

Welcome to [E-XFL.COM](https://www.e-xfl.com)

### What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

### Applications of "[Embedded - Microcontrollers](#)"

#### Details

|                            |   |
|----------------------------|---|
| Product Status             | Active  |
| Core Processor             | RX  |
| Core Size                  | 32-Bit Single-Core  |
| Speed                      | 32MHz   |
| Connectivity               | I <sup>2</sup> C, IrDA, SCI, SPI, SSI, USB OTG  |
| Peripherals                | DMA, LCD, LVD, POR, PWM, WDT  |
| Number of I/O              | 44  |
| Program Memory Size        | 256KB (256K x 8)  |
| Program Memory Type        | FLASH   |
| EEPROM Size                | 8K x 8  |
| RAM Size                   | 32K x 8   |
| Voltage - Supply (Vcc/Vdd) | 1.8V ~ 3.6V   |
| Data Converters            | A/D 11x12b; D/A 2x12b   |
| Oscillator Type            | Internal  |
| Operating Temperature      | -40°C ~ 85°C (TA)   |
| Mounting Type              | Surface Mount   |
| Package / Case             | 64-LQFP   |
| Supplier Device Package    | 64-LFQFP (10x10)  |

# 1. Overview

## 1.1 Outline of Specifications

Table 1.1 lists the specifications, and Table 1.2 gives a comparison of the functions of the products in different packages.

Table 1.1 is for products with the greatest number of functions, so the number of peripheral modules and channels will differ in accordance with the package type. For details, see Table 1.2, Comparison of Functions for Different Packages.

**Table 1.1 Outline of Specifications (1/3)**

| Classification        | Module/Function                                | Description   |
|-----------------------|--|---|
| CPU                   | CPU  | <ul style="list-style-type: none"> <li>Maximum operating frequency: 32 MHz</li> <li>32-bit RX CPU</li> <li>Minimum instruction execution time: One instruction per clock cycle</li> <li>Address space: 4-Gbyte linear</li> <li>Register set               <ul style="list-style-type: none"> <li>General purpose: Sixteen 32-bit registers</li> <li>Control: Eight 32-bit registers</li> <li>Accumulator: One 64-bit register</li> </ul> </li> <li>Basic instructions: 73</li> <li>DSP instructions: 9</li> <li>Addressing modes: 10</li> <li>Data arrangement               <ul style="list-style-type: none"> <li>Instructions: Little endian</li> <li>Data: Selectable as little endian or big endian</li> </ul> </li> <li>On-chip 32-bit multiplier: 32-bit × 32-bit → 64-bit</li> <li>On-chip divider: 32-bit ÷ 32-bit → 32 bits</li> <li>Barrel shifter: 32 bits</li> </ul>   |
| Memory                | ROM  | <ul style="list-style-type: none"> <li>Capacity: 128 K /256 K /384 K /512 Kbytes</li> <li>32 MHz, no-wait memory access</li> <li>Programming/erasing method:               <ul style="list-style-type: none"> <li>Serial programming (asynchronous serial communication/USB communication), self-programming</li> </ul> </li> </ul>   |
|                       | RAM  | <ul style="list-style-type: none"> <li>Capacity: 32 K /64 Kbytes</li> <li>32 MHz, no-wait memory access</li> </ul>  |
|                       | E2 DataFlash                                   | <ul style="list-style-type: none"> <li>Capacity: 8 Kbytes</li> <li>Number of erase/write cycles: 1,000,000 (typ)</li> </ul>   |
| MCU operating mode    |  | Single-chip mode  |
| Clock                 | Clock generation circuit                       | <ul style="list-style-type: none"> <li>Main clock oscillator, sub-clock oscillator, low-speed on-chip oscillator, high-speed on-chip oscillator, PLL frequency synthesizer, USB-dedicated PLL frequency synthesizer, and IWDTP-dedicated on-chip oscillator</li> <li>Oscillation stop detection: Available</li> <li>Clock frequency accuracy measurement circuit (CAC)</li> <li>Independent settings for the system clock (ICLK), peripheral module clock (PCLK), and FlashIF clock (FCLK)               <ul style="list-style-type: none"> <li>The CPU and system sections such as other bus masters run in synchronization with the system clock (ICLK): 32 MHz (at max.)</li> <li>Peripheral modules run in synchronization with the PCLK: 32 MHz (at max.)</li> <li>The flash peripheral circuit runs in synchronization with the FCLK: 32 MHz (at max.)</li> </ul> </li> <li>The ICLK frequency can only be set to FCLK, PCLKB, or PCLKD multiplied by n (n: 1, 2, 4, 8, 16, 32, 64).</li> </ul> |
| Resets                |  | RES# pin reset, power-on reset, voltage monitoring reset, independent watchdog timer reset, and software reset  |
| Voltage detection     | Voltage detection circuit (LVDAa)              | <ul style="list-style-type: none"> <li>When the voltage on VCC falls below the voltage detection level, an internal reset or internal interrupt is generated.</li> <li>Voltage detection circuit 1 is capable of selecting the detection voltage from 10 levels</li> <li>Voltage detection circuit 2 is capable of selecting the detection voltage from 4 levels</li> </ul>   |
| Low power consumption | Low power consumption functions                | <ul style="list-style-type: none"> <li>Module stop function</li> <li>Three low power consumption modes               <ul style="list-style-type: none"> <li>Sleep mode, deep sleep mode, and software standby mode</li> </ul> </li> </ul>   |
|                       | Function for lower operating power consumption | <ul style="list-style-type: none"> <li>Operating power control modes               <ul style="list-style-type: none"> <li>High-speed operating mode, middle-speed operating mode, and low-speed operating mode</li> </ul> </li> </ul>   |
| Interrupt             | Interrupt controller (ICUb)                    | <ul style="list-style-type: none"> <li>Interrupt vectors: 120</li> <li>External interrupts: 9 (NMI, IRQ0 to IRQ7 pins)</li> <li>Non-maskable interrupts: 4 (NMI pin, voltage monitoring 1 interrupt, voltage monitoring 2 interrupt, and IWDTP interrupt)</li> <li>16 levels specifiable for the order of priority</li> </ul>   |

