

Welcome to [E-XFL.COM](#)

### What is "[Embedded - Microcontrollers](#)"?

"[Embedded - Microcontrollers](#)" refer to small, integrated circuits designed to perform specific tasks within larger systems. These microcontrollers are essentially compact computers on a single chip, containing a processor core, memory, and programmable input/output peripherals. They are called "embedded" because they are embedded within electronic devices to control various functions, rather than serving as standalone computers. Microcontrollers are crucial in modern electronics, providing the intelligence and control needed for a wide range of applications.

### Applications of "[Embedded - Microcontrollers](#)"

#### Details

|                            |   |
|----------------------------|---|
| Product Status             | Active  |
| Core Processor             | dsPIC   |
| Core Size                  | 16-Bit  |
| Speed                      | 70 MIPS   |
| Connectivity               | CANbus, I <sup>2</sup> C, IrDA, LINbus, SPI, UART/USART   |
| Peripherals                | Brown-out Detect/Reset, DMA, POR, PWM, WDT  |
| Number of I/O              | 53  |
| Program Memory Size        | 512KB (170K x 24)   |
| Program Memory Type        | FLASH   |
| EEPROM Size                | -   |
| RAM Size                   | 24K x 16  |
| Voltage - Supply (Vcc/Vdd) | 3V ~ 3.6V   |
| Data Converters            | A/D 16x10b/12b  |
| Oscillator Type            | Internal  |
| Operating Temperature      | -40°C ~ 85°C (TA)   |
| Mounting Type              | Surface Mount   |
| Package / Case             | 64-VFQFN Exposed Pad  |
| Supplier Device Package    | 64-VQFN (9x9)   |
| Purchase URL               | <a href="https://www.e-xfl.com/product-detail/microchip-technology/dspic33ep512gp506t-i-mr">https://www.e-xfl.com/product-detail/microchip-technology/dspic33ep512gp506t-i-mr</a> |

**TABLE 2: dsPIC33EPXXXMC20X/50X and PIC24EPXXXMC20X MOTOR CONTROL FAMILIES**

| Device            | Page Erase Size (Instructions) | Program Flash Memory (Kbytes) | RAM (Kbytes) | Remappable Peripherals |               |                |   |                              |      |                    |                  | i <sup>2</sup> C™ | CRC Generator | 10-Bit/12-Bit ADC (Channels) | Op Amps/Comparators | CTMU               | PTG | I/O Pins | Pins | Packages |  |

- Note 1:** On 28-pin devices, Comparator 4 does not have external connections. Refer to **Section 25.0 “Op Amp/Comparator Module”** for details.  
**2:** Only SPI2 is remappable.  
**3:** INTO is not remappable.  
**4:** Only the PWM Faults are remappable.  
**5:** The SSOP and VTLA packages are not available for devices with 512 Kbytes of memory.

Pin Diagrams (Continued)

44-Pin QFN<sup>(1,2,3)</sup>

■ = Pins are up to 5V tolerant

- Note 1:** The RPN/RPI pins can be used by any remappable peripheral with some limitation. See **Section 11.4 “Peripheral Pin Select (PPS)”** for available peripherals and for information on limitations.
- Note 2:** Every I/O port pin (RAX-RGx) can be used as a Change Notification pin (CNAX-CNGx). See **Section 11.0 “I/O Ports”** for more information.
- Note 3:** The metal pad at the bottom of the device is not connected to any pins and is recommended to be connected to Vss externally.
- Note 4:** There is an internal pull-up resistor connected to the TMS pin when the JTAG interface is active. See the JTAGEN bit field in Table 27-2.

## 6.1 Reset Resources

Many useful resources are provided on the main product page of the Microchip web site for the devices listed in this data sheet. This product page, which can be accessed using this link, contains the latest updates and additional information.

**Note:** In the event you are not able to access the product page using the link above, enter this URL in your browser:  
<http://www.microchip.com/wwwproducts/Devices.aspx?dDocName=en555464>

### 6.1.1 KEY RESOURCES

- “Reset” (DS70602) in the “*dsPIC33/PIC24 Family Reference Manual*”
- Code Samples
- Application Notes
- Software Libraries
- Webinars
- All Related “*dsPIC33/PIC24 Family Reference Manual*” Sections
- Development Tools

## 18.0 SERIAL PERIPHERAL INTERFACE (SPI)

**Note 1:** This data sheet summarizes the features of the dsPIC33EPXXXGP50X, dsPIC33EPXXXMC20X/50X and PIC24EPXXXGP/MC20X families of devices. It is not intended to be a comprehensive reference source. To complement the information in this data sheet, refer to “**Serial Peripheral Interface (SPI)**” (DS70569) in the “*dsPIC33/PIC24 Family Reference Manual*”, which is available from the Microchip web site ([www.microchip.com](http://www.microchip.com)).

