What is "Embedded - Microcontrollers"?

"Embedded - Microcontrollers" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "Embedded - Microcontrollers"

Details	
Product Status	Not For New Designs
Core Processor	STM8A
Core Size	8-Bit
Speed	24MHz
Connectivity	CANbus, I²C, LINbus, SPI, UART/USART
Peripherals	Brown-out Detect/Reset, POR, PWM, WDT
Number of I/O	52
Program Memory Size	64KB (64K x 8)
Program Memory Type	FLASH
EEPROM Size	2K x 8
RAM Size	6K x 8
Voltage - Supply (Vcc/Vdd)	3V ~ 5.5V
Data Converters	A/D 16x10b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 125°C (TA)
Mounting Type	Surface Mount
Package / Case	64-LQFP

2 Description

The STM8AF526x/8x/Ax and STM8AF6269/8x/Ax automotive 8-bit microcontrollers described in this datasheet offer from 32 Kbyte to 128 Kbyte of non volatile memory and integrated true data EEPROM. They are referred to as high density STM8A devices in STM8S series and STM8AF series 8-bit microcontrollers reference manual (RM0016).

The STM8AF52 series features a CAN interface.

All devices of the STM8A product line provide the following benefits: reduced system cost, performance and robustness, short development cycles, and product longevity.

The system cost is reduced thanks to an integrated true data EEPROM for up to 300 k write/erase cycles and a high system integration level with internal clock oscillators, wtachdog, and brown-out reset.

Device performance is ensured by 20 MIPS at 24 MHz CPU clock frequency and enhanced characteristics which include robust I/O, independent watchdogs (with a separate clock source), and a clock security system.

Short development cycles are guaranteed due to application scalability across a common family product architecture with compatible pinout, memory map, and modular peripherals. Full documentation is offered with a wide choice of development tools.

Product longevity is ensured in the STM8A family thanks to their advanced core which is made in a state-of-the art technology for automotive applications with 3.3 V to 5.5 V operating supply.

All STM8A and ST7 microcontrollers are supported by the same tools including STVD/STVP development environment, the STice emulator and a low-cost, third party in-circuit debugging tool.

The ROP circuit may provide a temporary access for debugging or failure analysis. The temporary read access is protected by a user defined, 8-byte keyword stored in the option byte area. This keyword must be entered via the SWIM interface to temporarily unlock the device.

If desired, the temporary unlock mechanism can be permanently disabled by the user through OPT6/NOPT6 option bytes.

5.5 Clock controller

The clock controller distributes the system clock coming from different oscillators to the core and the peripherals. It also manages clock gating for low-power modes and ensures clock robustness.

5.5.1 Features

- **Clock sources**
  - 16 MHz high-speed internal RC oscillator (HSI)
  - 128 kHz low-speed internal RC (LSI)
  - 1-24 MHz high-speed external crystal (HSE)
  - Up to 24 MHz high-speed user-external clock (HSE user-ext)
- **Reset**: After reset the microcontroller restarts by default with an internal 2-MHz clock (16 MHz/8). The clock source and speed can be changed by the application program as soon as the code execution starts.
- **Safe clock switching**: Clock sources can be changed safely on the fly in Run mode through a configuration register. The clock signal is not switched until the new clock source is ready. The design guarantees glitch-free switching.
- **Clock management**: To reduce power consumption, the clock controller can stop the clock to the core, individual peripherals or memory.
- **Wakeup**: In case the device wakes up from low-power modes, the internal RC oscillator (16 MHz/8) is used for quick startup. After a stabilization time, the device switches to the clock source that was selected before Halt mode was entered.
- **Clock security system (CSS)**: The CSS permits monitoring of external clock sources and automatic switching to the internal RC (16 MHz/8) in case of a clock failure.
- **Configurable main clock output (CCO)**: This feature permits to output a clock signal for use by the application.

5.5.2 16 MHz high-speed internal RC oscillator (HSI)

- Default clock after reset 2 MHz (16 MHz/8)
- Fast wakeup time

User trimming

The register CLK_HSITRIMR with two trimming bits plus one additional bit for the sign permits frequency tuning by the application program. The adjustment range covers all possible frequency variations versus supply voltage and temperature. This trimming does not change the initial production setting.

