Welcome to [E-XFL.COM](#)**Understanding Embedded - FPGAs (Field Programmable Gate Array)**

Embedded - FPGAs, or Field Programmable Gate Arrays, are advanced integrated circuits that offer unparalleled flexibility and performance for digital systems. Unlike traditional fixed-function logic devices, FPGAs can be programmed and reprogrammed to execute a wide array of logical operations, enabling customized functionality tailored to specific applications. This reprogrammability allows developers to iterate designs quickly and implement complex functions without the need for custom hardware.

Applications of Embedded - FPGAs

The versatility of Embedded - FPGAs makes them indispensable in numerous fields. In telecommunications.

By combining input blocks of the complementary PIOs and sharing some registers from output blocks, a gearbox function can be implemented, which takes a double data rate signal applied to PIOA and converts it as four data streams, IPOS0A, IPOS1A, IPOS0B and IPOS1B. Figure 2-29 shows the diagram using this gearbox function. For more information about this topic, please see information regarding additional documentation at the end of this data sheet.

The signal DDRCLKPOL controls the polarity of the clock used in the synchronization registers. It ensures adequate timing when data is transferred from the DQS to the system clock domain. For further information about this topic, see the DDR Memory section of this data sheet.

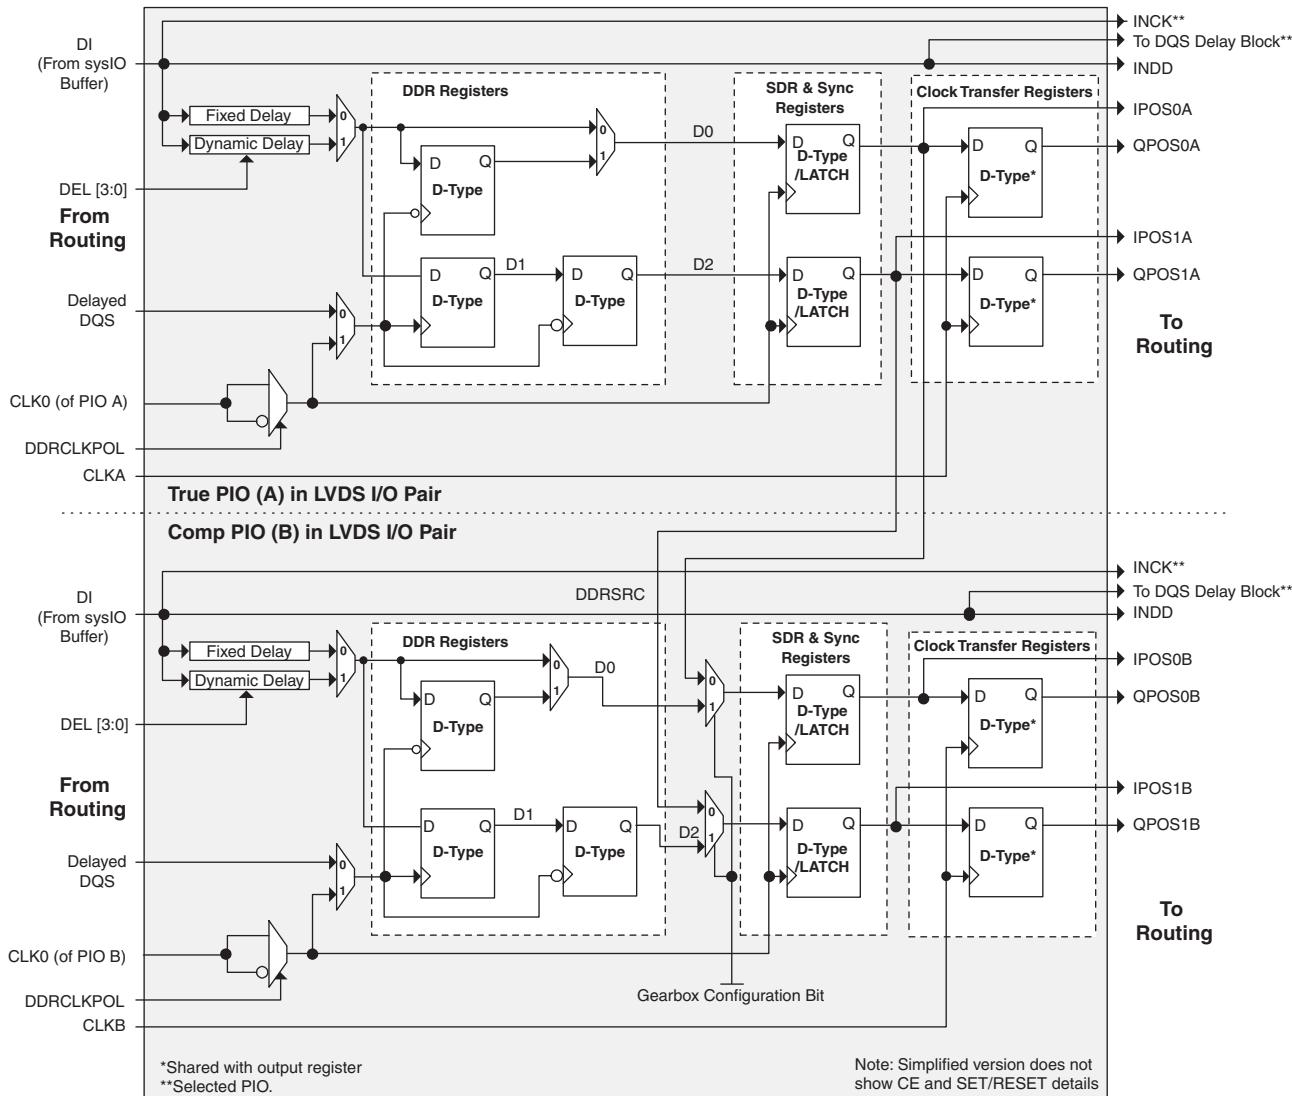

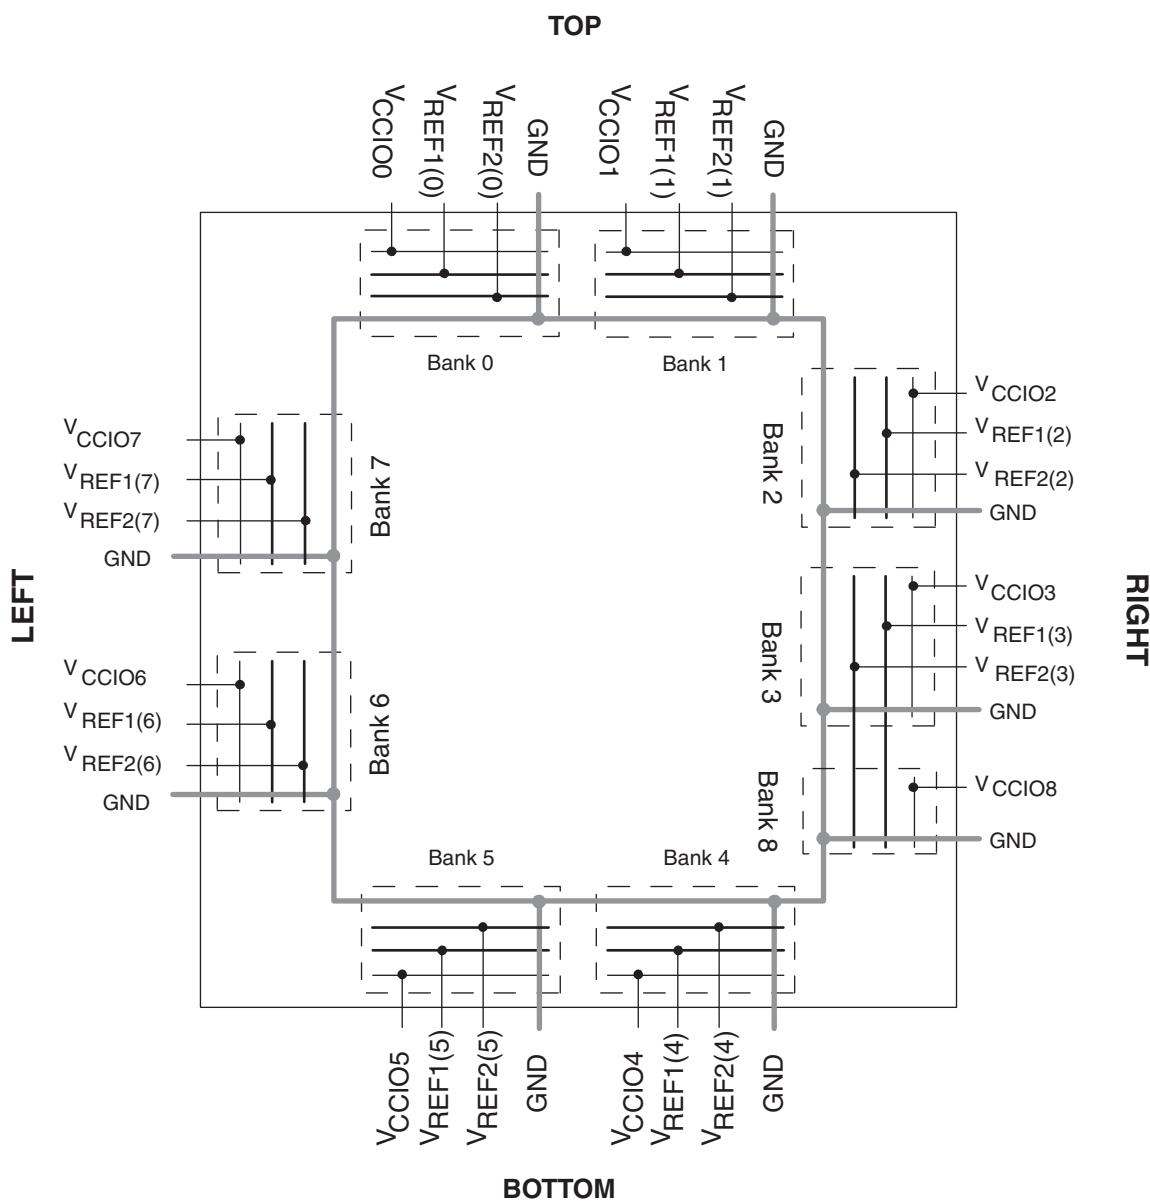

Figure 2-37. LatticeECP2 Banks

Symbol	Parameter	Min.	Max.	Units
V_{CCP} ⁶	PLL and Reference Clock Buffer Power	1.14	1.26	V