**2:** Some registers and associated bits described in this section may not be available on all devices. Refer to **Section 4.0 “Memory Organization”** in this data sheet for device-specific register and bit information.

The SPI module is a synchronous serial interface, useful for communicating with other peripheral or microcontroller devices. These peripheral devices can be serial EEPROMs, shift registers, display drivers, ADC Converters, etc. The SPI module is compatible with Motorola® SPI and SIOP interfaces.

The dsPIC33EPXXXGP50X, dsPIC33EPXXXMC20X/50X and PIC24EPXXXGP/MC20X device family offers two SPI modules on a single device. These modules, which are designated as SPI1 and SPI2, are functionally identical. Each SPI module includes an eight-word FIFO buffer and allows DMA bus connections. When using the SPI module with DMA, FIFO operation can be disabled.

**Note:** In this section, the SPI modules are referred to together as SPIx, or separately as SPI1 and SPI2. Special Function Registers follow a similar notation. For example, SPIxCON refers to the control register for the SPI1 and SPI2 modules.

The SPI1 module uses dedicated pins which allow for a higher speed when using SPI1. The SPI2 module takes advantage of the Peripheral Pin Select (PPS) feature to allow for greater flexibility in pin configuration of the SPI2 module, but results in a lower maximum speed for SPI2. See **Section 30.0 “Electrical Characteristics”** for more information.

The SPIx serial interface consists of four pins, as follows:

- SDIx: Serial Data Input
- SDOx: Serial Data Output
- SCKx: Shift Clock Input or Output
- SSx/FSYNCx: Active-Low Slave Select or Frame Synchronization I/O Pulse

The SPIx module can be configured to operate with two, three or four pins. In 3-pin mode, SSx is not used. In 2-pin mode, neither SDOx nor SSx is used.

Figure 18-1 illustrates the block diagram of the SPIx module in Standard and Enhanced modes.

## 23.0 10-BIT/12-BIT ANALOG-TO-DIGITAL CONVERTER (ADC)

**Note 1:** This data sheet summarizes the features of the dsPIC33EPXXXGP50X, dsPIC33EPXXXMC20X/50X and PIC24EPXXXGP/MC20X families of devices. It is not intended to be a comprehensive reference source. To complement the information in this data sheet, refer to “**Analog-to-Digital Converter (ADC)**” (DS70621) in the “*dsPIC33/PIC24 Family Reference Manual*”, which is available from the Microchip web site ([www.microchip.com](http://www.microchip.com)).

**2:** Some registers and associated bits described in this section may not be available on all devices. Refer to **Section 4.0 “Memory Organization”** in this data sheet for device-specific register and bit information.

The dsPIC33EPXXXGP50X, dsPIC33EPXXXMC20X/50X and PIC24EPXXXGP/MC20X devices have one ADC module. The ADC module supports up to 16 analog input channels.

On ADC1, the AD12B bit (AD1CON1<10>) allows the ADC module to be configured by the user as either a 10-bit, 4 Sample-and-Hold (S&H) ADC (default configuration) or a 12-bit, 1 S&H ADC.

**Note:** The ADC module needs to be disabled before modifying the AD12B bit.

## 23.1 Key Features

### 23.1.1 10-BIT ADC CONFIGURATION

The 10-bit ADC configuration has the following key features:

- Successive Approximation (SAR) conversion
- Conversion speeds of up to 1.1 Msps
- Up to 16 analog input pins
- Connections to three internal op amps
- Connections to the Charge Time Measurement Unit (CTMU) and temperature measurement diode
- Channel selection and triggering can be controlled by the Peripheral Trigger Generator (PTG)
- External voltage reference input pins
- Simultaneous sampling of:
  - Up to four analog input pins
  - Three op amp outputs
  - Combinations of analog inputs and op amp outputs
- Automatic Channel Scan mode
- Selectable conversion Trigger source
- Selectable Buffer Fill modes
- Four result alignment options (signed/unsigned, fractional/integer)
- Operation during CPU Sleep and Idle modes

### 23.1.2 12-BIT ADC CONFIGURATION

The 12-bit ADC configuration supports all the features listed above, with the exception of the following:

- In the 12-bit configuration, conversion speeds of up to 500 ksps are supported
- There is only one S&H amplifier in the 12-bit configuration; therefore, simultaneous sampling of multiple channels is not supported.

