Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Active
Core Processor	ARM® Cortex®-M0
Core Size	32-Bit Single-Core
Speed	50MHz
Connectivity	I²C, Microwire, SmartCard, SPI, SSP, UART/USART, USB
Peripherals	Brown-out Detect/Reset, DMA, POR, PWM, WDT
Number of I/O	54
Program Memory Size	128KB (128K x 8)
Program Memory Type	FLASH
EEPROM Size	4K x 8
RAM Size	10K x 8
Voltage - Supply (Vcc/Vdd)	1.8V ~ 3.6V
Data Converters	A/D 8x10b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	64-LQFP
Supplier Device Package	64-LQFP (10x10)
Purchase URL	https://www.e-xfl.com/product-detail/nxp-semiconductors/lpc11u37hfbd64-4ql

Table 3. Pin description

Symbol	Pin HVQFN33	Pin TFBGA48	Pin LQFP48	Pin LQFP64	Reset state [1]	Type	Description
SWCLK/PIO0_10/SCK0/ CT16B0_MAT2	19	E7	29	38 [3]	I; PU	I	**SWCLK —** Serial wire clock and test clock TCK for JTAG interface.
					-	I/O	**PIO0_10 —** General purpose digital input/output pin.
					-	O	**SCK0 —** Serial clock for SSP0.
					-	O	**CT16B0_MAT2 —** Match output 2 for 16-bit timer 0.
TDI/PIO0_11/AD0/ CT32B0_MAT3	21	D8	32	42 [6]	I; PU	I	**TDI —** Test Data In for JTAG interface.
					-	I/O	**PIO0_11 —** General purpose digital input/output pin.
					-	I	**AD0 —** A/D converter, input 0.
					-	O	**CT32B0_MAT3 —** Match output 3 for 32-bit timer 0.
TMS/PIO0_12/AD1/ CT32B1_CAP0	22	C7	33	44 [6]	I; PU	I	**TMS —** Test Mode Select for JTAG interface.
					-	I/O	**PIO_12 —** General purpose digital input/output pin.
					-	I	**AD1 —** A/D converter, input 1.
					-	I	**CT32B1_CAP0 —** Capture input 0 for 32-bit timer 1.
TDO/PIO0_13/AD2/ CT32B1_MAT0	23	C8	34	45 [6]	I; PU	O	**TDO —** Test Data Out for JTAG interface.
					-	I/O	**PIO0_13 —** General purpose digital input/output pin.
					-	I	**AD2 —** A/D converter, input 2.
					-	O	**CT32B1_MAT0 —** Match output 0 for 32-bit timer 1.
$\overline{\text{TRST}}$/PIO0_14/AD3/ CT32B1_MAT1	24	B7	35	46 [6]	I; PU	I	**$\overline{\text{TRST}}$ —** Test Reset for JTAG interface.
					-	I/O	**PIO0_14 —** General purpose digital input/output pin.
					-	I	**AD3 —** A/D converter, input 3.
					-	O	**CT32B1_MAT1 —** Match output 1 for 32-bit timer 1.
SWDIO/PIO0_15/AD4/ CT32B1_MAT2	25	B6	39	52 [6]	I; PU	I/O	**SWDIO —** Serial wire debug input/output.
					-	I/O	**PIO0_15 —** General purpose digital input/output pin.
					-	I	**AD4 —** A/D converter, input 4.
					-	O	**CT32B1_MAT2 —** Match output 2 for 32-bit timer 1.
PIO0_16/AD5/ CT32B1_MAT3/IOH_8/ WAKEUP	26	A6	40	53 [6]	I; PU	I/O	**PIO0_16 —** General purpose digital input/output pin.
					-	I	**AD5 —** A/D converter, input 5.
					-	O	**CT32B1_MAT3 —** Match output 3 for 32-bit timer 1.
					-	I/O	**IOH_8 —** I/O Handler input/output 8. (LPC11U37HFBD64/401 only.)
					-	I	**WAKEUP —** Deep power-down mode wake-up pin with 20 ns glitch filter. Pull this pin HIGH externally before entering Deep power-down mode, then pull LOW to exit Deep power-down mode. A LOW-going pulse as short as 50 ns wakes up the part.