### 1.5 Pin Assignments

Figure 1.3 to Figure 1.5 show the pin assignments. Table 1.5 to Table 1.7 show the lists of pins and pin functions.

Figure 1.3 Pin Assignments of the 100-Pin LFQFP

**Table 1.5 List of Pins and Pin Functions (100-Pin LQFP) (2/3)**

| Pin No. | Power Supply, Clock, System Control | I/O Port | Timers (MTU, POE, RTC, TMR)        | Communication (SCIE, SCIF, RSPI, RIIC, USB, SSI)       | LCD, Touch | Others       |
|---------|-------------------------------------|----------|------------------------------------|--|------------|--------------|
| 36      |                                     | P11      | MTIC5U/POE0#                       | RXD12/RXD12/SMISO12/SSCL12/ RXD0/SMISO0/SSCL0          | SEG02      | IRQ7         |
| 37      |                                     | P10      | MTIC5V/POE1#                       | TXD12/TXD12/SIOX12/SMOSI12/SSDA12/TXD0/SMOSI0/SSDA0    | SEG03      | IRQ6         |
| 38      |                                     | P56      | MTIOC1A/MTIC5W/POE2#               | TXD1/SMOSI1/SSDA1                                      | SEG04      | IRQ5         |

## 2.1 General-Purpose Registers (R0 to R15)

This CPU has 16 general-purpose registers (R0 to R15). R0 to R15 can be used as data registers or address registers. R0, a general-purpose register, also functions as the stack pointer (SP). The stack pointer is switched to operate as the interrupt stack pointer (ISP) or user stack pointer (USP) by the value of the stack pointer select bit (U) in the processor status word (PSW).

## 2.2 Control Registers

### (1) Interrupt Stack Pointer (ISP)/User Stack Pointer (USP)

The stack pointer (SP) can be either of two types, the interrupt stack pointer (ISP) or the user stack pointer (USP). Whether the stack pointer operates as the ISP or USP depends on the value of the stack pointer select bit (U) in the processor status word (PSW).

Set the ISP or USP to a multiple of 4, as this reduces the numbers of cycles required to execute interrupt sequences and instructions entailing stack manipulation.

### (2) Interrupt Table Register (INTB)

The interrupt table register (INTB) specifies the address where the relocatable vector table starts.

### (3) Program Counter (PC)

The program counter (PC) indicates the address of the instruction being executed.

### (4) Processor Status Word (PSW)

The processor status word (PSW) indicates the results of instruction execution or the state of the CPU.

### (5) Backup PC (BPC)

The backup PC (BPC) is provided to speed up response to interrupts.

After a fast interrupt has been generated, the contents of the program counter (PC) are saved in the BPC register.

### (6) Backup PSW (BPSW)

The backup PSW (BPSW) is provided to speed up response to interrupts.

