

Welcome to [E-XFL.COM](https://www.e-xfl.com)

Understanding Embedded - FPGAs (Field Programmable Gate Array)

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

Details

| | |
|--------------------------------|---|
| Product Status | Obsolete |
| Number of LABs/CLBs | - |
| Number of Logic Elements/Cells | - |
| Total RAM Bits | 36864 |
| Number of I/O | 84 |
| Number of Gates | 125000 |
| Voltage - Supply | 1.425V ~ 1.575V |
| Mounting Type | Surface Mount |
| Operating Temperature | -40°C ~ 100°C (TJ) |
| Package / Case | 132-WFQFN |
| Supplier Device Package | 132-QFN (8x8) |
| Purchase URL | https://www.e-xfl.com/product-detail/microsemi/a3p125-2qng132i |

RAM Contribution— P_{MEMORY}

$$P_{\text{MEMORY}} = P_{\text{AC11}} * N_{\text{BLOCKS}} * F_{\text{READ-CLOCK}} * \beta_2 + P_{\text{AC12}} * N_{\text{BLOCK}} * F_{\text{WRITE-CLOCK}} * \beta_3$$

N_{BLOCKS} is the number of RAM blocks used in the design.

$F_{\text{READ-CLOCK}}$ is the memory read clock frequency.

β_2 is the RAM enable rate for read operations.

$F_{\text{WRITE-CLOCK}}$ is the memory write clock frequency.

β_3 is the RAM enable rate for write operations—guidelines are provided in [Table 2-17 on page 2-14](#).

PLL Contribution— P_{PLL}

$$P_{\text{PLL}} = P_{\text{DC4}} + P_{\text{AC13}} * F_{\text{CLKOUT}}$$

F_{CLKOUT} is the output clock frequency.¹

Guidelines

Toggle Rate Definition

A toggle rate defines the frequency of a net or logic element relative to a clock. It is a percentage. If the toggle rate of a net is 100%, this means that this net switches at half the clock frequency. Below are some examples:

- The average toggle rate of a shift register is 100% because all flip-flop outputs toggle at half of the clock frequency.
- The average toggle rate of an 8-bit counter is 25%:
 - Bit 0 (LSB) = 100%
 - Bit 1 = 50%
 - Bit 2 = 25%
 - ...
 - Bit 7 (MSB) = 0.78125%
 - Average toggle rate = (100% + 50% + 25% + 12.5% + ... + 0.78125%) / 8

Enable Rate Definition

Output enable rate is the average percentage of time during which tristate outputs are enabled. When nontristate output buffers are used, the enable rate should be 100%.

Table 2-16 • Toggle Rate Guidelines Recommended for Power Calculation

| Component | Definition | Guideline |
|------------|----------------------------------|-----------|
| α_1 | Toggle rate of VersaTile outputs | 10% |
| α_2 | I/O buffer toggle rate | 10% |

Table 2-17 • Enable Rate Guidelines Recommended for Power Calculation

| Component | Definition | Guideline |
|-----------|--------------------------------------|-----------|
| β_1 | I/O output buffer enable rate | 100% |
| β_2 | RAM enable rate for read operations | 12.5% |
| β_3 | RAM enable rate for write operations | 12.5% |

1. The PLL dynamic contribution depends on the input clock frequency, the number of output clock signals generated by the PLL, and the frequency of each output clock. If a PLL is used to generate more than one output clock, include each output clock in the formula by adding its corresponding contribution ($P_{\text{AC14}} * F_{\text{CLKOUT}}$ product) to the total PLL contribution.

Table 2-49 • Minimum and Maximum DC Input and Output Levels
 Applicable to Standard I/O Banks

| 3.3 V LVCMOS Wide Range | Equiv. Software Default Drive Strength Option ¹ | VIL | | VIH | | VOL | VOH | IOL | IOH | IOSL | IOSH | IIL ² | IIH ³ |

Notes:

1. The minimum drive strength for any LVCMOS 3.3 V software configuration when run in wide range is ±100 μA. Drive strength displayed in the software is supported for normal range only. For a detailed I/V curve, refer to the IBIS models.
2. IIL is the input leakage current per I/O pin over recommended operation conditions where $-0.3\text{ V} < V_{IN} < V_{IL}$.
3. IIH is the input leakage current per I/O pin over recommended operating conditions $V_{IH} < V_{IN} < V_{CCI}$. Input current is larger when operating outside recommended ranges.
4. Currents are measured at 85°C junction temperature.
5. All LVCMOS 3.3 V software macros support LVCMOS 3.3 V wide range as specified in the JESD8-B specification.
6. Software default selection highlighted in gray.

Table 2-55 • 3.3 V LVTTTL / 3.3 V LVCMOS Low Slew
Commercial-Case Conditions: $T_J = 70^\circ\text{C}$, Worst-Case VCC = 1.425 V, Worst-Case VCCI = 3.0 V
Applicable to Standard I/O Banks

| Revision | Changes | Page |
|-----------------------------|--|---------|
| Revision 11 (March 2012) | Note indicating that A3P015 is not recommended for new designs has been added. The " Devices Not Recommended For New Designs " section is new (SAR 36760). | I to IV |
| | The following sentence was removed from the Advanced Architecture section: "In addition, extensive on-chip programming circuitry allows for rapid, single-voltage (3.3 V) programming of IGLOO devices via an IEEE 1532 JTAG interface" (SAR 34687). | NA |
| | The reference to guidelines for global spines and VersaTile rows, given in the " Global Clock Contribution—PCLOCK " section, was corrected to the "Spine Architecture" section of the Global Resources chapter in the <i>ProASIC3 FPGA Fabric User's Guide</i> (SAR 34734). | 2-12 |
| | Figure 2-4 • Input Buffer Timing Model and Delays (Example) has been modified for the DIN waveform; the Rise and Fall time label has been changed to tDIN (35430). | 2-16 |
| | The AC Loading figures in the " Single-Ended I/O Characteristics " section were updated to match tables in the " Summary of I/O Timing Characteristics – Default I/O Software Settings " section (SAR 34883). | 2-32 |
| | Added values for minimum pulse width and removed the FRMAX row from Table 2-107 through Table 2-114 in the " Global Tree Timing Characteristics " section. Use the software to determine the FRMAX for the device you are using (SARs 37279, 29269). | 2-85 |
