

Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "<u>Embedded -</u> <u>Microcontrollers</u>"

Details

Details	
Product Status	Active
Core Processor	R8C
Core Size	16-Bit
Speed	20MHz
Connectivity	I ² C, LINbus, SIO, SSU, UART/USART
Peripherals	POR, PWM, Voltage Detect, WDT
Number of I/O	19
Program Memory Size	24KB (24K x 8)
Program Memory Type	FLASH
EEPROM Size	4K x 8
RAM Size	2K x 8
Voltage - Supply (Vcc/Vdd)	1.8V ~ 5.5V
Data Converters	A/D 8x10b; D/A 2x8b
Oscillator Type	Internal
Operating Temperature	-20°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	24-WFQFN Exposed Pad
Supplier Device Package	24-HWQFN (4x4)
Purchase URL	https://www.e-xfl.com/product-detail/renesas-electronics-america/r5f213g5mnnp-u0

Email: info@E-XFL.COM

Address: Room A, 16/F, Full Win Commercial Centre, 573 Nathan Road, Mongkok, Hong Kong

1.1.2 Specifications

Tables 1.1 and 1.2 outline the Specifications for R8C/3GM Group.

ltem	Function	Specification
CPU	Central processing	R8C CPU core
	unit	 Number of fundamental instructions: 89
		Minimum instruction execution time:
		50 ns (f(XIN) = 20 MHz, VCC = 2.7 to 5.5 V)
		200 ns (f(XIN) = 5 MHz, VCC = 1.8 to 5.5 V)
		• Multiplier: 16 bits \times 16 bits \rightarrow 32 bits
		• Multiply-accumulate instruction: 16 bits \times 16 bits + 32 bits \rightarrow 32 bits
		Operation mode: Single-chip mode (address space: 1 Mbyte)
Memory	ROM, RAM, Data	Refer to Table 1.3 Product List for R8C/3GM Group.
mornery	flash	
Power Supply	Voltage detection	Power-on reset
Voltage	circuit	Voltage detection 3 (detection level of voltage detection 0 and voltage
Detection	onoun	detection 1 selectable)
I/O Ports	Programmable I/O	Input-only: 1 pin
1/01/01/3	ports	CMOS I/O ports: 19, selectable pull-up resistor
	pono	High current drive ports: 19
Clock	Clock generation	4 circuits: XIN clock oscillation circuit,
CIOCK	circuits	XCIN clock oscillation circuit (32 kHz),
	Circuits	High-speed on-chip oscillator (with frequency adjustment function),
		Low-speed on-chip oscillator
		Oscillation stop detection: XIN clock oscillation stop detection function
		• Frequency divider circuit: Dividing selectable 1, 2, 4, 8, and 16
		Low power consumption modes: Standard appreting mode (kigh appendiate kigh appendiate
		Standard operating mode (high-speed clock, low-speed clock, high-speed
		on-chip oscillator, low-speed on-chip oscillator), wait mode, stop mode
1 4 4		Real-time clock (timer RE)
Interrupts		Number of interrupt vectors: 69
		• External Interrupt: 7 (INT × 3, Key input × 4)
		Priority levels: 7 levels
Watchdog Tim	er	• 14 bits × 1 (with prescaler)
		Reset start selectable
		Low-speed on-chip oscillator for watchdog timer selectable
DTC (Data Tra	insfer Controller)	• 1 channel
		Activation sources: 23
		Transfer modes: 2 (normal mode, repeat mode)
Timer	Timer RA	8 bits x 1 (with 8-bit prescaler)
		Timer mode (period timer), pulse output mode (output level inverted every
		period), event counter mode, pulse width measurement mode, pulse period
		measurement mode
	Timer RB	8 bits × 1 (with 8-bit prescaler)
		Timer mode (period timer), programmable waveform generation mode (PWM
		output), programmable one-shot generation mode, programmable wait one-
		shot generation mode
	Timer RC	16 bits x 1 (with 4 capture/compare registers)
		Timer mode (input capture function, output compare function), PWM mode
		(output 3 pins), PWM2 mode (PWM output pin)
	Timer RE	8 bits × 1
		Real-time clock mode (count seconds, minutes, hours, days of week)

Table 1.1 Specifications for R8C/3GM Group (1)

1.4 Pin Assignment

Figure 1.3 shows Pin Assignment (Top View) of PWQN0024KC-A Package. Table 1.4 outlines the Pin Name Information by Pin Number.

1.5 Pin Functions

Tables 1.5 and 1.6 list Pin Functions.

Table 1.5Pin Functions (1)