Table 3. Pin description

PIO1_3/CT32B1_MAT3/ IOH_13	-	-	-	50 [3]	I; PU	I/O	**PIO1_3 —** General purpose digital input/output pin.
					-	O	**CT32B1_MAT3 —** Match output 3 for 32-bit timer 1.
					-	I/O	**IOH_13 —** I/O Handler input/output 13. (LPC11U37HFBD64/401 only.)
PIO1_4/CT32B1_CAP0/ IOH_14	-	-	-	16 [3]	I; PU	I/O	**PIO1_4 —** General purpose digital input/output pin.
					-	I	**CT32B1_CAP0 —** Capture input 0 for 32-bit timer 1.
					-	I/O	**IOH_14 —** I/O Handler input/output 14. (LPC11U37HFBD64/401 only.)
PIO1_5/CT32B1_CAP1 /IOH_15	-	H8	-	32 [3]	I; PU	I/O	**PIO1_5 —** General purpose digital input/output pin.
					-	I	**CT32B1_CAP1 —** Capture input 1 for 32-bit timer 1.
					-	I/O	**IOH_15 —** I/O Handler input/output 15. (LPC11U37HFBD64/401 only.)
PIO1_6/IOH_16	-	-	-	64 [3]	I; PU	I/O	**PIO1_6 —** General purpose digital input/output pin.
					-	I/O	**IOH_16 —** I/O Handler input/output 16. (LPC11U37HFBD64/401 only.)
PIO1_7/IOH_17	-	-	-	6 [3]	I; PU	I/O	**PIO1_7 —** General purpose digital input/output pin.
					-	I/O	**IOH_17 —** I/O Handler input/output 17. (LPC11U37HFBD64/401 only.)
PIO1_8/IOH_18	-	-	-	39 [3]	I; PU	I/O	**PIO1_8 —** General purpose digital input/output pin.
					-	I/O	**IOH_18 —** I/O Handler input/output 18. (LPC11U37HFBD64/401 only.)
PIO1_9	-	-	-	55 [3]	I; PU	I/O	**PIO1_9 —** General purpose digital input/output pin.
PIO1_10	-	-	-	12 [3]	I; PU	I/O	**PIO1_10 —** General purpose digital input/output pin.
PIO1_11	-	-	-	43 [3]	I; PU	I/O	**PIO1_11 —** General purpose digital input/output pin.
PIO1_12	-	-	-	59 [3]	I; PU	I/O	**PIO1_12 —** General purpose digital input/output pin.
PIO1_13/$\overline{\text{DTR}}$/ CT16B0_MAT0/TXD	-	B8	36	47 [3]	I; PU	I/O	**PIO1_13 —** General purpose digital input/output pin.
					-	O	**$\overline{\text{DTR}}$ —** Data Terminal Ready output for USART.
					-	O	**CT16B0_MAT0 —** Match output 0 for 16-bit timer 0.
					-	O	**TXD —** Transmitter output for USART.
PIO1_14/$\overline{\text{DSR}}$/ CT16B0_MAT1/RXD	-	A8	37	49 [3]	I; PU	I/O	**PIO1_14 —** General purpose digital input/output pin.
					-	I	**$\overline{\text{DSR}}$ —** Data Set Ready input for USART.
					-	O	**CT16B0_MAT1 —** Match output 1 for 16-bit timer 0.
					-	I	**RXD —** Receiver input for USART.
PIO1_15/$\overline{\text{DCD}}$/ CT16B0_MAT2/SCK1	28	A4	43	57 [3]	I; PU	I/O	**PIO1_15 —** General purpose digital input/output pin.
						I	**$\overline{\text{DCD}}$ —** Data Carrier Detect input for USART.
					-	O	**CT16B0_MAT2 —** Match output 2 for 16-bit timer 0.
					-	I/O	**SCK1 —** Serial clock for SSP1.

Table 3. Pin description

Symbol	Pin HVQFN33	Pin TFBGA48	Pin LQFP48	Pin LQFP64	Reset state [1]	Type	Description
PIO1_16/$\overline{\text{RI}}$/ CT16B0_CAP0	-	A2	48	63 [3]	I; PU	I/O	**PIO1_16 —** General purpose digital input/output pin.
					-	I	**$\overline{\text{RI}}$ —** Ring Indicator input for USART.
					-	I	**CT16B0_CAP0 —** Capture input 0 for 16-bit timer 0.
PIO1_17/CT16B0_CAP1/ RXD	-	-	-	23 [3]	I; PU	I/O	**PIO1_17 —** General purpose digital input/output pin.
					-	I	**CT16B0_CAP1 —** Capture input 1 for 16-bit timer 0.
					-	I	**RXD —** Receiver input for USART.
PIO1_18/CT16B1_CAP1/ TXD	-	-	-	28 [3]	I; PU	I/O	**PIO1_18 —** General purpose digital input/output pin.
					-	I	**CT16B1_CAP1 —** Capture input 1 for 16-bit timer 1.
					-	O	**TXD —** Transmitter output for USART.
PIO1_19/$\overline{\text{DTR}}$/SSEL1	1	B1	2	3 [3]	I; PU	I/O	**PIO1_19 —** General purpose digital input/output pin.
					-	O	**$\overline{\text{DTR}}$ —** Data Terminal Ready output for USART.
					-	I/O	**SSEL1 —** Slave select for SSP1.
PIO1_20/$\overline{\text{DSR}}$/SCK1	-	H1	13	18 [3]	I; PU	I/O	**PIO1_20 —** General purpose digital input/output pin.
					-	I	**$\overline{\text{DSR}}$ —** Data Set Ready input for USART.
					-	I/O	**SCK1 —** Serial clock for SSP1.
PIO1_21/$\overline{\text{DCD}}$/MISO1	-	G8	26	35 [3]	I; PU	I/O	**PIO1_21 —** General purpose digital input/output pin.
					-	I	**$\overline{\text{DCD}}$ —** Data Carrier Detect input for USART.
					-	I/O	**MISO1 —** Master In Slave Out for SSP1.
PIO1_22/$\overline{\text{RI}}$/MOSI1	-	A7	38	51 [3]	I; PU	I/O	**PIO1_22 —** General purpose digital input/output pin.
					-	I	**$\overline{\text{RI}}$ —** Ring Indicator input for USART.
					-	I/O	**MOSI1 —** Master Out Slave In for SSP1.
PIO1_23/CT16B1_MAT1/ SSEL1	-	H4	18	24 [3]	I; PU	I/O	**PIO1_23 —** General purpose digital input/output pin.
					-	O	**CT16B1_MAT1 —** Match output 1 for 16-bit timer 1.
					-	I/O	**SSEL1 —** Slave select for SSP1.
PIO1_24/CT32B0_MAT0	-	G6	21	27 [3]	I; PU	I/O	**PIO1_24 —** General purpose digital input/output pin.
					-	O	**CT32B0_MAT0 —** Match output 0 for 32-bit timer 0.
PIO1_25/CT32B0_MAT1	-	A1	1	2 [3]	I; PU	I/O	**PIO1_25 —** General purpose digital input/output pin.
					-	O	**CT32B0_MAT1 —** Match output 1 for 32-bit timer 0.
PIO1_26/CT32B0_MAT2/ RXD/IOH_19	-	G2	11	14 [3]	I; PU	I/O	**PIO1_26 —** General purpose digital input/output pin.
					-	O	**CT32B0_MAT2 —** Match output 2 for 32-bit timer 0.
					-	I	**RXD —** Receiver input for USART.
					-	I/O	**IOH_19 —** I/O Handler input/output 19. (LPC11U37HFBD64/401 only.)
PIO1_27/CT32B0_MAT3/ TXD/IOH_20	-	G1	12	15 [3]	I; PU	I/O	**PIO1_27 —** General purpose digital input/output pin.
					-	O	**CT32B0_MAT3 —** Match output 3 for 32-bit timer 0.
					-	O	**TXD —** Transmitter output for USART.
					-	I/O	**IOH_20 —** I/O Handler input/output 20. (LPC11U37HFBD64/401 only.)

