Renesas Electronics America Inc - R5F213J6TNNP#50 Datasheet

Welcome to E-XFL.COM

What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Active
Core Processor	R8C
Core Size	16-Bit
Speed	20MHz
Connectivity	I²C, UART/USART
Peripherals	POR, PWM, Voltage Detect, WDT
Number of I/O	31
Program Memory Size	32KB (32K x 8)
Program Memory Type	FLASH
EEPROM Size	4K x 8
RAM Size	2.5K x 8
Voltage - Supply (Vcc/Vdd)	1.8V ~ 5.5V
Data Converters	A/D 12x10b
Oscillator Type	Internal
Operating Temperature	-20°C ~ 85°C (TA)
Mounting Type	Surface Mount
Package / Case	40-XFQFN Exposed Pad
Supplier Device Package	40-HXQFN (5x5)
Purchase URL	https://www.e-xfl.com/product-detail/renesas-electronics-america/r5f213j6tnnp-50

4. Special Function Registers (SFRs)

An SFR (special function register) is a control register for a peripheral function. Tables 4.1 to 4.12 list the special function registers. Table 4.13 lists the ID Code Areas and Option Function Select Area.

Table 4.1 SFR Information (1) (1)

Address	Register	Symbol	After Reset
0000h			
0001h			
0002h			
0003h			
0004h	Processor Mode Register 0	PM0	00h

X: Undefined

Notes:

1. The blank areas are reserved and cannot be accessed by users.
2. The CWR bit in the RSTFR register is set to 0 after power-on and voltage monitor 0 reset. Hardware reset, Software reset, or watchdog timer reset does not affect this bit.
3. The CSPROINI bit in the OFS register is set to 0.
4. The LVDAS bit in the OFS register is set to 1.
5. The LVDAS bit in the OFS register is set to 0.

:			
FFF7h	ID6		(Note 2)
:			
FFFBh	ID7		(Note 2)
:			
FFFFh	Option Function Select Register	OFS	(Note 1)

Notes:

1. The option function select area is allocated in the flash memory, not in the SFRs. Set appropriate values as ROM data by a program.
   Do not write additions to the option function select area. If the block including the option function select area is erased, the option function select area is set to FFh.
   When blank products are shipped, the option function select area is set to FFh. It is set to the written value after written by the user.
   When factory-programming products are shipped, the value of the option function select area is the value programmed by the user.
2. The ID code areas are allocated in the flash memory, not in the SFRs. Set appropriate values as ROM data by a program.
   Do not write additions to the ID code areas. If the block including the ID code areas is erased, the ID code areas are set to FFh.
   When blank products are shipped, the ID code areas are set to FFh. They are set to the written value after written by the user.
   When factory-programming products are shipped, the value of the ID code areas is the value programmed by the user.

