0 – EM3.

2.1.23 Analog Comparator (ACMP)

The Analog Comparator is used to compare the voltage of two analog inputs, with a digital output indicating which input voltage is higher. Inputs can either be one of the selectable internal references or from external pins. Response time and thereby also the current consumption can be configured by altering the current supply to the comparator.

2.1.24 Voltage Comparator (VCMP)

The Voltage Supply Comparator is used to monitor the supply voltage from software. An interrupt can be generated when the supply falls below or rises above a programmable threshold. Response time and thereby also the current consumption can be configured by altering the current supply to the comparator.

2.1.25 Analog to Digital Converter (ADC)

The ADC is a Successive Approximation Register (SAR) architecture, with a resolution of up to 12 bits at up to one million samples per second. The integrated input mux can select inputs from 8 external pins and 6 internal signals.

2.1.26 Digital to Analog Converter (DAC)

The Digital to Analog Converter (DAC) can convert a digital value to an analog output voltage. The DAC is fully differential rail-to-rail, with 12-bit resolution. It has two single ended output buffers which can be combined into one differential output. The DAC may be used for a number of different applications such as sensor interfaces or sound output.

2.1.27 Operational Amplifier (OPAMP)

The EFM32WG995 features 3 Operational Amplifiers. The Operational Amplifier is a versatile general purpose amplifier with rail-to-rail differential input and rail-to-rail single ended output. The input can be set to pin, DAC or OPAMP, whereas the output can be pin, OPAMP or ADC. The current is programmable and the OPAMP has various internal configurations such as unity gain, programmable gain using internal resistors etc.

2.1.28 Low Energy Sensor Interface (LESENSE)

The Low Energy Sensor Interface (LESENSE^{TM}), is a highly configurable sensor interface with support for up to 16 individually configurable sensors. By controlling the analog comparators and DAC, LESENSE is capable of supporting a wide range of sensors and measurement schemes, and can for instance measure LC sensors, resistive sensors and capacitive sensors. LESENSE also includes a programmable FSM which enables simple processing of measurement results without CPU intervention. LESENSE is available in energy mode EM2, in addition to EM0 and EM1, making it ideal for sensor monitoring in applications with a strict energy budget.

2.1.29 Backup Power Domain

The backup power domain is a separate power domain containing a Backup Real Time Counter, BURTC, and a set of retention registers, available in all energy modes. This power domain can be configured to automatically change power source to a backup battery when the main power drains out. The backup power domain enables the EFM32WG995 to keep track of time and retain data, even if the main power source should drain out.

2.1.30 Advanced Encryption Standard Accelerator (AES)

The AES accelerator performs AES encryption and decryption with 128-bit or 256-bit keys. Encrypting or decrypting one 128-bit data block takes 52 HFCORECLK cycles with 128-bit keys and 75 HFCORECLK cycles with 256-bit keys. The AES module is an AHB slave which enables efficient access to the data and key registers. All write accesses to the AES module must be 32-bit operations, i.e. 8- or 16-bit operations are not supported.

2.1.31 General Purpose Input/Output (GPIO)

In the EFM32WG995, there are 93 General Purpose Input/Output (GPIO) pins, which are divided into ports with up to 16 pins each. These pins can individually be configured as either an output or input. More advanced configurations like open-drain, filtering and drive strength can also be configured individually for the pins. The GPIO pins can also be overridden by peripheral pin connections, like Timer PWM outputs or USART communication, which can be routed to several locations on the device. The GPIO supports up to 16 asynchronous external pin interrupts, which enables interrupts from any pin on the device. Also, the input value of a pin can be routed through the Peripheral Reflex System to other peripherals.

2.1.32 Liquid Crystal Display Driver (LCD)

The LCD driver is capable of driving a segmented LCD display with up to 8x36 segments. A voltage boost function enables it to provide the LCD display with higher voltage than the supply voltage for the device. In addition, an animation feature can run custom animations on the LCD display without any CPU intervention. The LCD driver can also remain active even in Energy Mode 2 and provides a Frame Counter interrupt that can wake-up the device on a regular basis for updating data.