Table 3. Pin description

Symbol	Pin HVQFN33	Pin TFBGA48	Pin LQFP48	Pin LQFP64	Reset state [1]	Type	Description
PIO1_28/CT32B0_CAP0/ SCLK	-	H7	24	31 [3]	I; PU	I/O	**PIO1_28 —** General purpose digital input/output pin.
					-	I	**CT32B0_CAP0 —** Capture input 0 for 32-bit timer 0.
					-	I/O	**SCLK —** Serial clock input/output for USART in synchronous mode.
PIO1_29/SCK0/ CT32B0_CAP1	-	D7	31	41 [3]	I; PU	I/O	**PIO1_29 —** General purpose digital input/output pin.
					-	I/O	**SCK0 —** Serial clock for SSP0.
					-	I	**CT32B0_CAP1 —** Capture input 1 for 32-bit timer 0.
PIO1_31	-	-	25	- [3]	I; PU	I/O	**PIO1_31 —** General purpose digital input/output pin.
USB_DM	13	G5	19	25 [7]	F	-	**USB_DM —** USB bidirectional D− line.
USB_DP	14	H5	20	26 [7]	F	-	**USB_DP —** USB bidirectional D+ line.
XTALIN	4	D1	6	8 [8]	-	-	Input to the oscillator circuit and internal clock generator circuits. Input voltage must not exceed 1.8 V.
XTALOUT	5	E1	7	9 [8]	-	-	Output from the oscillator amplifier.
V_{DD}	6; 29	B4; E2	8; 44	10; 33; 48; 58	-	-	Supply voltage to the internal regulator, the external rail, and the ADC. Also used as the ADC reference voltage.
V_{SS}	33	B5; D2	5; 41	7; 54	-	-	Ground.

[1] Pin state at reset for default function: I = Input; O = Output; PU = internal pull-up enabled; IA = inactive, no pull-up/down enabled; F = floating; If the pins are not used, tie floating pins to ground or power to minimize power consumption.

[2] 5 V tolerant pad. $\overline{\text{RESET}}$ functionality is not available in Deep power-down mode. Use the WAKEUP pin to reset the chip and wake up from Deep power-down mode. An external pull-up resistor is required on this pin for the Deep power-down mode. See Figure 32 for the reset pad configuration.

[3] 5 V tolerant pad providing digital I/O functions with configurable pull-up/pull-down resistors and configurable hysteresis (see Figure 31).

[4] I^2C-bus pin compliant with the I^2C-bus specification for I^2C standard mode, I^2C Fast-mode, and I^2C Fast-mode Plus. The pin requires an external pull-up to provide output functionality. When power is switched off, this pin is floating and does not disturb the I2C lines. Open-drain configuration applies to all functions on this pin.

[5] 5 V tolerant pad providing digital I/O functions with configurable pull-up/pull-down resistors and configurable hysteresis (see Figure 31); includes high-current output driver.

[6] 5 V tolerant pad providing digital I/O functions with configurable pull-up/pull-down resistors, configurable hysteresis, and analog input. When configured as a ADC input, digital section of the pad is disabled and the pin is not 5 V tolerant (see Figure 31); includes digital input glitch filter.

[7] Pad provides USB functions. It is designed in accordance with the USB specification, revision 2.0 (Full-speed and Low-speed mode only). This pad is not 5 V tolerant.

[8] When the system oscillator is not used, connect XTALIN and XTALOUT as follows: XTALIN can be left floating or can be grounded (grounding is preferred to reduce susceptibility to noise). Leave XTALOUT floating.

7.8.1 Features

- GPIO pins can be configured as input or output by software.
- All GPIO pins default to inputs with interrupt disabled at reset.
- Pin registers allow pins to be sensed and set individually.
- Up to eight GPIO pins can be selected from all GPIO pins to create an edge- or level-sensitive GPIO interrupt request.
- Any pin or pins in each port can trigger a port interrupt.

7.9 USB interface

The Universal Serial Bus (USB) is a 4-wire bus that supports communication between a host and one or more (up to 127) peripherals. The host controller allocates the USB bandwidth to attached devices through a token-based protocol. The bus supports hot-plugging and dynamic configuration of the devices. The host controller initiates all transactions.

The LPC11U3x USB interface consists of a full-speed device controller with on-chip PHY (PHYsical layer) for device functions.

Remark: Configure the LPC11U3x in default power mode with the power profiles before using the USB (see Section 7.18.5.1). Do not use the USB with the part in performance, efficiency, or low-power mode.

7.9.1 Full-speed USB device controller

The device controller enables 12 Mbit/s data exchange with a USB Host controller. It consists of a register interface, serial interface engine, and endpoint buffer memory. The serial interface engine decodes the USB data stream and writes data to the appropriate endpoint buffer. The status of a completed USB transfer or error condition is indicated via status registers. If enabled, an interrupt is generated.

7.9.1.1 Features

- Dedicated USB PLL available.
- Fully compliant with *USB 2.0 specification (full speed)*.
- Supports 10 physical (5 logical) endpoints including one control endpoint.
- Single and double buffering supported.
- Each non-control endpoint supports bulk, interrupt, or isochronous endpoint types.
- Supports wake-up from Deep-sleep mode and Power-down mode on USB activity and remote wake-up.
- Supports SoftConnect.