After a fast interrupt has been generated, the contents of the processor status word (PSW) are saved in the BPSW. The allocation of bits in the BPSW corresponds to that in the PSW.

### (7) Fast Interrupt Vector Register (FINTV)

The fast interrupt vector register (FINTV) is provided to speed up response to interrupts.

The FINTV register specifies a branch destination address when a fast interrupt has been generated.

## 2.3 Register Associated with DSP Instructions

### (1) Accumulator (ACC)

The accumulator (ACC) is a 64-bit register used for DSP instructions. The accumulator is also used for the multiply and multiply-and-accumulate instructions; EMUL, EMULU, MUL, and RMPA, in which case the prior value in the accumulator is modified by execution of the instruction.

Use the MVTACHI and MVTACLO instructions for writing to the accumulator. The MVTACHI and MVTACLO instructions write data to the higher-order 32 bits (bits 63 to 32) and the lower-order 32 bits (bits 31 to 0), respectively.

Use the MVFACHI and MVFACMI instructions for reading data from the accumulator. The MVFACHI and MVFACMI instructions read data from the higher-order 32 bits (bits 63 to 32) and the middle 32 bits (bits 47 to 16), respectively.

## 4. I/O Registers

This section provides information on the on-chip I/O register addresses and bit configuration. The information is given as shown below. Notes on writing to I/O registers are also given below.

### (1) I/O register addresses (address order)

- Registers are listed from the lower allocation addresses.
- Registers are classified according to module symbols.
- Numbers of cycles for access indicate numbers of cycles of the given base clock.
- Among the internal I/O register area, addresses not listed in the list of registers are reserved. Reserved addresses must not be accessed. Do not access these addresses; otherwise, the operation when accessing these bits and subsequent operations cannot be guaranteed.

### (2) Notes on writing to I/O registers

While writing to an I/O register, the CPU starts executing subsequent instructions before the I/O register write access is completed. This may cause the subsequent instructions to be executed before the write value is reflected in the operation. The examples below show how subsequent instructions must be executed after a write access to an I/O register is completed.

#### [Examples of cases requiring special care]

- The subsequent instruction must be executed while an interrupt request is disabled with the IENj bit in IERn of the ICU (interrupt request enable bit) set to 0.
- A WAIT instruction is executed immediately after the preprocessing for causing a transition to the low power consumption state.

In the above cases, after writing to an I/O register, wait until the write operation is completed using the following procedure and then execute the subsequent instruction.

- Write to an I/O register.
- Read the value in the I/O register and write it to a general register.
- Execute the operation using the value read.
- Execute the subsequent instruction.

#### Example of instructions

- Byte-size I/O registers

```
MOV.L #SFR_ADDR, R1
MOV.B #SFR_DATA, [R1]
CMP [R1].UB, R1
;; Next process
```

- Word-size I/O registers

```
MOV.L #SFR_ADDR, R1
MOV.W #SFR_DATA, [R1]
CMP [R1].W, R1
;; Next process
```

**Table 4.1 List of I/O Registers (Address Order) (4/23)**

| Address    | Module Symbol | Register Name                      | Register Symbol | Number of Bits | Access Size | Number of Access States |
|------------|---------------|------------------------------------|-----------------|----------------|-------------|-------------------------|
| 0008 70E4h | ICU           | Interrupt Request Register 228     | IR228           | 8              | 8           | 2 ICLK                  |
| 0008 70E5h | ICU           | Interrupt Request Register 229     | IR229           | 8              | 8           | 2 ICLK                  |
| 0008 70E6h | ICU           | Interrupt Request Register 230     | IR230           | 8              | 8           | 2 ICLK                  |
| 0008 70E7h | ICU           | Interrupt Request Register 231     | IR231           | 8              | 8           | 2 ICLK                  |
| 0008 70E8h | ICU           | Interrupt Request Register 232     | IR232           | 8              | 8           | 2 ICLK                  |
| 0008 70E9h | ICU           | Interrupt Request Register 233     | IR233           | 8              | 8           | 2 ICLK                  |

| Analog power supply voltages | AVCC0 <sup>*1 to *3</sup> |                   | 1.8  | —    | 3.6   | V    |
|                              | AVSS0                     |                   | —    | 0    | —     |      |
|                              | VREFH0                    |                   | 1.8  | —    | AVCC0 |      |
|                              | VREFL0                    |                   | —    | 0    | —     |      |
|                              | VREFH                     |                   | 1.8  | —    | AVCC0 |      |
|                              | VREFL                     |                   | —    | 0    | —     |      |

Note 1. AVCC0 and VCC can be set individually within the operating range, but there are the following restrictions for the voltage applied to the PJ0 and PJ2 pins, VCC, and AVCC0.