Table 5.2 Recommended Operating Conditions

Symbol	Parameter				Conditions	Standard			Unit
						Min.	Typ.	Max.	
VCC/AVCC	Supply voltage					1.8	—	5.5	V
VSS/AVSS	Supply voltage					—	0	—	V
VIH	Input “H” voltage	Other than CMOS input				0.8 Vcc	—	Vcc	V
		CMOS input	Input level switching function (I/O port)	Input level selection : 0.35 Vcc	4.0 V ≤ Vcc ≤ 5.5 V	0.5 Vcc	—	Vcc	V
					2.7 V ≤ Vcc < 4.0 V	0.55 Vcc	—	Vcc	V
					1.8 V ≤ Vcc < 2.7 V	0.65 Vcc	—	Vcc	V
				Input level selection : 0.5 Vcc	4.0 V ≤ Vcc ≤ 5.5 V	0.65 Vcc	—	Vcc	V
					2.7 V ≤ Vcc < 4.0 V	0.7 Vcc	—	Vcc	V
					1.8 V ≤ Vcc < 2.7 V	0.8 Vcc	—	Vcc	V
				Input level selection : 0.7 Vcc	4.0 V ≤ Vcc ≤ 5.5 V	0.85 Vcc	—	Vcc	V
					2.7 V ≤ Vcc < 4.0 V	0.85 Vcc	—	Vcc	V
					1.8 V ≤ Vcc < 2.7 V	0.85 Vcc	—	Vcc	V
		External clock input (XOUT)				1.2	—	Vcc	V
VIL	Input “L” voltage	Other than CMOS input				0	—	0.2 Vcc	V
		CMOS input	Input level switching function (I/O port)	Input level selection : 0.35 Vcc	4.0 V ≤ Vcc ≤ 5.5 V	0	—	0.2 Vcc	V
					2.7 V ≤ Vcc < 4.0 V	0	—	0.2 Vcc	V
					1.8 V ≤ Vcc < 2.7 V	0	—	0.2 Vcc	V
				Input level selection : 0.5 Vcc	4.0 V ≤ Vcc ≤ 5.5 V	0	—	0.4 Vcc	V
					2.7 V ≤ Vcc < 4.0 V	0	—	0.3 Vcc	V
					1.8 V ≤ Vcc < 2.7 V	0	—	0.2 Vcc	V
				Input level selection : 0.7 Vcc	4.0 V ≤ Vcc ≤ 5.5 V	0	—	0.55 Vcc	V
					2.7 V ≤ Vcc < 4.0 V	0	—	0.45 Vcc	V
					1.8 V ≤ Vcc < 2.7 V	0	—	0.35 Vcc	V
		External clock input (XOUT)				0	—	0.4 Vcc	V
IOH(sum)	Peak sum output “H” current	Sum of all pins IOH(peak)				—	—	−160	mA
IOH(sum)	Average sum output “H” current	Sum of all pins IOH(avg)				—	—	−80	mA
IOH(peak)	Peak output “H” current	Drive capacity Low				—	—	−10	mA
		Drive capacity High				—	—	−40	mA
IOH(avg)	Average output “H” current	Drive capacity Low				—	—	−5	mA
		Drive capacity High				—	—	−20	mA
IOL(sum)	Peak sum output “L” current	Sum of all pins IOL(peak)				—	—	160	mA
IOL(sum)	Average sum output “L” current	Sum of all pins IOL(avg)				—	—	80	mA
IOL(peak)	Peak output “L” current	Drive capacity Low				—	—	10	mA
		Drive capacity High				—	—	40	mA
IOL(avg)	Average output “L” current	Drive capacity Low				—	—	5	mA
		Drive capacity High				—	—	20	mA
f(XIN)	XIN clock input oscillation frequency				2.7 V ≤ Vcc ≤ 5.5 V	—	—	20	MHz
					1.8 V ≤ Vcc < 2.7 V	—	—	5	MHz
fOCO40M	When used as the count source for timer RC (3)				2.7 V ≤ Vcc ≤ 5.5 V	32	—	40	MHz
fOCO-F	fOCO-F frequency				2.7 V ≤ Vcc ≤ 5.5 V	—	—	20	MHz
					1.8 V ≤ Vcc < 2.7 V	—	—	5	MHz
—	System clock frequency				2.7 V ≤ Vcc ≤ 5.5 V	—	—	20	MHz
					1.8 V ≤ Vcc < 2.7 V	—	—	5	MHz
f(BCLK)	CPU clock frequency				2.7 V ≤ Vcc ≤ 5.5 V	—	—	20	MHz
					1.8 V ≤ Vcc < 2.7 V	—	—	5	MHz

Notes:

1. Vcc = 1.8 V to 5.5 V at Topr = −20°C to 85°C (N version), unless otherwise specified.
2. The average output current indicates the average value of current measured during 100 ms.
3. fOCO40M can be used as the count source for timer RC in the range of Vcc = 2.7 V to 5.5 V.

