

Welcome to [E-XFL.COM](#)

What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

Applications of "[Embedded - Microcontrollers](#)"

Details

Product Status	Obsolete
Core Processor	dsPIC
Core Size	16-Bit
Speed	60 MIPS
Connectivity	CANbus, I ² C, IrDA, LINbus, SPI, UART/USART
Peripherals	Brown-out Detect/Reset, DMA, POR, PWM, WDT
Number of I/O	21
Program Memory Size	256KB (85.5K x 24)
Program Memory Type	FLASH
EEPROM Size	-
RAM Size	16K x 16
Voltage - Supply (Vcc/Vdd)	3V ~ 3.6V
Data Converters	A/D 6x10b/12b
Oscillator Type	Internal
Operating Temperature	-40°C ~ 150°C (TA)
Mounting Type	Surface Mount
Package / Case	28-SSOP (0.209", 5.30mm Width)
Supplier Device Package	28-SSOP
Purchase URL	https://www.e-xfl.com/product-detail/microchip-technology/dspic33ep256gp502-h-ss

17.1 QEI Resources

Many useful resources are provided on the main product page of the Microchip web site for the devices listed in this data sheet. This product page, which can be accessed using this link, contains the latest updates and additional information.

<p>Note: In the event you are not able to access the product page using the link above, enter this URL in your browser: http://www.microchip.com/wwwproducts/Devices.aspx?dDocName=en555464</p>

17.1.1 KEY RESOURCES

- “Quadrature Encoder Interface” (DS70601) in the *“dsPIC33/PIC24 Family Reference Manual”*
- Code Samples
- Application Notes
- Software Libraries
- Webinars
- All Related *“dsPIC33/PIC24 Family Reference Manual”* Sections
- Development Tools

19.0 INTER-INTEGRATED CIRCUIT™ (I²C™)

Note 1: This data sheet summarizes the features of the dsPIC33EPXXXGP50X, dsPIC33EPXXXMC20X/50X and PIC24EPXXXGP/MC20X families of devices. It is not intended to be a comprehensive reference source. To complement the information in this data sheet, refer to “Inter-Integrated Circuit™ (I²C™)” (DS70330) in the “dsPIC33/PIC24 Family Reference Manual”, which is available from the Microchip web site (www.microchip.com).

- 2: Some registers and associated bits described in this section may not be available on all devices. Refer to Section 4.0 “Memory Organization” in this data sheet for device-specific register and bit information.
- 3: There are minimum bit rates of approximately $F_{CY}/512$. As a result, high processor speeds may not support 100 Kbit/second operation. See timing specifications, IM10 and IM11, and the “Baud Rate Generator” in the “dsPIC33/PIC24 Family Reference Manual”.

The dsPIC33EPXXXGP50X, dsPIC33EPXXXMC20X/50X and PIC24EPXXXGP/MC20X family of devices contains two Inter-Integrated Circuit (I²C) modules: I2C1 and I2C2.

The I²C module provides complete hardware support for both Slave and Multi-Master modes of the I²C serial communication standard, with a 16-bit interface.

The I²C module has a 2-pin interface:

- The SCLx pin is clock
- The SDAx pin is data

The I²C module offers the following key features:

- I²C interface supporting both Master and Slave modes of operation
- I²C Slave mode supports 7 and 10-bit addressing
- I²C Master mode supports 7 and 10-bit addressing
- I²C port allows bidirectional transfers between master and slaves
- Serial clock synchronization for I²C port can be used as a handshake mechanism to suspend and resume serial transfer (SCLREL control)
- I²C supports multi-master operation, detects bus collision and arbitrates accordingly
- Intelligent Platform Management Interface (IPMI) support
- System Management Bus (SMBus) support

19.1 I²C Resources

Many useful resources are provided on the main product page of the Microchip web site for the devices listed in this data sheet. This product page, which can be accessed using this link, contains the latest updates and additional information.