2.2 Configuration Summary

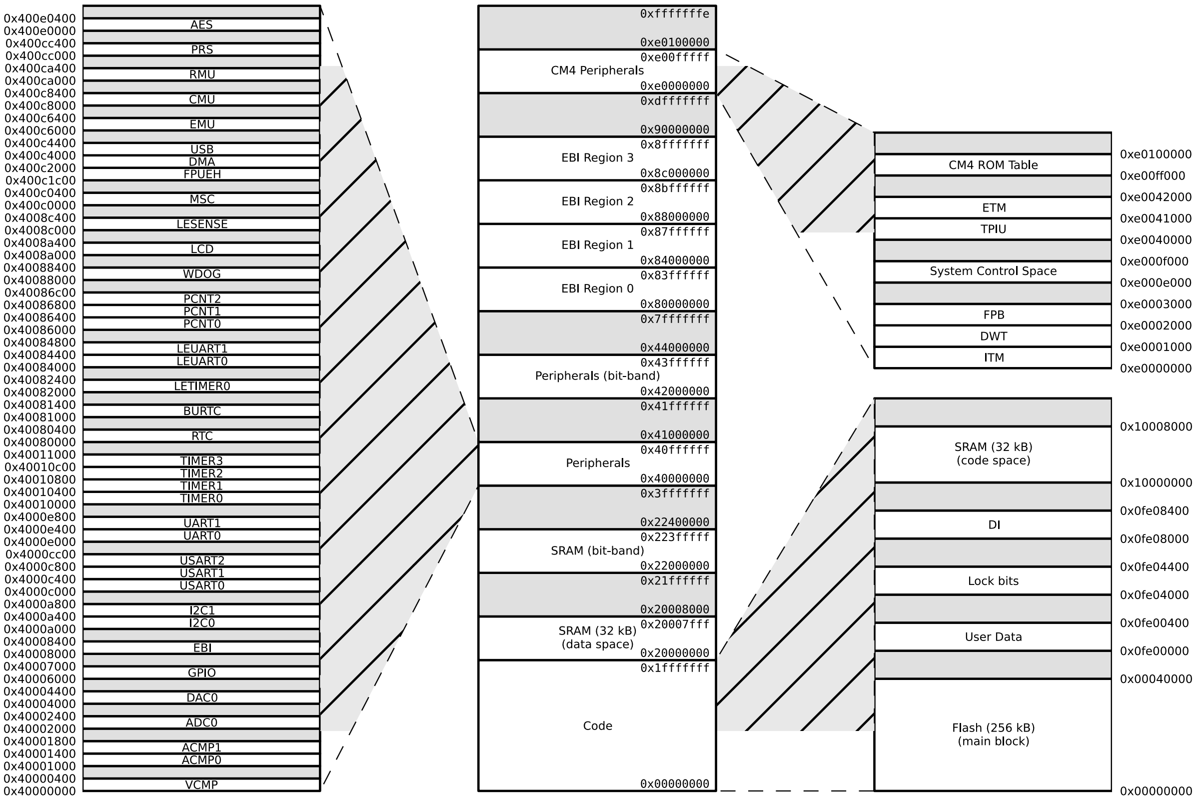
The features of the EFM32WG995 is a subset of the feature set described in the EFM32WG Reference Manual. Table 2.1 (p. 8) describes device specific implementation of the features.

Module	Configuration	Pin Connections
VCMP	Full configuration	NA
ADC0	Full configuration	ADC0_CH[7:0]
DAC0	Full configuration	DAC0_OUT[1:0], DAC0_OUTxALT
OPAMP	Full configuration	Outputs: OPAMP_OUTx, OPAMP_OUTxALT, Inputs: OPAMP_Px, OPAMP_Nx
AES	Full configuration	NA
GPIO	93 pins	Available pins are shown in Table 4.3 (p. 70)
LCD	Full configuration	LCD_SEG[35:0], LCD_COM[7:0], LCD_BCAP_P, LCD_BCAP_N, LCD_BEXT

2.3 Memory Map

The *EFM32WG995* memory map is shown in Figure 2.2 (p. 9), with RAM and Flash sizes for the largest memory configuration.