7.10 I/O Handler (LPC11U37HFBD64/401 only)

The I/O Handler is a software library-supported hardware engine for emulating serial interfaces and off-loading the CPU for processing-intensive functions. The I/O Handler can emulate, among others, DMA and serial interfaces such as UART, I^2C, or I^2S with no or very low additional CPU load. The software libraries are available with supporting

7.15 General purpose external event counter/timers

The LPC11U3x includes two 32-bit counter/timers and two 16-bit counter/timers. The counter/timer is designed to count cycles of the system derived clock. It can optionally generate interrupts or perform other actions at specified timer values, based on four match registers. Each counter/timer also includes one capture input to trap the timer value when an input signal transitions, optionally generating an interrupt.

7.15.1 Features

- A 32-bit/16-bit timer/counter with a programmable 32-bit/16-bit prescaler.
- Counter or timer operation.
- Up to two capture channels per timer, that can take a snapshot of the timer value when an input signal transitions. A capture event can also generate an interrupt.
- Four match registers per timer that allow:
  - Continuous operation with optional interrupt generation on match.
  - Stop timer on match with optional interrupt generation.
  - Reset timer on match with optional interrupt generation.
- Up to four external outputs corresponding to match registers, with the following capabilities:
  - Set LOW on match.
  - Set HIGH on match.
  - Toggle on match.
  - Do nothing on match.
- The timer and prescaler can be configured to be cleared on a designated capture event. This feature permits easy pulse-width measurement by clearing the timer on the leading edge of an input pulse and capturing the timer value on the trailing edge.

7.16 System tick timer

The ARM Cortex-M0 includes a system tick timer (SYSTICK) that is intended to generate a dedicated SYSTICK exception at a fixed time interval (typically 10 ms).

7.17 Windowed WatchDog Timer (WWDT)

The purpose of the WWDT is to prevent an unresponsive system state. If software fails to update the watchdog within a programmable time window, the watchdog resets the microcontroller

7.17.1 Features

- Internally resets chip if not periodically reloaded during the programmable time-out period.
- Optional windowed operation requires reload to occur between a minimum and maximum time period, both programmable.
- Optional warning interrupt can be generated at a programmable time before watchdog time-out.

- Software enables the WWDT, but a hardware reset or a watchdog reset/interrupt is required to disable the WWDT.
- Incorrect feed sequence causes reset or interrupt, if enabled.
- Flag to indicate watchdog reset.
- Programmable 24-bit timer with internal prescaler.
- Selectable time period from ($T_{cy(WDCLK)} \times 256 \times 4$) to ($T_{cy(WDCLK)} \times 2^{24} \times 4$) in multiples of $T_{cy(WDCLK)} \times 4$.
- The Watchdog Clock (WDCLK) source can be selected from the IRC or the dedicated watchdog oscillator (WDO). The clock source selection provides a wide range of potential timing choices of watchdog operation under different power conditions.

7.18 Clocking and power control

7.18.1 Integrated oscillators

The LPC11U3x include three independent oscillators: the system oscillator, the Internal RC oscillator (IRC), and the watchdog oscillator. Each oscillator can be used for more than one purpose as required in a particular application.

Following reset, the LPC11U3x operates from the internal RC oscillator until software switches to a different clock source. The IRC allows the system to operate without any external crystal and the bootloader code to operate at a known frequency.

See Figure 7 for an overview of the LPC11U3x clock generation.

consumption by eliminating all dynamic power use in any peripherals that are not required for the application. Selected peripherals have their own clock divider which provides even better power control.

7.18.5.1 Power profiles

The power consumption in Active and Sleep modes can be optimized for the application through simple calls to the power profile. The power configuration routine configures the LPC11U3x for one of the following power modes:

- Default mode corresponding to power configuration after reset.
- CPU performance mode corresponding to optimized processing capability.
- Efficiency mode corresponding to optimized balance of current consumption and CPU performance.
- Low-current mode corresponding to lowest power consumption.

In addition, the power profile includes routines to select the optimal PLL settings for a given system clock and PLL input clock.

Remark: When using the USB, configure the LPC11U3x in Default mode.

7.18.5.2 Sleep mode

When Sleep mode is entered, the clock to the core is stopped. Resumption from the Sleep mode does not need any special sequence but re-enabling the clock to the ARM core.

In Sleep mode, execution of instructions is suspended until either a reset or interrupt occurs. Peripheral functions continue operation during Sleep mode and can generate interrupts to cause the processor to resume execution. Sleep mode eliminates dynamic power used by the processor itself, by memory systems and related controllers, and by internal buses.

7.18.5.3 Deep-sleep mode

In Deep-sleep mode, the LPC11U3x is in Sleep-mode and all peripheral clocks and all clock sources are off except for the IRC. The IRC output is disabled unless the IRC is selected as input to the watchdog timer. In addition all analog blocks are shut down and the flash is in stand-by mode. In Deep-sleep mode, the application can keep the watchdog oscillator and the BOD circuit running for self-timed wake-up and BOD protection.

The LPC11U3x can wake up from Deep-sleep mode via reset, selected GPIO pins, a watchdog timer interrupt, or an interrupt generating USB port activity.

Deep-sleep mode saves power and allows for short wake-up times.

7.18.5.4 Power-down mode

In Power-down mode, the LPC11U3x is in Sleep-mode and all peripheral clocks and all clock sources are off except for watchdog oscillator if selected. In addition all analog blocks and the flash are shut down. In Power-down mode, the application can keep the BOD circuit running for BOD protection.

The LPC11U3x can wake up from Power-down mode via reset, selected GPIO pins, a watchdog timer interrupt, or an interrupt generating USB port activity.