<p>Note: In the event you are not able to access the product page using the link above, enter this URL in your browser: http://www.microchip.com/wwwproducts/Devices.aspx?dDocName=en555464</p>

20.1 UART Helpful Tips

1. In multi-node, direct-connect UART networks, UART receive inputs react to the complementary logic level defined by the URXINV bit (UxMODE<4>), which defines the Idle state, the default of which is logic high (i.e., URXINV = 0). Because remote devices do not initialize at the same time, it is likely that one of the devices, because the RX line is floating, will trigger a Start bit detection and will cause the first byte received, after the device has been initialized, to be invalid. To avoid this situation, the user should use a pull-up or pull-down resistor on the RX pin depending on the value of the URXINV bit.
 - a) If URXINV = 0, use a pull-up resistor on the RX pin.
 - b) If URXINV = 1, use a pull-down resistor on the RX pin.
2. The first character received on a wake-up from Sleep mode caused by activity on the UxRX pin of the UARTx module will be invalid. In Sleep mode, peripheral clocks are disabled. By the time the oscillator system has restarted and stabilized from Sleep mode, the baud rate bit sampling clock, relative to the incoming UxRX bit timing, is no longer synchronized, resulting in the first character being invalid; this is to be expected.

20.2 UART Resources

Many useful resources are provided on the main product page of the Microchip web site for the devices listed in this data sheet. This product page, which can be accessed using this link, contains the latest updates and additional information.

Note: In the event you are not able to access the product page using the link above, enter this URL in your browser:

REGISTER 20-1: UxMODE: UART x MODE REGISTER (CONTINUED)

bit 5	ABAUD: Auto-Baud Enable bit 1 = Enables baud rate measurement on the next character – requires reception of a Sync field (55h) before other data; cleared in hardware upon completion 0 = Baud rate measurement is disabled or completed
bit 4	URXINV: UARTx Receive Polarity Inversion bit 1 = UxRX Idle state is '0' 0 = UxRX Idle state is '1'
bit 3	BRGH: High Baud Rate Enable bit 1 = BRG generates 4 clocks per bit period (4x baud clock, High-Speed mode) 0 = BRG generates 16 clocks per bit period (16x baud clock, Standard mode)
bit 2-1	PDSEL<1:0>: Parity and Data Selection bits 11 = 9-bit data, no parity 10 = 8-bit data, odd parity 01 = 8-bit data, even parity 00 = 8-bit data, no parity
bit 0	STSEL: Stop Bit Selection bit 1 = Two Stop bits 0 = One Stop bit

- Note 1: Refer to the “UART” (DS70582) section in the “*dsPIC33/PIC24 Family Reference Manual*” for information on enabling the UARTx module for receive or transmit operation.
- 2: This feature is only available for the 16x BRG mode (BRGH = 0).
- 3: This feature is only available on 44-pin and 64-pin devices.
- 4: This feature is only available on 64-pin devices.

21.0 ENHANCED CAN (ECAN™) MODULE (dsPIC33EPXXXGP/ MC50X DEVICES ONLY)

Note 1: This data sheet summarizes the features of the dsPIC33EPXXXGP50X, dsPIC33EPXXXMC20X/50X and PIC24EPXXXGP/MC20X families of devices. It is not intended to be a comprehensive reference source. To complement the information in this data sheet, refer to “Enhanced Controller Area Network (ECAN™)” (DS70353) in the “dsPIC33/PIC24 Family Reference Manual”, which is available from the Microchip web site (www.microchip.com).

2: Some registers and associated bits described in this section may not be available on all devices. Refer to Section 4.0 “Memory Organization” in this data sheet for device-specific register and bit information.

21.1 Overview

The Enhanced Controller Area Network (ECAN) module is a serial interface, useful for communicating with other CAN modules or microcontroller devices. This interface/protocol was designed to allow communications within noisy environments. The dsPIC33EPXXXGP/MC50X devices contain one ECAN module.

The ECAN module is a communication controller implementing the CAN 2.0 A/B protocol, as defined in the BOSCH CAN specification. The module supports CAN 1.2, CAN 2.0A, CAN 2.0B Passive and CAN 2.0B Active versions of the protocol. The module implementation is a full CAN system. The CAN specification is not covered within this data sheet. The reader can refer to the BOSCH CAN specification for further details.