Table 5.3 A/D Converter Characteristics

Symbol	Parameter		Conditions		Standard			Unit
					Min.	Typ.	Max.	
—	Resolution		Vref = AVcc		—	—	10	Bit
—	Absolute accuracy	10-bit mode	Vref = AVcc = 5.0 V	AN0 to AN7 input AN8 to AN11 input	—	—	±3	LSB
			Vref = AVcc = 3.3 V	AN0 to AN7 input AN8 to AN11 input	—	—	±5	LSB
			Vref = AVcc = 3.0 V	AN0 to AN7 input AN8 to AN11 input	—	—	±5	LSB
			Vref = AVcc = 2.2 V	AN0 to AN7 input AN8 to AN11 input	—	—	±5	LSB

V_{ref}	Reference voltage				2.2	—	AVcc	V
V_{IA}	Analog input voltage (3)				0	—	Vref	V
OCVREF	On-chip reference voltage		2 MHz ≤ φAD ≤ 4 MHz		1.19	1.34	1.49	V

Notes:

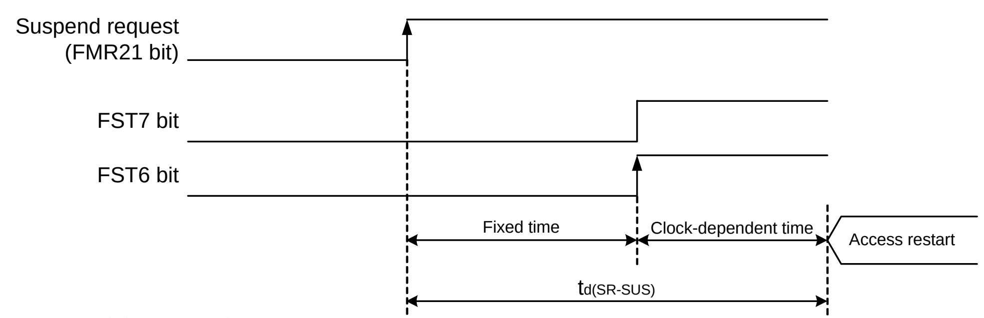
1. Vcc/AVcc = Vref = 2.2 V to 5.5 V, Vss = 0 V at Topr = −20°C to 85°C (N version), unless otherwise specified.
2. The A/D conversion result will be undefined in wait mode, stop mode, when the flash memory stops, and in low-current-consumption mode. Do not perform A/D conversion in these states or transition to these states during A/D conversion.
3. When the analog input voltage is over the reference voltage, the A/D conversion result will be 3FFh in 10-bit mode and FFh in 8-bit mode.

Table 5.5 Flash Memory (Data flash Block A to Block D) Electrical Characteristics

Symbol	Parameter	Conditions	Standard			Unit
			Min.	Typ.	Max.	
—	Program/erase endurance (2)		10,000 (3)	—	—	times
—	Byte program time (program/erase endurance ≤ 1,000 times)		—	160	1,500	µs
—	Byte program time (program/erase endurance > 1,000 times)		—	300	1,500	µs
—	Block erase time (program/erase endurance ≤ 1,000 times)		—	0.2	1	s
—	Block erase time (program/erase endurance > 1,000 times)		—	0.3	1	s
$t_{d(SR-SUS)}$	Time delay from suspend request until suspend		—	—	5 + CPU clock × 3 cycles	ms
—	Interval from erase start/restart until following suspend request		0	—	—	µs
—	Time from suspend until erase restart		—	—	30 + CPU clock × 1 cycle	µs
$t_{d(CMDRST-READY)}$	Time from when command is forcibly terminated until reading is enabled		—	—	30 + CPU clock × 1 cycle	µs
—	Program, erase voltage		2.7	—	5.5	V
—	Read voltage		1.8	—	5.5	V
—	Program, erase temperature		−20	—	85	°C
—	Data hold time (7)	Ambient temperature = 55°C	20	—	—	year

Notes:

1. Vcc = 2.7 V to 5.5 V at Topr = −20°C to 85°C (N version), unless otherwise specified.
2. Definition of programming/erasure endurance
   The programming and erasure endurance is defined on a per-block basis.
   If the programming and erasure endurance is n (n = 10,000), each block can be erased n times. For example, if 1,024 1-byte writes are performed to different addresses in block A, a 1 Kbyte block, and then the block is erased, the programming/erasure endurance still stands at one.
   However, the same address must not be programmed more than once per erase operation (overwriting prohibited).
3. Endurance to guarantee all electrical characteristics after program and erase. (1 to Min. value can be guaranteed).
4. In a system that executes multiple programming operations, the actual erasure count can be reduced by writing to sequential addresses in turn so that as much of the block as possible is used up before performing an erase operation. For example, when programming groups of 16 bytes, the effective number of rewrites can be minimized by programming up to 128 groups before erasing them all in one operation. In addition, averaging the erasure endurance between blocks A to D can further reduce the actual erasure endurance. It is also advisable to retain data on the erasure endurance of each block and limit the number of erase operations to a certain number.
5. If an error occurs during block erase, attempt to execute the clear status register command, then execute the block erase command at least three times until the erase error does not occur.
6. Customers desiring program/erase failure rate information should contact their Renesas technical support representative.
7. The data hold time includes time that the power supply is off or the clock is not supplied.