Depending on the particular device pinout, the ADC can have up to 16 analog input pins, designated AN0 through AN15. These analog inputs are shared with op amp inputs and outputs, comparator inputs, and external voltage references. When op amp/comparator functionality is enabled, or an external voltage reference is used, the analog input that shares that pin is no longer available. The actual number of analog input pins, op amps and external voltage reference input configuration depends on the specific device.

A block diagram of the ADC module is shown in Figure 23-1. Figure 23-2 provides a diagram of the ADC conversion clock period.

**REGISTER 23-2: AD1CON2: ADC1 CONTROL REGISTER 2 (CONTINUED)**

- bit 1      **BUFM:** Buffer Fill Mode Select bit  
1 = Starts the buffer filling the first half of the buffer on the first interrupt and the second half of the buffer on next interrupt  
0 = Always starts filling the buffer from the start address.
- bit 0      **ALTS:** Alternate Input Sample Mode Select bit  
1 = Uses channel input selects for Sample MUXA on first sample and Sample MUXB on next sample  
0 = Always uses channel input selects for Sample MUXA

TABLE 24-1: PTG STEP COMMAND FORMAT (CONTINUED)

| bit 3-0 | Step Command           | OPTION<3:0>  | Option Description   |

| bit 7 |     |     |       |       |       |       | bit 0 |

**Legend:**

|                   |                  |  |
|-------------------|------------------|--|
| R = Readable bit  | W = Writable bit | U = Unimplemented bit, read as '0'           |
| -n = Value at POR | '1' = Bit is set | '0' = Bit is cleared      x = Bit is unknown |

- bit 15-13      **Unimplemented:** Read as '0'
- bit 12-8      **DWIDTH<4:0>:** Data Width Select bits  
These bits set the width of the data word (DWIDTH<4:0> + 1).
- bit 7-5        **Unimplemented:** Read as '0'
- bit 4-0        **PLEN<4:0>:** Polynomial Length Select bits  
These bits set the length of the polynomial (Polynomial Length = PLEN<4:0> + 1).

## 28.0 INSTRUCTION SET SUMMARY

**Note:** This data sheet summarizes the features of the dsPIC33EPXXXGP50X, dsPIC33EPXXXMC20X/50X and PIC24EPXXXGP/MC20X families of devices. It is not intended to be a comprehensive reference source. To complement the information in this data sheet, refer to the related section of the “dsPIC33/PIC24 Family Reference Manual”, which is available from the Microchip web site ([www.microchip.com](http://www.microchip.com)).

The dsPIC33EP instruction set is almost identical to that of the dsPIC30F and dsPIC33F. The PIC24EP instruction set is almost identical to that of the PIC24F and PIC24H.

Most instructions are a single program memory word (24 bits). Only three instructions require two program memory locations.

Each single-word instruction is a 24-bit word, divided into an 8-bit opcode, which specifies the instruction type and one or more operands, which further specify the operation of the instruction.

The instruction set is highly orthogonal and is grouped into five basic categories:

- Word or byte-oriented operations
- Bit-oriented operations
- Literal operations
- DSP operations
- Control operations

Table 28-1 lists the general symbols used in describing the instructions.

The dsPIC33E instruction set summary in Table 28-2 lists all the instructions, along with the status flags affected by each instruction.

Most word or byte-oriented W register instructions (including barrel shift instructions) have three operands:

- The first source operand, which is typically a register ‘Wb’ without any address modifier
- The second source operand, which is typically a register ‘Ws’ with or without an address modifier
- The destination of the result, which is typically a register ‘Wd’ with or without an address modifier

However, word or byte-oriented file register instructions have two operands:

- The file register specified by the value ‘f’
- The destination, which could be either the file register ‘f’ or the W0 register, which is denoted as ‘WREG’

Most bit-oriented instructions (including simple rotate/shift instructions) have two operands:

- The W register (with or without an address modifier) or file register (specified by the value of ‘Ws’ or ‘f’)
- The bit in the W register or file register (specified by a literal value or indirectly by the contents of register ‘Wb’)

The literal instructions that involve data movement can use some of the following operands:

- A literal value to be loaded into a W register or file register (specified by ‘k’)
- The W register or file register where the literal value is to be loaded (specified by ‘Wb’ or ‘f’)