The ECAN module features are as follows:

- Implementation of the CAN protocol, CAN 1.2, CAN 2.0A and CAN 2.0B
- Standard and extended data frames
- 0-8 bytes data length
- Programmable bit rate up to 1 Mbit/sec
- Automatic response to remote transmission requests
- Up to eight transmit buffers with application specified prioritization and abort capability (each buffer can contain up to 8 bytes of data)
- Up to 32 receive buffers (each buffer can contain up to 8 bytes of data)
- Up to 16 full (Standard/Extended Identifier) acceptance filters
- Three full acceptance filter masks
- DeviceNet™ addressing support
- Programmable wake-up functionality with integrated low-pass filter
- Programmable Loopback mode supports self-test operation
- Signaling via interrupt capabilities for all CAN receiver and transmitter error states
- Programmable clock source
- Programmable link to Input Capture (IC2) module for time-stamping and network synchronization
- Low-power Sleep and Idle mode

The CAN bus module consists of a protocol engine and message buffering/control. The CAN protocol engine handles all functions for receiving and transmitting messages on the CAN bus. Messages are transmitted by first loading the appropriate data registers. Status and errors can be checked by reading the appropriate registers. Any message detected on the CAN bus is checked for errors and then matched against filters to see if it should be received and stored in one of the receive registers.

Microchip Technology Drawing No. C04-2153A

APPENDIX A: REVISION HISTORY

Revision A (April 2011)

This is the initial released version of the document.

Revision B (July 2011)

This revision includes minor typographical and formatting changes throughout the data sheet text.

All other major changes are referenced by their respective section in Table A-1.

TABLE A-1: MAJOR SECTION UPDATES

Section Name	Update Description
"High-Performance, 16-bit Digital Signal Controllers and Microcontrollers"	Changed all pin diagrams references of VLAP to TLA.
Section 4.0 "Memory Organization"	Updated the All Resets values for CLKDIV and PLLFBD in the System Control Register Map (see Table 4-35).
Section 5.0 "Flash Program Memory"	Updated "one word" to "two words" in the first paragraph of Section 5.2 "RTSP Operation" .
Section 9.0 "Oscillator Configuration"	<p>Updated the PLL Block Diagram (see Figure 9-2).</p> <p>Updated the Oscillator Mode, Fast RC Oscillator (FRC) with divide-by-N and PLL (FRCPLL), by changing (FRCDIVN + PLL) to (FRCPLL).</p> <p>Changed (FRCDIVN + PLL) to (FRCPLL) for COSC<2:0> = 001 and NOSC<2:0> = 001 in the Oscillator Control Register (see Register 9-1).</p> <p>Changed the POR value from 0 to 1 for the DOZE<1:0> bits, from 1 to 0 for the FRCDIV<0> bit, and from 0 to 1 for the PLLPOST<0> bit; Updated the default definitions for the DOZE<2:0> and FRCDIV<2:0> bits and updated all bit definitions for the PLLPOST<1:0> bits in the Clock Divisor Register (see Register 9-2).</p> <p>Changed the POR value from 0 to 1 for the PLLDIV<5:4> bits and updated the default definitions for all PLLDIV<8:0> bits in the PLL Feedback Division Register (see Register 9-2).</p>
Section 22.0 "Charge Time Measurement Unit (CTMU)"	Updated the bit definitions for the IRNG<1:0> bits in the CTMU Current Control Register (see Register 22-3).
Section 25.0 "Op amp/Comparator Module"	Updated the voltage reference block diagrams (see Figure 25-1 and Figure 25-2).

TABLE A-1: MAJOR SECTION UPDATES (CONTINUED)