1. If V_{CCIO} or V_{CCJ} is set to 1.2V, they must be connected to the same power supply as V_{CC} . If V_{CCIO} or V_{CCJ} is set to 3.3V, they must be connected to the same power supply as V_{CCAUX} . V_{CCPLL} must be connected to the same power supply as V_{CC} through careful filtering and decoupling.
2. See recommended voltages by I/O standard in subsequent table.
3. V_{CCAUX} ramp rate must not exceed 30mV/ μ s during power-up when transitioning between 0V and 3.3V.
4. For proper power-up configuration, users must ensure that the configuration control signals such as the CFGx, INITN, PROGRAM and DONE pins are driven to the proper logic levels when the device powers up. The device power-up is triggered by the last of V_{CC} , V_{CCAUX} or V_{CCIO8} supplies that reaches its minimum valid levels. Alternatively, if the configuration control signals are pulled up by V_{CCIO8} , the V_{CCIO8} (configuration I/O bank) voltage must be powered up prior to or at the same time as the last of V_{CC} or V_{CCAUX} reaches its minimum levels.
5. For power-up, V_{CC} must reach its valid minimum value before powering up V_{CCAUX} (LatticeECP2/M "S" version devices only).
6. V_{CCRX} , V_{CCTX} and V_{CCP} must be tied together in each quad and all quads need to be powered up.
7. For more power supply design recommendations, refer to TN1114 [Electrical Recommendations for Lattice SERDES](#).

Hot Socketing Specifications^{1, 2, 3, 4}

I_{HDIN} ⁵	SERDES average input current when device is powered down and inputs are driven		—	—	4	mA

1. V_{CC} , V_{CCAUX} and V_{CCIO} should rise/fall monotonically. V_{CC} and V_{CCPLL} must be connected to the same power supply (applies to ECP2-6, ECP2-12 and ECP2-20 only).
2. $0 \leq V_{CC} \leq V_{CC}$ (MAX), $0 \leq V_{CCIO} \leq V_{CCIO}$ (MAX) or $0 \leq V_{CCAUX} \leq V_{CCAUX}$ (MAX).
3. I_{DK} is additive to I_{PU} , I_{PW} or I_{BH} .
4. LVCMOS and LVTTL only.
5. Assumes that the device is powered down with all supplies grounded, both P and N inputs driven by a CML driver with maximum allowed V_{CCIB} of 1.575V, 8b10b data and internal AC coupling.

Signal Descriptions

Signal Name	I/O	Description
General Purpose		
P[Edge] [Row/Column Number*][A/B]	I/O	<p>[Edge] indicates the edge of the device on which the pad is located. Valid edge designations are L (Left), B (Bottom), R (Right), T (Top).</p> <p>[Row/Column Number] indicates the PFU row or the column of the device on which the PIC exists. When Edge is T (Top) or B (Bottom), only need to specify Row Number. When Edge is L (Left) or R (Right), only need to specify Column Number.</p> <p>[A/B] indicates the PIO within the PIC to which the pad is connected. Some of these user-programmable pins are shared with special function pins. These pins, when not used as special purpose pins, can be programmed as I/Os for user logic. During configuration the user-programmable I/Os are tri-stated with an internal pull-up resistor enabled. See “Typical sysl/O I/O Behavior During Power-up” for more information about I/O behavior during power-up.</p>

** These dedicated input pins can be used for PLLs or GDLLs within the respective quadrant.

Note: VCCIO and GND pads are used to determine the average DC current drawn by I/Os between GND/VCCIO connections, or between the last GND/VCCIO in an I/O bank and the end of an I/O bank. The substrate pads listed in the Pin Table do not necessarily have a one to one connection with a package ball or pin.

* Supports true LVDS. Other differential signals must be emulated with external resistors.

** These dedicated input pins can be used for GPLLs or GDLLs within the respective quadrant.

***Due to packaging bond out option, this DQS does not have all the necessary DQ pins bonded out for a full 8-bit data width.

Note: VCCIO and GND pads are used to determine the average DC current drawn by I/Os between GND/VCCIO connections, or between the last GND/VCCIO in an I/O bank and the end of an I/O bank. The substrate pads listed in the Pin Table do not necessarily have a one to one connection with a package ball or pin.

LatticeECP2M Part Number Description

Ordering Information

Note: LatticeECP2M devices are dual marked. For example, the commercial speed grade LFE2M50E-7F672C is also marked with industrial grade -6I (LFE2M50E-6F672I). The commercial grade is one speed grade faster than the associated dual mark industrial grade. The slowest commercial grade does not have industrial markings. The markings appear as follows:

LatticeECP2M Standard Series Devices, Lead-Free Packaging