When 12-bit D/A converter used: Voltage applied to port J0 and J2 pins (D/A output voltage)  $\leq$  VCC

When general ports selected: VCC  $\leq$  AVCC0

Note 2. For details, refer to section 36.8.11, Voltage Range of Analog Power Supply Pins in the User's Manual: Hardware.

Note 3. Sequence of Powering on AVCC0 and VCC

When powering on AVCC0 and VCC, power them on at the same time or VCC first.

**Table 5.7 DC Characteristics (5) (2/2)**Conditions:  $1.8\text{ V} \leq VCC = VCC\_USB \leq 3.6\text{ V}$ ,  $1.8\text{ V} \leq AVCC0 \leq 3.6\text{ V}$ ,  $VSS = AVSS0 = VSS\_USB = 0\text{ V}$ ,  $T_a = -40\text{ to }+105^\circ\text{C}$

|                     |                                |                             | All peripheral operation:<br>Normal*9      | ICLK = 32.768 kHz |                 | 7.0       | —   |      |                    |

Note 1. Supply current values do not include output charge/discharge current from all pins. The values apply when internal pull-up MOSs are in the off state.

Note 2. Clock supply to the peripheral functions is stopped. This does not include BGO operation. The clock source is PLL. FCLK and PCLK are set to divided by 64.

Note 3. Clocks are supplied to the peripheral functions. This does not include BGO operation. The clock source is PLL. FCLK and PCLK are set to the same frequency as ICLK.

Note 4. Values when  $VCC = 3.3\text{ V}$ .

Note 5. This is the increase for programming or erasure of the ROM or E2 DataFlash during program execution.

Note 6. Clock supply to the peripheral functions is stopped. The clock source is PLL when ICLK = 12 MHz, and HOCO otherwise. FCLK and PCLK are set to divided by 64.

Note 7. Clocks are supplied to the peripheral functions. The clock source is PLL when ICLK = 12 MHz, and HOCO otherwise. FCLK and PCLK are set to the same frequency as ICLK.

Note 8. Clock supply to the peripheral functions is stopped. The clock source is the sub-clock oscillator. FCLK and PCLK are set to divided by 64.

Note 9. Clocks are supplied to the peripheral functions. The clock source is the sub-clock oscillator. FCLK and PCLK are set to the same frequency as ICLK.

Note 10. Values when the MSTPCRA.MSTPA17 bit (12-bit A/D converter module stop bit) is set to "transition to the module stop state is made".

**Table 5.17 Output Values of Voltage (1)**Conditions:  $2.7\text{ V} \leq VCC = VCC\_USB \leq 3.6\text{ V}$ ,  $2.7\text{ V} \leq AVCC0 \leq 3.6\text{ V}$ ,  $VSS = AVSS0 = VSS\_USB = 0\text{ V}$ ,  $T_a = -40\text{ to }+105^\circ\text{C}$

Note: Does not include the time until each operation of the flash memory is started after instructions are executed by software.

Note: The lower-limit frequency of FCLK is 1 MHz during programming or erasing of the flash memory. When using FCLK at below 4 MHz, the frequency can be set to 1 MHz, 2 MHz, or 3 MHz. A non-integer frequency such as 1.5 MHz cannot be set.

Note: The frequency accuracy of FCLK should be  $\pm 3.5\%$ . Confirm the frequency accuracy of the clock source.

## Appendix 1. Package Dimensions

Information on the latest version of the package dimensions or mountings has been displayed in “Packages” on Renesas Electronics Corporation website.

## Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
3. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from such alteration, modification, copy or otherwise misappropriation of Renesas Electronics product.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.  
"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots etc.  
"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anti-crime systems; and safety equipment etc.  
Renesas Electronics products are neither intended nor authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems, surgical implantations etc.), or may cause serious property damages (nuclear reactor control systems, military equipment etc.). You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application for which it is not intended. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for which the product is not intended by Renesas Electronics.
6. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You should not use Renesas Electronics products or technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. When exporting the Renesas Electronics products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, who distributes, disposes of, or otherwise places the product with a third party, to notify such third party in advance of the contents and conditions set forth in this document, Renesas Electronics assumes no responsibility for any losses incurred by you or third parties as a result of unauthorized use of Renesas Electronics products.
11. This document may not be reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority-owned subsidiaries.

(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

### SALES OFFICES

Renesas Electronics Corporation