However, literal instructions that involve arithmetic or logical operations use some of the following operands:

- The first source operand, which is a register ‘Wb’ without any address modifier
- The second source operand, which is a literal value
- The destination of the result (only if not the same as the first source operand), which is typically a register ‘Wd’ with or without an address modifier

The MAC class of DSP instructions can use some of the following operands:

- The accumulator (A or B) to be used (required operand)
- The W registers to be used as the two operands
- The X and Y address space prefetch operations
- The X and Y address space prefetch destinations
- The accumulator write back destination

The other DSP instructions do not involve any multiplication and can include:

- The accumulator to be used (required)
- The source or destination operand (designated as Wso or Wdo, respectively) with or without an address modifier
- The amount of shift specified by a W register ‘Wn’ or a literal value

The control instructions can use some of the following operands:

- A program memory address
- The mode of the Table Read and Table Write instructions

TABLE 28-2: INSTRUCTION SET OVERVIEW

| Base Instr # | Assembly Mnemonic | Assembly Syntax             | Description                              | # of Words | # of Cycles <sup>(2)</sup> | Status Flags Affected |
|--------------|-------------------|-----------------------------|--|------------|----------------------------|-----------------------|
| 1            | ADD               | ADD Acc <sup>(1)</sup>      | Add Accumulators                         | 1          | 1                          | OA,OB,SA,SB           |

| 7            | BSET              | BSET f, #bit4               | Bit Set f                                | 1          | 1                          | None                  |
|              |                   | BSET Ws, #bit4              | Bit Set Ws                               | 1          | 1                          | None                  |
| 8            | BSW               | BSW.C Ws, Wb                | Write C bit to Ws<Wb>                    | 1          | 1                          | None                  |
|              |                   | BSW.Z Ws, Wb                | Write Z bit to Ws<Wb>                    | 1          | 1                          | None                  |

Note 1: These instructions are available in dsPIC33EPXXXMC20X/50X and PIC24EPXXXMC20X devices only.

Note 2: Read and Read-Modify-Write (e.g., bit operations and logical operations) on non-CPU SFRs incur an additional instruction cycle.

### 30.0 ELECTRICAL CHARACTERISTICS

This section provides an overview of dsPIC33EPXXXGP50X, dsPIC33EPXXXMC20X/50X and PIC24EPXXXGP/MC20X electrical characteristics. Additional information will be provided in future revisions of this document as it becomes available.

Absolute maximum ratings for the dsPIC33EPXXXGP50X, dsPIC33EPXXXMC20X/50X and PIC24EPXXXGP/MC20X family are listed below. Exposure to these maximum rating conditions for extended periods may affect device reliability. Functional operation of the device at these or any other conditions above the parameters indicated in the operation listings of this specification is not implied.

#### Absolute Maximum Ratings<sup>(1)</sup>

|   |                       |
|---|-----------------------|
| Ambient temperature under bias .....  | -40°C to +125°C       |
| Storage temperature .....   | -65°C to +150°C       |
| Voltage on VDD with respect to VSS .....  | -0.3V to +4.0V        |
| Voltage on any pin that is not 5V tolerant, with respect to VSS <sup>(3)</sup> .....    | -0.3V to (VDD + 0.3V) |
| Voltage on any 5V tolerant pin with respect to VSS when VDD ≥ 3.0V <sup>(3)</sup> ..... | -0.3V to +5.5V        |
| Voltage on any 5V tolerant pin with respect to VSS when VDD < 3.0V <sup>(3)</sup> ..... | -0.3V to +3.6V        |
| Maximum current out of VSS pin .....  | 300 mA                |
| Maximum current into VDD pin <sup>(2)</sup> .....                                       | 300 mA                |
| Maximum current sunk/sourced by any 4x I/O pin .....                                    | 15 mA                 |
| Maximum current sunk/sourced by any 8x I/O pin .....                                    | 25 mA                 |
| Maximum current sunk by all ports <sup>(2,4)</sup> .....                                | 200 mA                |

**Note 1:** Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only, and functional operation of the device at those or any other conditions above those indicated in the operation listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

**2:** Maximum allowable current is a function of device maximum power dissipation (see Table 30-2).

**3:** See the “Pin Diagrams” section for the 5V tolerant pins.

**4:** Exceptions are: dsPIC33EPXXXGP502, dsPIC33EPXXXMC202/502 and PIC24EPXXXGP/MC202 devices, which have a maximum sink/source capability of 130 mA.