Figure 2.2. EFM32WG995 Memory Map with largest RAM and Flash sizes



Symbol	Parameter	Condition	Min	Typ	Max	Unit
		EM2 current with RTC prescaled to 1 Hz, 32.768 kHz LFRCO, V_{DD}= 3.0 V, T_{AMB}=85°C		3.0[1]	4.0[1]	µA
I_{EM3}	EM3 current	V_{DD}= 3.0 V, T_{AMB}=25°C		0.65	1.3	µA
		V_{DD}= 3.0 V, T_{AMB}=85°C		2.65	4.0	µA
I_{EM4}	EM4 current	V_{DD}= 3.0 V, T_{AMB}=25°C		0.02	0.055	µA
		V_{DD}= 3.0 V, T_{AMB}=85°C		0.44	0.9	µA

Figure 3.32. OPAMP Common Mode Rejection Ratio

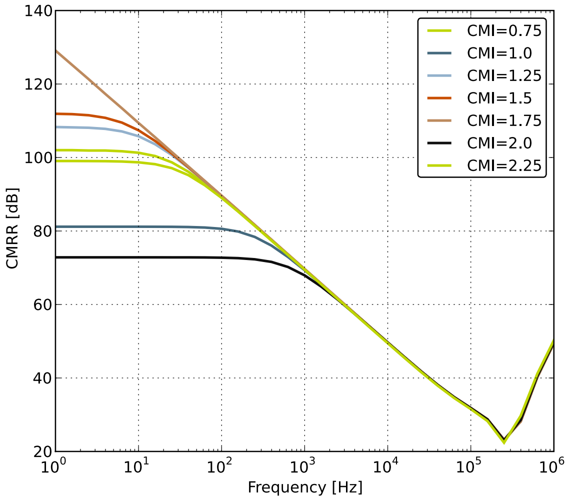

Figure 3.33. OPAMP Positive Power Supply Rejection Ratio

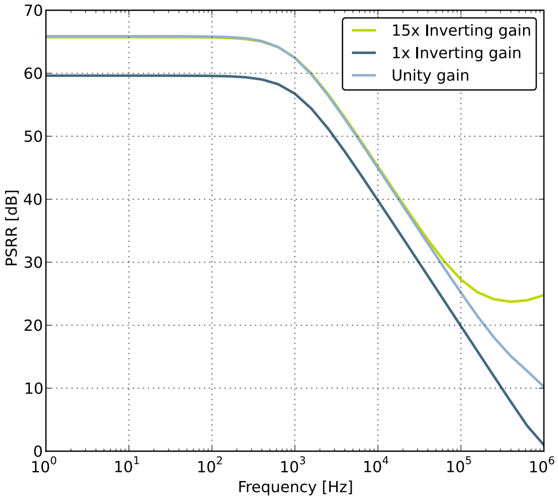

Table 3.20. EBI Write Enable Timing

Symbol	Parameter	Min	Typ	Max	Unit
t_{OH_WEn} [1,2,3,4]	Output hold time, from trailing EBI_WEn/ EBI_NANDWEn edge to EBI_AD, EBI_A, EBI_CSn, EBI_BLn invalid	-6.00 + (WRHOLD * $t_{HFCORECLK}$)			ns
t_{OSU_WEn} [1,2,3,4,5]	Output setup time, from EBI_AD, EBI_A, EBI_CSn, EBI_BLn valid to leading EBI_WEn/ EBI_NANDWEn edge	-14.00 + (WRSETUP * $t_{HFCORECLK}$)			ns
t_{WIDTH_WEn} [1,2,3,4,5]	EBI_WEn/EBI_NANDWEn pulse width	-7.00 + ((WRSTRB +1) * $t_{HFCORECLK}$)			ns

[1] Applies for all addressing modes (figure only shows D16 addressing mode)

[2] Applies for both EBI_WEn and EBI_NANWEn (figure only shows EBI_WEn)

[3] Applies for all polarities (figure only shows active low signals)

[4] Measurement done at 10% and 90% of V_{DD} (figure shows 50% of $_{VDD}$)

[5] The figure shows the timing for the case that the half strobe length functionality is not used, i.e. HALFWE=0. The leading edge of EBI_WEn can be moved to the right by setting HALFWE=1. This decreases the length of t_{WIDTH_WEn} and increases the length of t_{OSU_WEn} by 1/2 * $t_{HFCLKNODIV}$.