FST6, FST7: Bit in FST register
FMR21: Bit in FMR2 register

Figure 5.2 Time delay until Suspend

Table 5.8 Voltage Detection 2 Circuit Electrical Characteristics

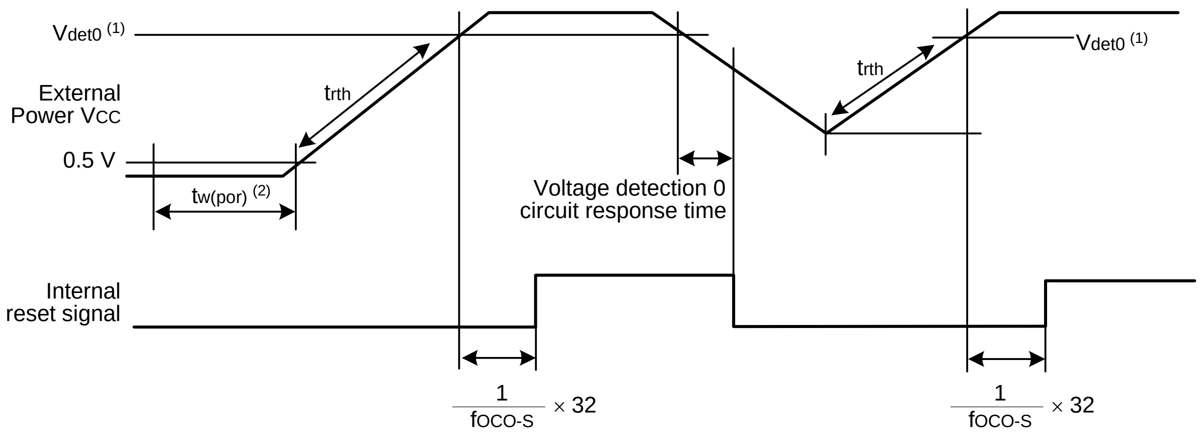
Symbol	Parameter	Condition	Standard			Unit
			Min.	Typ.	Max.	
V_{det2}	Voltage detection level Vdet2_0	At the falling of Vcc	3.70	4.00	4.30	V
—	Hysteresis width at the rising of Vcc in voltage detection 2 circuit		—	0.10	—	V
—	Voltage detection 2 circuit response time (2)	At the falling of Vcc from 5 V to (Vdet2_0 – 0.1) V	—	20	150	µs
—	Voltage detection circuit self power consumption	VCA27 = 1, Vcc = 5.0 V	—	1.7	—	µA
$t_{d(E-A)}$	Waiting time until voltage detection circuit operation starts (3)		—	—	100	µs

Notes:
1. The measurement condition is Vcc = 1.8 V to 5.5 V and Topr = –20°C to 85°C (N version).
2. Time until the voltage monitor 2 interrupt request is generated after the voltage passes V_{det2}.
3. Necessary time until the voltage detection circuit operates after setting to 1 again after setting the VCA27 bit in the VCA2 register to 0.

Table 5.9 Power-on Reset Circuit (2)

Symbol	Parameter	Condition	Standard			Unit
			Min.	Typ.	Max.	
t_{rth}	External power Vcc rise gradient	(Note 1)	0	—	50000	mV/msec

Notes:
1. The measurement condition is Topr = –20°C to 85°C (N version), unless otherwise specified.
2. To use the power-on reset function, enable voltage monitor 0 reset by setting the LVDAS bit in the OFS register to 0.