8. Limiting values

Table 4. Limiting values

In accordance with the Absolute Maximum Rating System (IEC 60134).[1]

Symbol	Parameter	Conditions	Min	Max	Unit
V_{DD}	supply voltage (core and external rail)	[2]	–0.5	+4.6	V
V_I	input voltage	5 V tolerant digital I/O pins; $V_{DD} \geq 1.8$ V [5][2]	–0.5	+5.5	V
		$V_{DD} = 0$ V	–0.5	+3.6	V
		5 V tolerant open-drain pins PIO0_4 and PIO0_5 [2][4]	–0.5	+5.5	
V_{IA}	analog input voltage	pin configured as analog input [2] [3]	–0.5	4.6	V
I_{DD}	supply current	per supply pin	-	100	mA
I_{SS}	ground current	per ground pin	-	100	mA
I_{latch}	I/O latch-up current	$-(0.5V_{DD}) < V_I < (1.5V_{DD})$; $T_j < 125$ °C	-	100	mA
T_{stg}	storage temperature	non-operating [6]	–65	+150	°C
$T_{j(max)}$	maximum junction temperature		-	150	°C
$P_{tot(pack)}$	total power dissipation (per package)	based on package heat transfer, not device power consumption	-	1.5	W
V_{ESD}	electrostatic discharge voltage	human body model; all pins [7]	-	+6500	V

[1] The following applies to the limiting values:

a) This product includes circuitry specifically designed for the protection of its internal devices from the damaging effects of excessive static charge. Nonetheless, it is suggested that conventional precautions be taken to avoid applying greater than the rated maximum.

b) Parameters are valid over operating temperature range unless otherwise specified. All voltages are with respect to V_{SS} unless otherwise noted.

c) The limiting values are stress ratings only. Operating the part at these values is not recommended, and proper operation is not guaranteed. The conditions for functional operation are specified in Table 5.

[2] Maximum/minimum voltage above the maximum operating voltage (see Table 5) and below ground that can be applied for a short time (< 10 ms) to a device without leading to irrecoverable failure. Failure includes the loss of reliability and shorter lifetime of the device.

[3] See Table 6 for maximum operating voltage.

[4] V_{DD} present or not present. Compliant with the I^2C-bus standard. 5.5 V can be applied to this pin when V_{DD} is powered down.

[5] Including voltage on outputs in 3-state mode.

[6] The maximum non-operating storage temperature is different than the temperature for required shelf life which should be determined based on required shelf lifetime. Please refer to the JEDEC spec (J-STD-033B.1) for further details.

[7] Human body model: equivalent to discharging a 100 pF capacitor through a 1.5 kΩ series resistor.

11. Application information

11.1 Suggested USB interface solutions

The USB device can be connected to the USB as self-powered device (see Figure 27) or bus-powered device (see Figure 28).

On the LPC11U3x, the PIO0_3/USB_VBUS pin is 5 V tolerant only when V_{DD} is applied and at operating voltage level. Therefore, if the USB_VBUS function is connected to the USB connector and the device is self-powered, the USB_VBUS pin must be protected for situations when V_{DD} = 0 V.

If V_{DD} is always at operating level while VBUS = 5 V, the USB_VBUS pin can be connected directly to the VBUS pin on the USB connector.

For systems where V_{DD} can be 0 V and VBUS is directly applied to the VBUS pin, precautions must be taken to reduce the voltage to below 3.6 V, which is the maximum allowable voltage on the USB_VBUS pin in this case.

One method is to use a voltage divider to connect the USB_VBUS pin to the VBUS on the USB connector. The voltage divider ratio should be such that the USB_VBUS pin will be greater than $0.7V_{DD}$ to indicate a logic HIGH while below the 3.6 V allowable maximum voltage.

For the following operating conditions

$VBUS_{max}$ = 5.25 V

V_{DD} = 3.6 V,

the voltage divider should provide a reduction of 3.6 V/5.25 V or ~0.686 V.

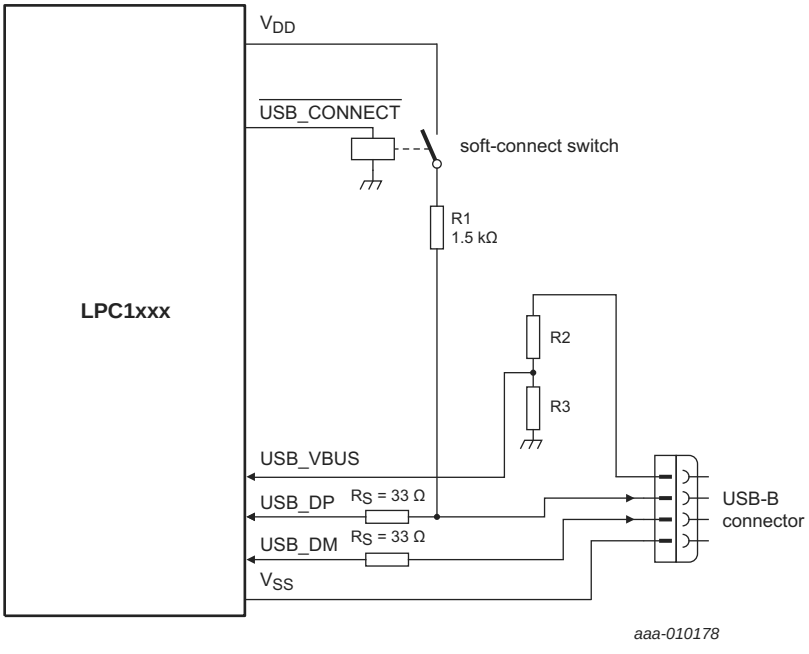

Fig 27. USB interface on a self-powered device where USB_VBUS = 5 V

11.2 XTAL input

The input voltage to the on-chip oscillators is limited to 1.8 V. If the oscillator is driven by a clock in slave mode, it is recommended that the input be coupled through a capacitor with C_i = 100 pF. To limit the input voltage to the specified range, choose an additional capacitor to ground C_g which attenuates the input voltage by a factor $C_i/(C_i + C_g)$. In slave mode, a minimum of 200 mV (RMS) is needed.