5.8 Analog to digital converter (ADC)

The STM8A products described in this datasheet contain a 10-bit successive approximation ADC with up to 16 multiplexed input channels, depending on the package.

The ADC name differs between the datasheet and the STM8A/S reference manual (see *Table 8*).

Table 8. ADC naming

Peripheral name in datasheet	Peripheral name in reference manual (RM0016)
ADC	ADC2

ADC features

- 10-bit resolution
- Single and continuous conversion modes
- Programmable prescaler: f_{MASTER} divided by 2 to 18
- Conversion trigger on timer events, and external events
- Interrupt generation at end of conversion
- Selectable alignment of 10-bit data in 2 x 8 bit result registers
- Shadow registers for data consistency
- ADC input range: $V_{SSA} \leq V_{IN} \leq V_{DDA}$
- Schmitt-trigger on analog inputs can be disabled to reduce power consumption

5.9 Communication interfaces

The following sections give a brief overview of the communication peripheral. Some peripheral names differ between the datasheet and STM8S series and STM8AF series 8-bit microcontrollers reference manual (see *Table 9*).

Table 9. Communication peripheral naming correspondence

Peripheral name in datasheet	Peripheral name in reference manual (RM0016)
USART	UART1
LINUART	UART3

5.9.1 Universal synchronous/asynchronous receiver transmitter (USART)

The devices covered by this datasheet contain one USART interface. The USART can operate in standard SCI mode (serial communication interface, asynchronous) or in SPI emulation mode. It is equipped with a 16 bit fractional prescaler. It features LIN master support.

10 Electrical characteristics

10.1 Parameter conditions

Unless otherwise specified, all voltages are referred to V_{SS}.

10.1.1 Minimum and maximum values

Unless otherwise specified the minimum and maximum values are guaranteed in the worst conditions of ambient temperature, supply voltage and frequencies by tests in production on 100% of the devices with an ambient temperature at T_A = -40 °C, T_A = 25 °C, and $T_A = T_{Amax}$ (given by the selected temperature range).

Data based on characterization results, design simulation and/or technology characteristics are indicated in the table footnotes and are not tested in production.

10.1.2 Typical values

Unless otherwise specified, typical data are based on T_A = 25 °C, V_{DD} = 5.0 V. They are given only as design guidelines and are not tested.

Typical ADC accuracy values are determined by characterization of a batch of samples from a standard diffusion lot over the full temperature range.

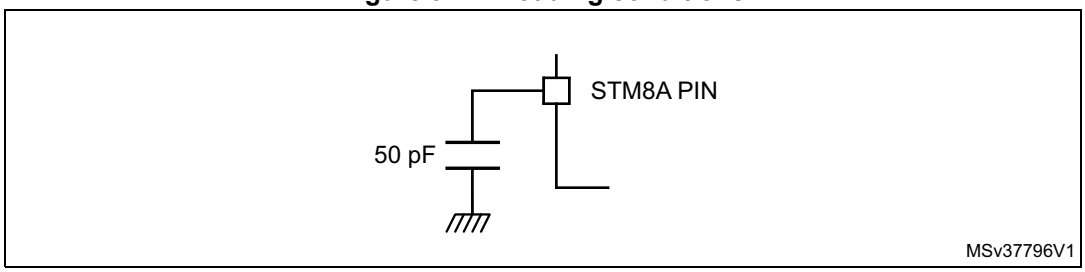
10.1.3 Typical curves

Unless otherwise specified, all typical curves are given only as design guidelines and are not tested.

10.1.4 Loading capacitor

The loading conditions used for pin parameter measurement are shown in *Figure 9*.

Figure 9. Pin loading conditions



10.3 Operating conditions

Table 24. General operating conditions

1. Care should be taken when selecting the capacitor, due to its tolerance, as well as the parameter dependency on temperature, DC bias and frequency in addition to other factors. The parameter maximum value must be respected for the full application range.
2. This frequency of 1 MHz as a condition for V_{CAP} parameters is given by design of internal regulator.