Notes:
1. V_{det0} indicates the voltage detection level of the voltage detection 0 circuit. Refer to **6. Voltage Detection Circuit** of User's Manual: Hardware for details.
2. $t_{w(por)}$ indicates the duration the external power V_{CC} must be held below the valid voltage (0.5 V) to enable a power-on reset. When turning on the power after it falls with voltage monitor 0 reset disabled, maintain $t_{w(por)}$ for 1 ms or more.

General Precautions in the Handling of MPU/MCU Products

The following usage notes are applicable to all MPU/MCU products from Renesas. For detailed usage notes on the products covered by this manual, refer to the relevant sections of the manual. If the descriptions under General Precautions in the Handling of MPU/MCU Products and in the body of the manual differ from each other, the description in the body of the manual takes precedence.

1. Handling of Unused Pins

   Handle unused pins in accord with the directions given under Handling of Unused Pins in the manual.

   — The input pins of CMOS products are generally in the high-impedance state. In operation with an unused pin in the open-circuit state, extra electromagnetic noise is induced in the vicinity of LSI, an associated shoot-through current flows internally, and malfunctions occur due to the false recognition of the pin state as an input signal become possible. Unused pins should be handled as described under Handling of Unused Pins in the manual.

2. Processing at Power-on

   The state of the product is undefined at the moment when power is supplied.

   — The states of internal circuits in the LSI are indeterminate and the states of register settings and pins are undefined at the moment when power is supplied.

   In a finished product where the reset signal is applied to the external reset pin, the states of pins are not guaranteed from the moment when power is supplied until the reset process is completed.

   In a similar way, the states of pins in a product that is reset by an on-chip power-on reset function are not guaranteed from the moment when power is supplied until the power reaches the level at which resetting has been specified.

3. Prohibition of Access to Reserved Addresses

   Access to reserved addresses is prohibited.

   — The reserved addresses are provided for the possible future expansion of functions. Do not access these addresses; the correct operation of LSI is not guaranteed if they are accessed.

4. Clock Signals

   After applying a reset, only release the reset line after the operating clock signal has become stable. When switching the clock signal during program execution, wait until the target clock signal has stabilized.

   — When the clock signal is generated with an external resonator (or from an external oscillator) during a reset, ensure that the reset line is only released after full stabilization of the clock signal. Moreover, when switching to a clock signal produced with an external resonator (or by an external oscillator) while program execution is in progress, wait until the target clock signal is stable.

5. Differences between Products

   Before changing from one product to another, i.e. to one with a different part number, confirm that the change will not lead to problems.

   — The characteristics of MPU/MCU in the same group but having different part numbers may differ because of the differences in internal memory capacity and layout pattern. When changing to products of different part numbers, implement a system-evaluation test for each of the products.

Notice

1. All information included in this document is current as of the date this document is issued. Such information, however, is subject to change without any prior notice. Before purchasing or using any Renesas Electronics products listed herein, please confirm the latest product information with a Renesas Electronics sales office. Also, please pay regular and careful attention to additional and different information to be disclosed by Renesas Electronics such as that disclosed through our website.
2. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
3. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part.
4. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
5. When exporting the products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations. You should not use Renesas Electronics products or the technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations.
6. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
7. Renesas Electronics products are classified according to the following three quality grades: "Standard", "High Quality", and "Specific". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below. You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application categorized as "Specific" without the prior written consent of Renesas Electronics. Further, you may not use any Renesas Electronics product for any application for which it is not intended without the prior written consent of Renesas Electronics. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for an application categorized as "Specific" or for which the product is not intended where you have failed to obtain the prior written consent of Renesas Electronics. The quality grade of each Renesas Electronics product is "Standard" unless otherwise expressly specified in a Renesas Electronics data sheets or data books, etc.

"Standard":	Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots.
"High Quality":	Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; safety equipment; and medical equipment not specifically designed for life support.
"Specific":	Aircraft; aerospace equipment; submersible repeaters; nuclear reactor control systems; medical equipment or systems for life support (e.g. artificial life support devices or systems), surgical implantations, or healthcare intervention (e.g. excision, etc.), and any other applications or purposes that pose a direct threat to human life.

8. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
9. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or system manufactured by you.
10. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
11. This document may not be reproduced or duplicated, in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.