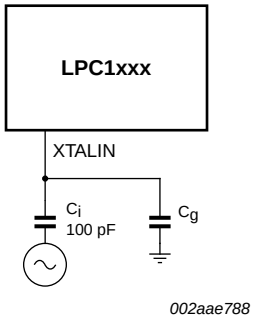

Fig 29. Slave mode operation of the on-chip oscillator

In slave mode, couple the input clock signal with a capacitor of 100 pF (Figure 29), with an amplitude between 200 mV (RMS) and 1000 mV (RMS). This signal corresponds to a square wave signal with a signal swing of between 280 mV and 1.4 V. The XTALOUT pin in this configuration can be left unconnected.

External components and models used in oscillation mode are shown in Figure 30 and in Table 18 and Table 19. Since the feedback resistance is integrated on chip, only a crystal and the capacitances C_{X1} and C_{X2} need to be connected externally in case of fundamental mode oscillation (L, C_L and R_S represent the fundamental frequency). Capacitance C_P in Figure 30 represents the parallel package capacitance and must not be larger than 7 pF. Parameters F_{OSC}, C_L, R_S and C_P are supplied by the crystal manufacturer.

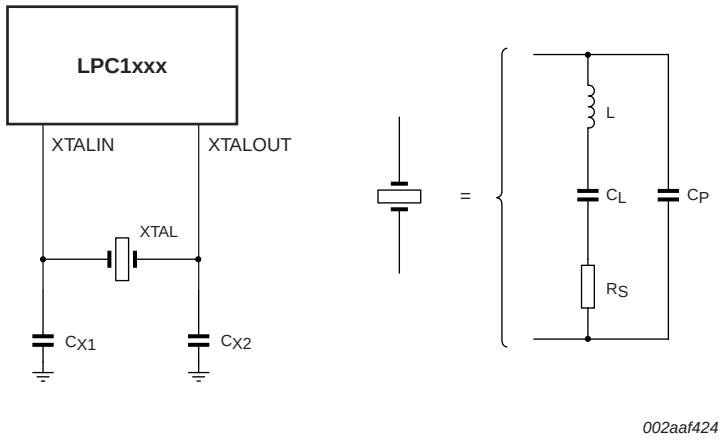

Fig 30. Oscillator modes and models: oscillation mode of operation and external crystal model used for C_{X1}/C_{X2} evaluation

Table 18. Recommended values for C_{X1}/C_{X2} in oscillation mode (crystal and external components parameters) low frequency mode

Fundamental oscillation frequency F_{OSC}	Crystal load capacitance C_L	Maximum crystal series resistance R_S	External load capacitors C_{X1}, C_{X2}
1 MHz to 5 MHz	10 pF	< 300 Ω	18 pF, 18 pF
	20 pF	< 300 Ω	39 pF, 39 pF
	30 pF	< 300 Ω	57 pF, 57 pF
5 MHz to 10 MHz	10 pF	< 300 Ω	18 pF, 18 pF
	20 pF	< 200 Ω	39 pF, 39 pF
	30 pF	< 100 Ω	57 pF, 57 pF
10 MHz to 15 MHz	10 pF	< 160 Ω	18 pF, 18 pF
	20 pF	< 60 Ω	39 pF, 39 pF
15 MHz to 20 MHz	10 pF	< 80 Ω	18 pF, 18 pF

Table 19. Recommended values for C_{X1}/C_{X2} in oscillation mode (crystal and external components parameters) high frequency mode

Fundamental oscillation frequency F_{OSC}	Crystal load capacitance C_L	Maximum crystal series resistance R_S	External load capacitors C_{X1}, C_{X2}
15 MHz to 20 MHz	10 pF	< 180 Ω	18 pF, 18 pF
	20 pF	< 100 Ω	39 pF, 39 pF
20 MHz to 25 MHz	10 pF	< 160 Ω	18 pF, 18 pF
	20 pF	< 80 Ω	39 pF, 39 pF

11.3 XTAL Printed-Circuit Board (PCB) layout guidelines

Follow these guidelines for PCB layout:

- Connect the crystal on the PCB as close as possible to the oscillator input and output pins of the chip.
- Take care that the load capacitors C_{x1}, C_{x2}, and C_{x3} in case of third overtone crystal use have a common ground plane.
- Connect the external components to the ground plain.
- To keep parasitics and the noise coupled in via the PCB as small as possible, keep loops as small as possible.
- Choose smaller values of C_{x1} and C_{x2} if parasitics of the PCB layout increase.

11.4 Standard I/O pad configuration

Figure 31 shows the possible pin modes for standard I/O pins with analog input function:

- Digital output driver
- Digital input: Pull-up enabled/disabled
- Digital input: Pull-down enabled/disabled
- Digital input: Repeater mode enabled/disabled
- Analog input