Figure 3.39. EBI Address Latch Enable Related Output Timing

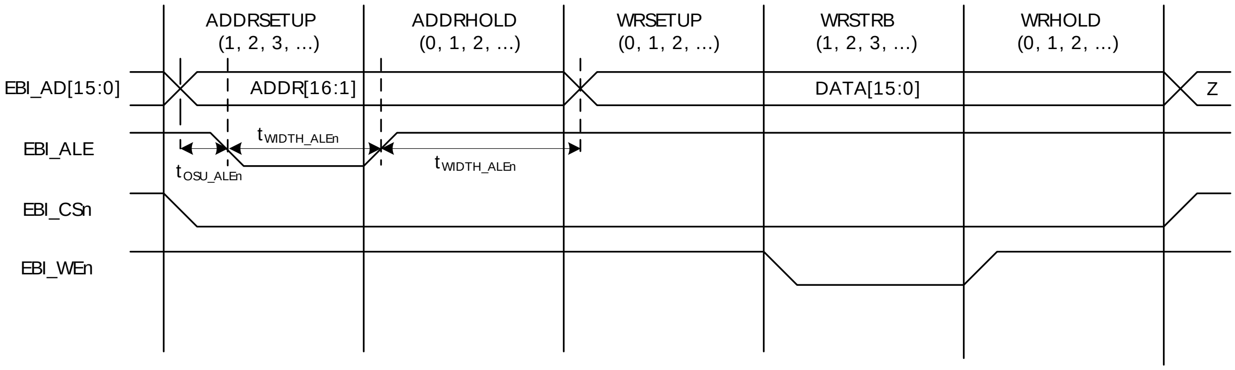

Table 3.21. EBI Address Latch Enable Related Output Timing

Symbol	Parameter	Min	Typ	Max	Unit
t_{OH_ALEn} [1,2,3,4]	Output hold time, from trailing EBI_ALE edge to EBI_AD invalid	-6.00 + (ADDRHOLD[5] * $t_{HFCORECLK}$)			ns
t_{OSU_ALEn} [1,2,4]	Output setup time, from EBI_AD valid to leading EBI_ALE edge	-13.00 + (0 * $t_{HFCORECLK}$)			ns
t_{WIDTH_ALEn} [1,2,3,4]	EBI_ALEn pulse width	-7.00 + (ADDRSETUP+1) * $t_{HFCORECLK}$)			ns

[1] Applies to addressing modes D8A24ALE and D16A16ALE (figure only shows D16A16ALE)

[2] Applies for all polarities (figure only shows active low signals)

[3] The figure shows the timing for the case that the half strobe length functionality is not used, i.e. HALFALE=0. The trailing edge of EBI_ALE can be moved to the left by setting HALFALE=1. This decreases the length of t_{WIDTH_ALEn} and increases the length of tOH_ALEn by $t_{HFCORECLK}$ - 1/2 * $t_{HFCLKNODIV}$.

[4] Measurement done at 10% and 90% of V_{DD} (figure shows 50% of $_{VDD}$)

[5] Figure only shows a write operation. For a multiplexed read operation the address hold time is controlled via the RDSETUP state instead of via the ADDRHOLD state.

Symbol	Parameter	Min	Typ	Max	Unit
t_{SCLK_hi} [1][2]	SCLK high period	3 * $t_{HFPERCLK}$			ns
t_{SCLK_lo} [1][2]	SCLK low period	3 * $t_{HFPERCLK}$			ns
$t_{CS\_ACT\_MI}$ [1][2]	CS active to MISO	5.00		35.00	ns
$t_{CS\_DIS\_MI}$ [1][2]	CS disable to MISO	5.00		35.00	ns
t_{SU_MO} [1][2]	MOSI setup time	5.00			ns
t_{H_MO} [1][2]	MOSI hold time	2 + 2 * $t_{HFPERCLK}$			ns
t_{SCLK_MI} [1][2]	SCLK to MISO	-264 + $t_{HFPERCLK}$		-234 + 2 * $t_{HFPERCLK}$	ns

[1] Applies for both CLKPHA = 0 and CLKPHA = 1 (figure only shows CLKPHA = 0)

[2] Measurement done at 10% and 90% of V_{DD} (figure shows 50% of $_{VDD}$)