13 STM8 development tools

Development tools for the STM8A microcontrollers include the

- STice emulation system offering tracing and code profiling
- STVD high-level language debugger including assembler and visual development environment - seamless integration of third party C compilers
- STVP Flash programming software

In addition, the STM8A comes with starter kits, evaluation boards and low-cost in-circuit debugging/programming tools.

13.1 Emulation and in-circuit debugging tools

The STM8 tool line includes the STice emulation system offering a complete range of emulation and in-circuit debugging features on a platform that is designed for versatility and cost-effectiveness. In addition, STM8A application development is supported by a low-cost in-circuit debugger/programmer.

The STice is the fourth generation of full-featured emulators from STMicroelectronics. It offers new advanced debugging capabilities including tracing, profiling and code coverage analysis to help detect execution bottlenecks and dead code.

In addition, STice offers in-circuit debugging and programming of STM8A microcontrollers via the STM8 single wire interface module (SWIM), which allows non-intrusive debugging of an application while it runs on the target microcontroller.

For improved cost effectiveness, STice is based on a modular design that allows users to order exactly what they need to meet their development requirements and to adapt their emulation system to support existing and future ST microcontrollers.

13.1.1 STice key features

- Program and data trace recording up to 128 K records
- Advanced breakpoints with up to 4 levels of conditions
- Data breakpoints
- Real-time read/write of all device resources during emulation
- Occurrence and time profiling and code coverage analysis (new features)
- In-circuit debugging/programming via SWIM protocol
- 8-bit probe analyzer
- 1 input and 2 output triggers
- USB 2.0 high-speed interface to host PC
- Power supply follower managing application voltages between 1.62 to 5.5 V
- Modularity that allows users to specify the components they need to meet their development requirements and adapt to future requirements
- Supported by free software tools that include integrated development environment (IDE), programming software interface and assembler for STM8.

Updated *Table 43: ADC characteristics.* Updated *Figure 43: Typical application with ADC.* Removed *Table: ADC accuracy for VDDA = 3.3 V.* Updated *Table 44: ADC accuracy for VDDA = 5 V.* Updated *Table 46: EMI data.* Updated *Table 48: Electrical sensitivities.* Added text about Ecopack in the *Section 11: Package information.* *Figure 48: LQFP64 - 64-pin, 10 x 10 mm low-profile quad flat package outline:* deleted footnote. Updated *Figure 60: STM8AF526x/8x/Ax and STM8AF6269/8x/Ax ordering information scheme1*. Added *Section 13: STM8 development tools.*
22-Oct-2009	5	Updated *Table 1: Device summary*: added STM8AF5178, STM8AF519A and STM8AF619A.

Table 55. Document revision history (continued)

Date	Revision	Changes
13-Oct-2016	14	Updated: – Title of *Figure 7: STM8AF52x6 VFQFPN32 32-pin pinout*, (previously STM8AF5286UC VFQFPN32 32-pin pinout) – Footnotes of *Figure 60: STM8AF526x/8x/Ax and STM8AF6269/8x/Ax ordering information scheme1* – *Table 11: STM8AF526x/8x/Ax and STM8AF6269/8x/Ax pin description* replaced “STM8AF5286UC VQFPN32” with “STM8AF52x6 VQFPN32” at header row – *Section 10.2: Absolute maximum ratings* – *Section : Device marking on page 93* – *Section : Device marking on page 96* – *Section : Device marking on page 99* – *Section : Device marking on page 104* – *Section : Device marking on page 108* Added: – Footnote on *Figure 47: LQFP80 marking example (package top view)*, *Figure 50: LQFP64 marking example (package top view)*, *Figure 56: LQFP32 marking example (package top view)*, *Figure 59: VFQFPN32 marking example (package top view)*.
10-Nov-2016	15	Updated header row and PA6/USART_CK pin row on *Table 11: STM8AF526x/8x/Ax and STM8AF6269/8x/Ax pin description*.