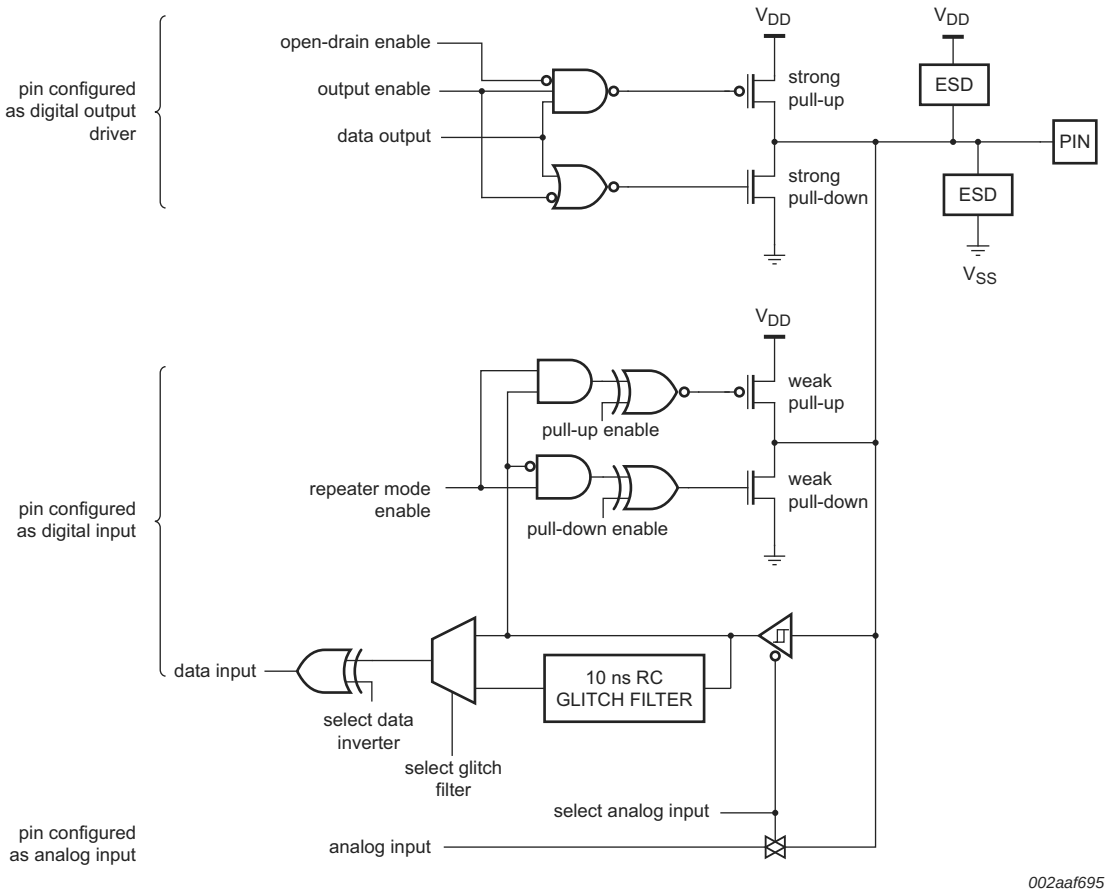

Fig 31. Standard I/O pad configuration

11.8.3 I/O Handler I²C

The I/O Handler I²C library allows to have an additional I²C-bus master. I²C read, I²C write and combined I²C read/write are supported. Data is automatically read from and written to user-defined buffers.

The I/O Handler I²C library combined with the on-chip I²C module allows to have two distinct I²C buses, allowing to separate low-speed from high-speed devices or bridging two I²C buses.

11.8.4 I/O Handler DMA

The I/O Handler DMA library offers DMA-like functionality. Four types of transfer are supported: memory to memory, memory to peripheral, peripheral to memory and peripheral to peripheral. Supported peripherals are USART, SSP0/1, ADC and GPIO. DMA transfers can be triggered by the source/target peripheral, software, counter/timer module CT16B1, or I/O Handler pin PIO1_6/IOH_16.

16. Revision history

Table 21. Revision history

Document ID	Release date	Data sheet status	Change notice	Supersedes
LPC11U3X v.2.3	20170208	Product data sheet	-	LPC11U3X v.2.2
Modifications:	• Updated Section 1 “General description”: Software libraries for multiple I/O Handler applications are available on nxp.com.			
LPC11U3X v.2.2	20140311	Product data sheet	-	LPC11U3X v.2.1
Modifications:	• Use of USB_CONNECT signal explained in Section 11.1 “Suggested USB interface solutions”. • Open-drain I^2C-bus and $\overline{\text{RESET}}$ pin descriptions clarified. See Table 3.			
LPC11U3X v.2.1	20131230	Product data sheet	-	LPC11U3X v.2
Modifications:		Add reserved function to pins PIO0_8/MISO0/CT16B0_MAT0/R/IOH_6 and PIO0_9/MOSI0/CT16B0_MAT1/R/IOH_7.		
LPC11U3X v.2	20131125	Product data sheet	-	LPC11U3X v.1.1
Modifications:		• Part LPC11U37HFBD64/401 with I/O handler added. • Additional I/O Handler pin functions added in Table 3. • Typical range of watchdog oscillator frequency changed to 9.4 kHz to 2.3 MHz.See Table 13. • Section 11.8 “I/O Handler software library applications” added. • Updated Section 11.1 “Suggested USB interface solutions” for clarity. • Condition V_{DD} = 0 V added to Parameter V_I in Table 5 for clarity.		
LPC11U3X v.1.1	20130924	Product data sheet	-	LPC11U3X v.1
Modifications:		• Removed the footnote “The peak current is limited to 25 times the corresponding maximum current.” in Table 4. • Table 3: Added “5 V tolerant pad” to $\overline{\text{RESET}}$/PIO0_0 table note. • Table 7: Removed BOD interrupt level 0. • Programmable glitch filter is enabled by default. See Section 7.7.1. • Added Section 11.6 “ADC effective input impedance”. • Table 5 “Static characteristics” added Pin capacitance section. • Updated Section 11.1 “Suggested USB interface solutions”. • Table 4 “Limiting values”: – Updated V_{DD} min and max. – Updated V_I conditions. • Table 10 “EEPROM characteristics”: – Removed f_{clk} and t_{er}; the user does not have control over these parameters. – Changed the t_{prog} from 1.1 ms to 2.9 ms; the EEPROM IAP always does an erase and program, thus the total program time is $t_{er} + t_{prog}$. • Changed title of Figure 29 from “USB interface on a self-powered device” to “USB interface with soft-connect”. • Section 10.7 “USB interface” added. Parameter t_{EOPR1} and t_{EOPR2} renamed to t_{EOPR}.

17. Legal information

17.1 Data sheet status

Document status[1][2]	Product status[3]	Definition
Objective [short] data sheet	Development	This document contains data from the objective specification for product development.
Preliminary [short] data sheet	Qualification	This document contains data from the preliminary specification.
Product [short] data sheet	Production	This document contains the product specification.