Item	Pin Name	I/O Type	Description	
Power supply input	VCC, VSS	-	Apply 1.8 V to 5.5 V to the VCC pin. Apply 0 V to the VSS pin.	
Analog power supply input	AVCC, AVSS	-	Power supply for the A/D converter. Connect a capacitor between AVCC and AVSS.	
Reset input	RESET	I	Input "L" on this pin resets the MCU.	
MODE	MODE	I	Connect this pin to VCC via a resistor.	
XIN clock input	XIN	I	These pins are provided for XIN clock generation circuit I/O. Connect a ceramic resonator or a crystal oscillator between the XIN and XOUT pins ⁽¹⁾ . To use an external clock, input it	
XIN clock output	XIN clock output XOUT I/O I the XIN and XOUT pins (7). To the XOUT pin and leave the X			
XCIN clock input	XCIN	I	These pins are provided for XCIN clock generation circuit I/O. Connect a crystal oscillator between the XCIN and XCOUT	
XCIN clock output	XCOUT	0	pins ⁽¹⁾ . To use an external clock, input it to the XCIN pin and leave the XCOUT pin open.	
INT interrupt input	INTO, INT1, INT3	I	INT interrupt input pins. INT0 is timer RB, and RC input pin.	
Key input interrupt	KI0 to KI3	I	Key input interrupt input pins	
Timer RA	TRAIO	I/O	Timer RA I/O pin	
	TRAO	0	Timer RA output pin	
Timer RB	TRBO	0	Timer RB output pin	
Timer RC	TRCCLK	Ι	External clock input pin	
	TRCTRG	I	External trigger input pin	
	TRCIOA, TRCIOB, TRCIOC, TRCIOD	I/O	Timer RC I/O pins	
Serial interface	CLK0, CLK2	I/O	Transfer clock I/O pins	
	RXD0, RXD2	I	Serial data input pins	
	TXD0, TXD2	0	Serial data output pins	
	CTS2	I	Transmission control input pin	
	RTS2	0	Reception control output pin	
	SCL2	I/O	I ² C mode clock I/O pin	
	SDA2	I/O	I ² C mode data I/O pin	
I ² C bus	SCL	I/O	Clock I/O pin	
	SDA	I/O	Data I/O pin	
SSU	SSI	I/O	Data I/O pin	
	SCS	I/O	Chip-select signal I/O pin	
	SSCK	I/O	Clock I/O pin	
	SSO	I/O	Data I/O pin	

I: Input Note: I/O: Input and output

1. Refer to the oscillator manufacturer for oscillation characteristics.

O: Output

Table 5.2 Recommended Operating Conditions

Notes:

1. Vcc = 1.8 to 5.5 V and T_{opr} = -20 to 85°C (N version), unless otherwise specified.

2. The average output current indicates the average value of current measured during 100 ms.

3. fOCO40M can be used as the count source for timer RC in the range of Vcc = 2.7 V to 5.5V.

Symbol	Parameter			Conditions		Standard		Unit

Table 5.3	A/D Converter	Characteristics
-----------	---------------	-----------------

Notes:

1. Vcc/AVcc = V_{ref} = 2.2 to 5.5 V, Vss = 0 V and T_{opr} = -20 to 85°C (N version), unless otherwise specified.

2. The A/D conversion result will be undefined in wait mode, stop mode, when the flash memory stops, and in low-currentconsumption mode. Do not perform A/D conversion in these states or transition to these states during A/D conversion.

 When the analog input voltage is over the reference voltage, the A/D conversion result will be 3FFh in 10-bit mode and FFh in 8-bit mode.

Table 5.11 Voltage Detection 2 Circuit Electrical Characteristics

Notes:

- 1. The measurement condition is Vcc = 1.8 V to 5.5 V and T_{opr} = -20 to 85°C (N version).
- 2. The voltage detection level varies with detection targets. Select the level with the VCA24 bit in the VCA2 register.
- 3. Time until the voltage monitor 2 interrupt request is generated after the voltage passes Vdet2.
- 4. Necessary time until the voltage detection circuit operates after setting to 1 again after setting the VCA27 bit in the VCA2 register to 0.

Table 5.12 Power-on Reset Circuit ⁽²⁾

Symbol	Parameter	Condition		Standard			
	Faianetei	Condition	Min.	Тур.	Max.	Unit	
trth	External power Vcc rise gradient	(1)	0	-	50,000	mV/ms	

Notes:

- 1. The measurement condition is $T_{opr} = -20$ to $85^{\circ}C$ (N version), unless otherwise specified.
- 2. To use the power-on reset function, enable voltage monitor 0 reset by setting the LVDAS bit in the OFS register to 0.

 tw(por) indicates the duration the external power Vcc must be held below the valid voltage (0.5 V) to enable a power-on reset. When turning on the power after it falls with voltage monitor 0 reset disabled, maintain tw(por) for 1 ms or more.

Package Dimensions

Diagrams showing the latest package dimensions and mounting information are available in the "Packages" section of the Renesas Electronics website.

General Precautions in the Handling of MPU/MCU Products

The following usage notes are applicable to all MPU/MCU products from Renesas. For detailed usage notes on the products covered by this manual, refer to the relevant sections of the manual. If the descriptions under General Precautions in the Handling of MPU/MCU Products and in the body of the manual differ from each other, the description in the body of the manual takes precedence.

1. Handling of Unused Pins

Handle unused pins in accord with the directions given under Handling of Unused Pins in the manual.

- The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible. Unused pins should be handled as described under Handling of Unused Pins in the manual.
- 2. Processing at Power-on

The state of the product is undefined at the moment when power is supplied.

- The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the moment when power is supplied.
 - In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the moment when power is supplied until the reset process is completed.

In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the moment when power is supplied until the power reaches the level at which resetting has been specified.

3. Prohibition of Access to Reserved Addresses

Access to reserved addresses is prohibited.

- The reserved addresses are provided for the possible future expansion of functions. Do
 not access these addresses; the correct operation of LSI is not guaranteed if they are
 accessed.
- 4. Clock Signals

After applying a reset, only release the reset line after the operating clock signal has become stable. When switching the clock signal during program execution, wait until the target clock signal has stabilized.

- When the clock signal is generated with an external resonator (or from an external oscillator) during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Moreover, when switching to a clock signal produced with an external resonator (or by an external oscillator) while program execution is in progress, wait until the target clock signal is stable.
- 5. Differences between Products

Before changing from one product to another, i.e. to one with a different part number, confirm that the change will not lead to problems.

— The characteristics of MPU/MCU in the same group but having different part numbers may differ because of the differences in internal memory capacity and layout pattern. When changing to products of different part numbers, implement a system-evaluation test for each of the products.