Section Name	Update Description
Section 30.0 "Electrical Characteristics"	<p>Removed Voltage on VCAP with respect to Vss and added Note 5 in Absolute Maximum Ratings⁽¹⁾.</p> <p>Removed Parameter DC18 (V_{CORE}) and Note 3 from the DC Temperature and Voltage Specifications (see Table 30-4).</p> <p>Updated Note 1 in the DC Characteristics: Operating Current (I_{DD}) (see Table 30-6).</p> <p>Updated Note 1 in the DC Characteristics: Idle Current (I_{IDLE}) (see Table 30-7).</p> <p>Changed the Typical values for Parameters DC60a-DC60d and updated Note 1 in the DC Characteristics: Power-down Current (I_{PD}) (see Table 30-8).</p> <p>Updated Note 1 in the DC Characteristics: Doze Current (I_{DOZE}) (see Table 30-9).</p> <p>Updated Note 2 in the Electrical Characteristics: BOR (see Table 30-12).</p> <p>Updated Parameters CM20 and CM31, and added Parameters CM44 and CM45 in the AC/DC Characteristics: Op amp/Comparator (see Table 30-14).</p> <p>Added the Op amp/Comparator Reference Voltage Settling Time Specifications (see Table 30-15).</p> <p>Added Op amp/Comparator Voltage Reference DC Specifications (see Table 30-16).</p> <p>Updated Internal FRC Accuracy Parameter F20a (see Table 30-21).</p> <p>Updated the Typical value and Units for Parameter CTMUI1, and added Parameters CTMUI4, CTMUFV1, and CTMUFV2 to the CTMU Current Source Specifications (see Table 30-55).</p>
Section 31.0 "Packaging Information"	Updated packages by replacing references of VLAP with TLA.
"Product Identification System"	Changed VLAP to TLA.

Overview	287	Symbols Used in Opcode Descriptions	388
Resources	289	Inter-Integrated Circuit (I ² C)	273
Electrical Characteristics	401	Control Registers	276
AC	413, 471	Resources	275
Enhanced CAN (ECAN) Module	287	Internal RC Oscillator	
Equations		Use with WDT	385
Device Operating Frequency	154	Internet Address	524
FPLLO Calculation	154	Interrupt Controller	
FVCO Calculation	154	Control and Status Registers	131
Errata	23	INTCON1	131
F		INTCON2	131
Filter Capacitor (CEFC) Specifications	403	INTCON3	131
Flash Program Memory	119	INTCON4	131
Control Registers	120	INTTREG	131
Programming Operations	120	Interrupt Vector Details	129
Resources	120	Interrupt Vector Table (IVT)	127
RTSP Operation	120	Reset Sequence	127
Table Instructions	119	Resources	131
Flexible Configuration	379	J	
G		JTAG Boundary Scan Interface	379
Guidelines for Getting Started	29	JTAG Interface	386
Application Examples	32	M	
Basic Connection Requirements	29	Memory Maps	
CPU Logic Filter Capacitor Connection (VCAP)	30	Extended Data Space	109
Decoupling Capacitors	29	Memory Organization	45
External Oscillator Pins	31	Resources	62
ICSP Pins	31	Microchip Internet Web Site	524
Master Clear (MCLR) Pin	30	Modulo Addressing	114
Oscillator Value Conditions on Start-up	32	Applicability	115
Unused I/Os	32	Operation Example	114
H		Start and End Address	114
High-Speed PWM	225	W Address Register Selection	114
Control Registers	230	MPLAB Assembler, Linker, Librarian	398
Faults	225	MPLAB ICD 3 In-Circuit Debugger	399
Resources	229	MPLAB PM3 Device Programmer	399
High-Temperature Electrical Characteristics	467	MPLAB REAL ICE In-Circuit Emulator System	399
Absolute Maximum Ratings	467	MPLAB X Integrated Development	
I		Environment Software	397
I/O Ports	173	MPLAB X SIM Software Simulator	399
Helpful Tips	181	MPLIB Object Librarian	398
Parallel I/O (PIO)	173	MPLINK Object Linker	398
Resources	182	O	
Write/Read Timing	174	Op Amp	
In-Circuit Debugger	386	Application Considerations	358
In-Circuit Emulation	379	Configuration A	358
In-Circuit Serial Programming (ICSP)	379, 386	Configuration B	359
Input Capture	213	Op Amp/Comparator	355
Control Registers	215	Control Registers	360
Resources	214	Resources	359
Input Change Notification (ICN)	174	Open-Drain Configuration	174
Instruction Addressing Modes	112	Oscillator	
File Register Instructions	112	Control Registers	156
Fundamental Modes Supported	112	Resources	155
MAC Instructions	113	Output Compare	219
MCU Instructions	112	Control Registers	221
Move and Accumulator Instructions	113	Resources	220
Other Instructions	113