3.19 Digital Peripherals

Table 3.33. Digital Peripherals

Symbol	Parameter	Condition	Min	Typ	Max	Unit
I_{USART}	USART current	USART idle current, clock enabled		4.0		µA/MHz
I_{UART}	UART current	UART idle current, clock enabled		3.8		µA/MHz
I_{LEUART}	LEUART current	LEUART idle current, clock enabled		194.0		nA
I_{I2C}	I2C current	I2C idle current, clock enabled		7.6		µA/MHz
I_{TIMER}	TIMER current	TIMER_0 idle current, clock enabled		6.5		µA/MHz
$I_{LETIMER}$	LETIMER current	LETIMER idle current, clock enabled		85.8		nA
I_{PCNT}	PCNT current	PCNT idle current, clock enabled		91.4		nA
I_{RTC}	RTC current	RTC idle current, clock enabled		54.6		nA
I_{LCD}	LCD current	LCD idle current, clock enabled		72.7		nA
I_{AES}	AES current	AES idle current, clock enabled		1.8		µA/MHz
I_{GPIO}	GPIO current	GPIO idle current, clock enabled		3.4		µA/MHz
I_{EBI}	EBI current	EBI idle current, clock enabled		6.5		µA/MHz
I_{PRS}	PRS current	PRS idle current		3.9		µA/MHz
I_{DMA}	DMA current	Clock enable		10.9		µA/MHz

4 Pinout and Package

Note

Please refer to the application note "AN0002 EFM32 Hardware Design Considerations" for guidelines on designing Printed Circuit Boards (PCB's) for the EFM32WG995.

4.1 Pinout

The *EFM32WG995* pinout is shown in Figure 4.1 (p. 58) and Table 4.1 (p. 58). Alternate locations are denoted by "#" followed by the location number (Multiple locations on the same pin are split with "/"). Alternate locations can be configured in the LOCATION bitfield in the *_ROUTE register in the module in question.

Figure 4.1. EFM32WG995 Pinout (top view, not to scale)

DAC0_OUT0ALT / OPAMP_OUT0ALT	PC0	PC1	PC2	PC3	PD0			Digital to Analog Converter DAC0_OUT0ALT / OPAMP alternative output for channel 0.
DAC0_OUT1 / OPAMP_OUT1	PB12							Digital to Analog Converter DAC0_OUT1 / OPAMP output channel number 1.
DAC0_OUT1ALT / OPAMP_OUT1ALT	PC12	PC13	PC14	PC15	PD1			Digital to Analog Converter DAC0_OUT1ALT / OPAMP alternative output for channel 1.
OPAMP_OUT2	PD5	PD0						Operational Amplifier 2 output.
DAC0_P0 / OPAMP_P0	PC4							Operational Amplifier 0 external positive input.
DAC0_P1 / OPAMP_P1	PD6							Operational Amplifier 1 external positive input.
OPAMP_P2	PD4							Operational Amplifier 2 external positive input.
DBG_SWCLK	PF0	PF0	PF0	PF0				Debug-interface Serial Wire clock input. Note that this function is enabled to pin out of reset, and has a built-in pull down.
DBG_SWDIO	PF1	PF1	PF1	PF1				Debug-interface Serial Wire data input / output. Note that this function is enabled to pin out of reset, and has a built-in pull up.
DBG_SWO	PF2	PC15	PD1	PD2				Debug-interface Serial Wire viewer Output. Note that this function is not enabled after reset, and must be enabled by software to be used.
EBI_A00	PA12	PA12	PA12					External Bus Interface (EBI) address output pin 00.
EBI_A01	PA13	PA13	PA13					External Bus Interface (EBI) address output pin 01.
EBI_A02	PA14	PA14	PA14					External Bus Interface (EBI) address output pin 02.
EBI_A03	PB9	PB9	PB9					External Bus Interface (EBI) address output pin 03.
EBI_A04	PB10	PB10	PB10					External Bus Interface (EBI) address output pin 04.
EBI_A05	PC6	PC6	PC6					External Bus Interface (EBI) address output pin 05.
EBI_A06	PC7	PC7	PC7					External Bus Interface (EBI) address output pin 06.
EBI_A07	PE0	PE0	PE0					External Bus Interface (EBI) address output pin 07.
EBI_A08	PE1	PE1	PE1					External Bus Interface (EBI) address output pin 08.
EBI_A09	PE2	PC9	PC9					External Bus Interface (EBI) address output pin 09.
EBI_A10	PE3	PC10	PC10					External Bus Interface (EBI) address output pin 10.
EBI_A11	PE4	PE4	PE4					External Bus Interface (EBI) address output pin 11.
EBI_A12	PE5	PE5	PE5					External Bus Interface (EBI) address output pin 12.
EBI_A13	PE6	PE6	PE6					External Bus Interface (EBI) address output pin 13.
EBI_A14	PE7	PE7	PE7					External Bus Interface (EBI) address output pin 14.
EBI_A15	PC8	PC8	PC8					External Bus Interface (EBI) address output pin 15.
EBI_A16	PB0	PB0	PB0					External Bus Interface (EBI) address output pin 16.
EBI_A17	PB1	PB1	PB1					External Bus Interface (EBI) address output pin 17.
EBI_A18	PB2	PB2	PB2					External Bus Interface (EBI) address output pin 18.
EBI_A19	PB3	PB3	PB3					External Bus Interface (EBI) address output pin 19.
EBI_A20	PB4	PB4	PB4					External Bus Interface (EBI) address output pin 20.
EBI_A21	PB5	PB5	PB5					External Bus Interface (EBI) address output pin 21.