[1] Please consult the most recently issued document before initiating or completing a design.

[2] The term 'short data sheet' is explained in section "Definitions".

[3] The product status of device(s) described in this document may have changed since this document was published and may differ in case of multiple devices. The latest product status information is available on the Internet at URL http://www.nxp.com.

17.2 Definitions

Draft — The document is a draft version only. The content is still under internal review and subject to formal approval, which may result in modifications or additions. NXP Semiconductors does not give any representations or warranties as to the accuracy or completeness of information included herein and shall have no liability for the consequences of use of such information.

Short data sheet — A short data sheet is an extract from a full data sheet with the same product type number(s) and title. A short data sheet is intended for quick reference only and should not be relied upon to contain detailed and full information. For detailed and full information see the relevant full data sheet, which is available on request via the local NXP Semiconductors sales office. In case of any inconsistency or conflict with the short data sheet, the full data sheet shall prevail.

Product specification — The information and data provided in a Product data sheet shall define the specification of the product as agreed between NXP Semiconductors and its customer, unless NXP Semiconductors and customer have explicitly agreed otherwise in writing. In no event however, shall an agreement be valid in which the NXP Semiconductors product is deemed to offer functions and qualities beyond those described in the Product data sheet.

17.3 Disclaimers

Limited warranty and liability — Information in this document is believed to be accurate and reliable. However, NXP Semiconductors does not give any representations or warranties, expressed or implied, as to the accuracy or completeness of such information and shall have no liability for the consequences of use of such information. NXP Semiconductors takes no responsibility for the content in this document if provided by an information source outside of NXP Semiconductors.

In no event shall NXP Semiconductors be liable for any indirect, incidental, punitive, special or consequential damages (including - without limitation - lost profits, lost savings, business interruption, costs related to the removal or replacement of any products or rework charges) whether or not such damages are based on tort (including negligence), warranty, breach of contract or any other legal theory.

Notwithstanding any damages that customer might incur for any reason whatsoever, NXP Semiconductors' aggregate and cumulative liability towards customer for the products described herein shall be limited in accordance with the *Terms and conditions of commercial sale* of NXP Semiconductors.

Right to make changes — NXP Semiconductors reserves the right to make changes to information published in this document, including without limitation specifications and product descriptions, at any time and without notice. This document supersedes and replaces all information supplied prior to the publication hereof.

Suitability for use — NXP Semiconductors products are not designed, authorized or warranted to be suitable for use in life support, life-critical or safety-critical systems or equipment, nor in applications where failure or malfunction of an NXP Semiconductors product can reasonably be expected to result in personal injury, death or severe property or environmental damage. NXP Semiconductors and its suppliers accept no liability for inclusion and/or use of NXP Semiconductors products in such equipment or applications and therefore such inclusion and/or use is at the customer's own risk.

Applications — Applications that are described herein for any of these products are for illustrative purposes only. NXP Semiconductors makes no representation or warranty that such applications will be suitable for the specified use without further testing or modification.

Customers are responsible for the design and operation of their applications and products using NXP Semiconductors products, and NXP Semiconductors accepts no liability for any assistance with applications or customer product design. It is customer's sole responsibility to determine whether the NXP Semiconductors product is suitable and fit for the customer's applications and products planned, as well as for the planned application and use of customer's third party customer(s). Customers should provide appropriate design and operating safeguards to minimize the risks associated with their applications and products.

NXP Semiconductors does not accept any liability related to any default, damage, costs or problem which is based on any weakness or default in the customer's applications or products, or the application or use by customer's third party customer(s). Customer is responsible for doing all necessary testing for the customer's applications and products using NXP Semiconductors products in order to avoid a default of the applications and the products or of the application or use by customer's third party customer(s). NXP does not accept any liability in this respect.

Limiting values — Stress above one or more limiting values (as defined in the Absolute Maximum Ratings System of IEC 60134) will cause permanent damage to the device. Limiting values are stress ratings only and (proper) operation of the device at these or any other conditions above those given in the Recommended operating conditions section (if present) or the Characteristics sections of this document is not warranted. Constant or repeated exposure to limiting values will permanently and irreversibly affect the quality and reliability of the device.

Terms and conditions of commercial sale — NXP Semiconductors products are sold subject to the general terms and conditions of commercial sale, as published at http://www.nxp.com/profile/terms, unless otherwise agreed in a valid written individual agreement. In case an individual agreement is concluded only the terms and conditions of the respective agreement shall apply. NXP Semiconductors hereby expressly objects to applying the customer's general terms and conditions with regard to the purchase of NXP Semiconductors products by customer.

No offer to sell or license — Nothing in this document may be interpreted or construed as an offer to sell products that is open for acceptance or the grant, conveyance or implication of any license under any copyrights, patents or other industrial or intellectual property rights.

Export control — This document as well as the item(s) described herein may be subject to export control regulations. Export might require a prior authorization from competent authorities.

Non-automotive qualified products — Unless this data sheet expressly states that this specific NXP Semiconductors product is automotive qualified, the product is not suitable for automotive use. It is neither qualified nor tested in accordance with automotive testing or application requirements. NXP Semiconductors accepts no liability for inclusion and/or use of non-automotive qualified products in automotive equipment or applications.

In the event that customer uses the product for design-in and use in automotive applications to automotive specifications and standards, customer (a) shall use the product without NXP Semiconductors' warranty of the product for such automotive applications, use and specifications, and (b) whenever customer uses the product for automotive applications beyond NXP Semiconductors' specifications such use shall be solely at customer's own risk, and (c) customer fully indemnifies NXP Semiconductors for any liability, damages or failed product claims resulting from customer design and use of the product for automotive applications beyond NXP Semiconductors' standard warranty and NXP Semiconductors' product specifications.