**TABLE 30-18: PLL CLOCK TIMING SPECIFICATIONS**

| AC CHARACTERISTICS |        |   | Standard Operating Conditions: 3.0V to 3.6V<br>(unless otherwise stated)<br>Operating temperature -40°C ≤ TA ≤ +85°C for Industrial<br>-40°C ≤ TA ≤ +125°C for Extended |                     |      |       |                    |
|--------------------|--------|---|---|---------------------|------|-------|--------------------|
| Param No.          | Symbol | Characteristic  | Min.  | Typ. <sup>(1)</sup> | Max. | Units | Conditions         |
| OS50               | FPLLI  | PLL Voltage Controlled Oscillator (VCO) Input Frequency Range | 0.8   | —                   | 8.0  | MHz   | ECPLL, XTPLL modes |
| OS51               | FVCO   | On-Chip VCO System Frequency                                  | 120   | —                   | 340  | MHz   |                    |
| OS52               | TLOCK  | PLL Start-up Time (Lock Time)                                 | 0.9   | 1.5                 | 3.1  | ms    |                    |
| OS53               | DCLK   | CLKO Stability (Jitter) <sup>(2)</sup>                        | -3  | 0.5                 | 3    | %     |                    |

- Note 1:** Data in “Typical” column is at 3.3V, +25°C unless otherwise stated. Parameters are for design guidance only and are not tested.
- 2:** This jitter specification is based on clock cycle-by-clock cycle measurements. To get the effective jitter for individual time bases, or communication clocks used by the application, use the following formula:

$$Effective\ Jitter = \frac{DCLK}{\sqrt{\frac{FOSC}{Time\ Base\ or\ Communication\ Clock}}}$$

For example, if Fosc = 120 MHz and the SPIx bit rate = 10 MHz, the effective jitter is as follows:

$$Effective\ Jitter = \frac{DCLK}{\sqrt{\frac{120}{10}}} = \frac{DCLK}{\sqrt{12}} = \frac{DCLK}{3.464}$$

**TABLE 30-19: INTERNAL FRC ACCURACY**

| AC CHARACTERISTICS  |                | Standard Operating Conditions: 3.0V to 3.6V (unless otherwise stated)<br>Operating temperature -40°C ≤ TA ≤ +85°C for Industrial<br>-40°C ≤ TA ≤ +125°C for Extended |      |      |       |                     |                |
|---|----------------|--|------|------|-------|---------------------|----------------|
| Param No.   | Characteristic | Min.   | Typ. | Max. | Units | Conditions          |                |
| <b>Internal FRC Accuracy @ FRC Frequency = 7.37 MHz<sup>(1)</sup></b> |                |  |      |      |       |                     |                |
| F20a  | FRC            | -1.5   | 0.5  | +1.5 | %     | -40°C ≤ TA ≤ -10°C  | VDD = 3.0-3.6V |
|   |                | -1   | 0.5  | +1   | %     | -10°C ≤ TA ≤ +85°C  | VDD = 3.0-3.6V |
| F20b  | FRC            | -2   | 1    | +2   | %     | +85°C ≤ TA ≤ +125°C | VDD = 3.0-3.6V |

- Note 1:** Frequency is calibrated at +25°C and 3.3V. TUNx bits can be used to compensate for temperature drift.

**TABLE 30-20: INTERNAL LPRC ACCURACY**

| AC CHARACTERISTICS                     |                | Standard Operating Conditions: 3.0V to 3.6V (unless otherwise stated)<br>Operating temperature -40°C ≤ TA ≤ +85°C for Industrial<br>-40°C ≤ TA ≤ +125°C for Extended |      |      |       |                     |                |
|--|----------------|--|------|------|-------|---------------------|----------------|
| Param No.                              | Characteristic | Min.   | Typ. | Max. | Units | Conditions          |                |
| <b>LPRC @ 32.768 kHz<sup>(1)</sup></b> |                |  |      |      |       |                     |                |
| F21a                                   | LPRC           | -30  | —    | +30  | %     | -40°C ≤ TA ≤ -10°C  | VDD = 3.0-3.6V |
|  |                | -20  | —    | +20  | %     | -10°C ≤ TA ≤ +85°C  | VDD = 3.0-3.6V |
| F21b                                   | LPRC           | -30  | —    | +30  | %     | +85°C ≤ TA ≤ +125°C | VDD = 3.0-3.6V |

- Note 1:** The change of LPRC frequency as VDD changes.