1. The dimensions in parenthesis are reference.
2. Datum "C" and seating plane are defined by the crown of the soldier balls.
3. All dimensions are in millimeters.

The BGA120 Package uses SAC105 solderballs.

All EFM32 packages are RoHS compliant and free of Bromine (Br) and Antimony (Sb).

For additional Quality and Environmental information, please see:
http://www.silabs.com/support/quality/pages/default.aspx.

Corrected the ADC resolution from 12, 10 and 6 bit to 12, 8 and 6 bit.

Updated the EM0 and EM1 current consumption numbers. Updated the the EM1 plots and removed the EM0 plots.

Updated Environmental information.

Updated trademark, disclaimer and contact information.

Other minor corrections.

7.4 Revision 1.20

June 28th, 2013

Corrected pinout top view figure.

Updated PCB Land Pattern, PCB Solder Mask and PCB Stencil Design figures.

Updated power requirements in the Power Management section.

Removed minimum load capacitance figure and table. Added reference to application note.

Other minor corrections.

7.5 Revision 1.10

May 6th, 2013

Updated current consumption table and figures in Electrical characteristics section.

Other minor corrections.

7.6 Revision 1.00

September 11th, 2012

Updated the HFRCO 1 MHz band typical value to 1.2 MHz.

Updated the HFRCO 7 MHz band typical value to 6.6 MHz.

Corrected BGA solder balls material from Sn96.5/Ag3/Cu0.5 to SAC105.

Other minor corrections.

7.7 Revision 0.95

May 3rd, 2012

Updated EM2/EM3 current consumption at 85°C.

7.8 Revision 0.90

February 27th, 2012

Initial preliminary release.

A Disclaimer and Trademarks

A.1 Disclaimer

Silicon Laboratories intends to provide customers with the latest, accurate, and in-depth documentation of all peripherals and modules available for system and software implementers using or intending to use the Silicon Laboratories products. Characterization data, available modules and peripherals, memory sizes and memory addresses refer to each specific device, and "Typical" parameters provided can and do vary in different applications. Application examples described herein are for illustrative purposes only. Silicon Laboratories reserves the right to make changes without further notice and limitation to product information, specifications, and descriptions herein, and does not give warranties as to the accuracy or completeness of the included information. Silicon Laboratories shall have no liability for the consequences of use of the information supplied herein. This document does not imply or express copyright licenses granted hereunder to design or fabricate any integrated circuits. The products must not be used within any Life Support System without the specific written consent of Silicon Laboratories. A "Life Support System" is any product or system intended to support or sustain life and/or health, which, if it fails, can be reasonably expected to result in significant personal injury or death. Silicon Laboratories products are generally not intended for military applications. Silicon Laboratories products shall under no circumstances be used in weapons of mass destruction including (but not limited to) nuclear, biological or chemical weapons, or missiles capable of delivering such weapons.

A.2 Trademark Information

Silicon Laboratories Inc., Silicon Laboratories, Silicon Labs, SiLabs and the Silicon Labs logo, CMEMS®, EFM, EFM32, EFR, Energy Micro, Energy Micro logo and combinations thereof, "the world’s most energy friendly microcontrollers", Ember®, EZLink®, EZMac®, EZRadio®, EZRadioPRO®, DSPLL®, ISOmodem®, Precision32®, ProSLIC®, SiPHY®, USBXpress® and others are trademarks or registered trademarks of Silicon Laboratories Inc.
